South China Sea Affirmative
Plan Text - SCS

The United States Federal Government should substantially increase its air and sea deployment and increase its freedom of navigation operations in the East China Sea and South China Sea
**Inherency - SCS**

**US presence in East Asia is insufficient now**

Michael Auslin, September 22, 2015, Time for realism in US-China relations, American Enterprise Institute, Michael Auslin is a resident scholar and the director of Japan Studies at the American Enterprise Institute (AEI), where he specializes in Asian regional security and political issues., https://www.aei.org/publication/time-for-realism-in-us-china-relations/

In addition, it is past time for the U.S. to act as the guarantor of regional stability that it claims to be. That means sending U.S. ships and planes right up to the edges of China’s manmade islands in the South China Sea, something that Obama Administration admitted in Senate testimony last week that it was not doing. By not challenging China’s territorial claims we are in essence confirming them, and sending a message of political weakness to our allies in Asia. A China that knows we will employ our military strength where it is most in question will be far more circumspect in its attempts to undermine the rules of international behavior.
Inherency - SCS

Current Freedom of Navigation Operations are insufficient

MATTHEW Pennington, Apr. 27, 2016, Lawmaker urge more US naval operations in South China Sea, Associated Press, Matthew Pennington is Reporter, Asia-US Affairs at Associated Press based out of Washington DC, hosted2.ap.org/APDEFAULT/cae69a7523db45408eeb2b3a98c0c9c5/Article_2016-04-27-US--United%20States-China/id-f4c0f6c008c4ff1802a4514eeea131

Republicans said such “freedom of navigation” operations cruising within 12 nautical miles of the manmade islands — what China might consider as their territorial waters — should become routine. “I don’t know why we are not doing it weekly, or monthly,” said the committee chairman, GOP Sen. Bob Corker of Tennessee, noting the U.S. has about 60 percent of its naval vessels in the Pacific region. Republican Sen. Cory Gardner of Colorado said sending U.S. ships into the area every three months "is simply insufficient to send a strong message to China." Corker contended that China has positioned itself as a geopolitical rival of the United States. "Merely managing differences with China is not a successful formula particularly when such management cedes U.S. influence and places American interest at risk in the Indo-Pacific and beyond," Corker said. Blinken agreed with Sen. Marco Rubio of Florida that China’s objective was control of the entire South China Sea. Blinken said China was alienating its neighbors and risked "conflict, instability and isolation" unless it changed its approach and clarified its claims in accordance with international law. "As long as the United States remains fully present in the region, any tactical advantage that China derives from some of these outposts will be vastly outweighed by the net effect of surrounding itself with increasingly angry, increasingly suspicious neighbors who are increasingly close to the United States," he said. But Democratic Sen. Robert Menendez of New Jersey said that China was “dominating” the region. He advocated a tougher U.S. stance, saying American instruments of national power "are only useful when they are fully deployed." China claims virtually the entire South China Sea, an area that contains some of the world’s busiest sea lanes. Although the U.S. is not a claimant, it says it has a national interest in freedom of navigation and maintaining stability there.
Hegemony Advantage - SCS

Uniqueness

Inaction is killing US hegemony in Asia

Joseph Bosco, June 03, 2015, US Must Hold Firm in South China Sea Dispute, The Diplomat, Joseph A. Bosco, national security consultant, retired in 2010 from the Office of the Secretary of Defense (OSD), where his portfolios over a seven-year period included strategic communications and Muslim outreach, East Asia security affairs, Iraq and Afghanistan coalition affairs, and disaster relief and humanitarian affairs, among other assignments, thediplomat.com/2015/06/us-must-hold-firm-in-south-china-sea-dispute/

In the unfolding crisis in the SCS, however, the U.S. no longer has the option to look away. As Defense Secretary Ashton Carter declared at the Shangri-La defense ministers’ meeting last week, the United States has a direct and enduring interest in freedom of navigation and overflight in all international waters and airspace. Beyond self-interest, America has kept the maritime and aviation public commons open to all nations for more than seven decades. Allowing China unilaterally to carve out a gigantic exception to Washington’s global role in the vital SCS shipping lanes would constitute an incalculable diminution of U.S. power and prestige.
We are in the midst of an intensifying competition in Asia. The main driver of this competition is an ever-more powerful China determined to set the rules of engagement around its vast periphery. The South China Sea is the locus of rivalry. In seeking to expand its influence in Southeast Asia, China may well believe it is simply reclaiming its historic position as the dominant regional power. It may also think that its actions are defensive, designed to protect its security, access to resources, and vital sea lines of communication. But it realizes that the post World War II order largely built by the United States still obstructs this objective. Thus, many Chinese hope to displace the United States while gradually dominating its neighbors in a manner unlikely to trigger any decisive or timely response. This is effectively Chinese regional hegemony in slow motion. In Washington, too often the urgent crowds out the important. If we wait for the important changes presently underway in Southeast Asia to develop on their current trajectory, the United States and its allies and partners will soon not only lose substantial leverage over the rules and norms of behavior in this region but also may well face larger security risks in the future.
Hegemony Advantage - SCS

Internal Link

Lack of US action leads to more island building and results in regional instability. The longer the US waits the more serious our actions to stop China will have to be.

Nations work out their differences through consistent and credible interactions. Exercises and real-world operations allow states to define their interests and then defend them. Competitor nations take these opportunities to test the will of states they are challenging. The consistency of these activities allows tensions between states to be released at a constant rate, so that pressures never rise to dangerous levels. But when a nation vacates the arena of competition for too long or fails to conduct credible exercises, as the United States has done in the Western Pacific over the past five years, strains begin to warp the fabric of the international order. China’s construction of artificial islands as a means of extending its claims of sovereignty over the South China Sea have left the United States with few options. The U.S. can continue its policy of sending mixed messages, dispatching individual warships on “innocent-passage” profiles that come within twelve miles of the islands while avoiding normal military operations, but this will only play into China’s plan to slowly boil the frog as it continues arming the islands, establishing a new security status quo in the region. China’s strategy mirrors Russia’s actions in Georgia, the Crimea, and Ukraine. There, Russian forces operated below the U.S.’s radar, conducting phase I and II operations and standing pat in the face of international sanctions, confident that neither the United States nor its NATO allies really wanted to risk war to re-institute the regional order that had just been upended. China clearly feels that time is on its side so long as it only incrementally expands its influence, avoiding direct confrontation with the United States. Such an approach will, of course, leave the United States no choice but to suddenly and directly confront China at some critical point in the future.

America’s adherence to its founding principles of free navigation and free trade, not to mention its belief in a free sea, will not allow it to tolerate a Chinese assertion of sovereignty over such a large swath of heretofore-open water. Perhaps when the time comes the United States could simply land an international force of marines on one of the artificial islands as part of an amphibious exercise. As the islands are not Chinese sovereign territory, there is no reason not to use them as the staging ground for an international exercise. And such an exercise would force China’s hand, making it choose between resisting the assembled international marines with armed force or acknowledging the illegitimacy of its own claims. While some might view such American action as too confrontational, it was made necessary by the Obama administration’s failure to nip China’s ambitions in the bud. America will now have to skip a phase, taking strong and abrupt action to reset the status quo. As things stand, should China suddenly move to militarize the Scarborough Shoals just off of the Philippines, it is unclear if the United States would defend its ally, in keeping with its treaty commitments, or simply dispatch Secretary of State John Kerry to insist on one thing while his bosses’ actions demonstrate the opposite. Such continuous, systematic acts of accommodation as have been demonstrated with Iran, Syria, and Russia invite conflict and ultimately lead to large-scale major war. Maintenance of a strong military and the upholding of our founding core principles remain the surest guarantee of peace.
Hegemony Advantage - SCS

Absent increased American naval intervention, island building leads to an escalatory regional war which draws in the US

An increasingly militarized land and sea grab continues despite calls for peaceful resolution. With the U.S. in full Asian tilt, the South China Sea dispute is shaping up to be the first major test of its Pacific re-engagement. What the U.S. Can or should do remains woefully undefined. There is no longer any question that as the power vacuum expands, force, not the power of the pen defines boundaries. Beijing increasingly asserts its claims within a map of its own making while a troubling and influential undercurrent gathers momentum. China now claims the entire South China Sea, brushing the shores of its neighbors and flying in the face of international norms. Call it the conventional “first-strike” option supported by influential Chinese think tanks and the popular state-controlled press—quick and decisive military engagement to convince Vietnam and the Philippines to back down. It worked in China’s favor during a 1974 stand-off over the Paracel Islands. Enter the U.S., seen by many as a natural hedge against excessive Chinese influence. The State Department issued a lukewarm statement on the South China Sea urging all parties to find a peaceful solution to the impasse. Senator McCain called China’s moves “provocative.” Beyond routine drills and port calls with the Philippines, Vietnam and India the U.S. has taken a decidedly cautious approach. Peaceful resolution of territorial claims and a unified Southeast Asian response, not a military confrontation with China, remains a core U.S. foreign policy objective. That may be increasingly difficult to achieve as China presses its claims, recently “escorting” an Indian naval flotilla from its port call with Vietnam and hauling it with “welcome to Chinese waters.” In June Philippine President Aquino sought reassurance that U.S. defense obligations would kick-in should they be attacked. The U.S. refused to take sides in the territorial dispute, a long standing policy, but reaffirmed its commitment to the bilateral Mutual Defense Treaty. At a minimum this entails immediate consultations should hostilities break out. It does not, however mean automatic military action. Even interest from the rest of Southeast Asia for greater U.S. engagement remains tentative. Vietnam continues joint exercises with China, keen to maintain balance with its main trading partner to the north. Non-claimant states including Thailand, Singapore, Cambodia, Indonesia and Laos have shown no interest in “taking sides”, though U.S. engagement is certainly welcome. For its part China has been quick to use trade retaliation including a sudden technical hold on Philippine fruit imports. If history is any guide the unintended consequences of even a limited military skirmish may prove hard to control. The situation remains even more volatile with a leadership transition underway in Beijing as nationalistic and even jingoistic tendencies rise throughout the country. Appeasement also has its discontents. This is the fine line the U.S. must tread. There are no signs that the cycle of provocation and push-back will end any time soon. It should be no surprise if boat ramming incidents between fishing vessels and cutters eventually turn more confrontational. Perhaps the greatest U.S. influence will be containing any escalation by its presence alone, helping to thwart the notion that China can launch a limited attack on its neighbors without consequences. Despite China’s preference the U.S. can and will remain a Pacific power, guarantor of the common interest, strengthening cooperation among parties, and routinely testing free access to international waters.
Hegemony Advantage - SCS

Impact

Asian instability leads to nuclear war – many scenarios

The decision to go to Asia is one that all thinking Americans can and should support regardless of either party or ideological affiliation. East and South Asia are the places where the 21st century, for better or for worse, will most likely be shaped; economic growth, environmental progress, the destiny of democracy and success against terror are all at stake here. American objectives in this region are clear. While convincing China that its best interests are not served by a rash, Kaiser Wilhelm-like dash for supremacy in the region, the US does not want either to isolate or contain China. We want a strong, rich, open and free China in an Asia that is also strong, rich, open and free. Our destiny is inextricably linked with Asia’s; Asian success will make America stronger, richer and more secure. Asia’s failures will reverberate over here, threatening our prosperity, our security and perhaps even our survival. The world’s two most mutually hostile nuclear states, India and Pakistan, are in Asia. The two states most likely to threaten others with nukes, North Korea and aspiring rogue nuclear power Iran, are there. The two superpowers with a billion plus people are in Asia as well. This is where the world’s fastest growing economies are. It is where the worst environmental problems exist. It is the home of the world’s largest democracy, the world’s most populous Islamic country (Indonesia — which is also among the most democratic and pluralistic of Islamic countries), and the world’s most rapidly rising non-democratic power as well. Asia holds more oil resources than any other continent; the world’s most important and most threatened trade routes lie off its shores. East Asia, South Asia, Central Asia (where American and NATO forces are fighting the Taliban) and West Asia (home among others to Saudi Arabia, Israel, Turkey and Iraq) are the theaters in the world today that most directly engage America’s vital interests and where our armed forces are most directly involved. The world’s most explosive territorial disputes are in Asia as well, with islands (and the surrounding mineral and fishery resources) bitterly disputed between countries like Russia, the two Koreas, Japan, China (both from Beijing and Taipei), and Vietnam. From the streets of Jerusalem to the beaches of Taiwan the world’s most intractable political problems are found on the Asian landmass and its surrounding seas. Whether you view the world in terms of geopolitical security, environmental sustainability, economic growth or the march of democracy, Asia is at the center of your concerns. That is the overwhelming reality of world politics today, and that reality is what President Obama’s trip is intended to address.
Hegemony Advantage - SCS

Impact Framing

Extinction from nuclear war dwarfs all other impact calculus – reducing nuclear risk is morally required

Jonathan Schell, 2000, Fate of the Earth, pp. 93-96, Jonathan Schell was an American author and was a fellow at the Institute of Politics at the John F. Kennedy School of Government and a fellow at the Kennedy School's Shorenstein Center on the Press, Politics, and Public Policy. In 2003, he was a visiting lecturer at Yale Law School, and in 2005, a Distinguished Visiting Fellow at Yale's Center for the Study of Globalization, whose work primarily dealt with campaigning against nuclear weapons.

https://books.google.com/books?id=tYKsAES1oQC&printsec=frontcover&dq=jonathan+schell+fate+of+the+earth&hl=en&sa=X&ved=0ahUKEwj2p6fzmbXOAhUCMAKHZxiD_QQ6AEIHjAA#v=onepage&q=to%20say%20that%20human%20extinction&f=false

To say that human extinction is a certainty would, of course, be a misrepresentation – just as it would be a misrepresentation to say that extinction can be ruled out. To begin with, we know that a holocaust may not occur at all. If one does occur, the adversaries may not use all their weapons. If they do use all their weapons, the global effects in the ozone and elsewhere, may be moderate. And if the effects are not moderate but extreme, the ecosphere may prove resilient enough to withstand them without breaking down catastrophically. These are all substantial reasons for supposing that mankind will not be extinguished in a nuclear holocaust, or even that extinction in a holocaust is unlikely, and they tend to calm our fear and to reduce our sense of urgency. Yet at the same time we are compelled to admit that there may be a holocaust, that the adversaries may use all their weapons, that the global effects, including effects of which we as yet unaware, may be severe, that the ecosphere may suffer catastrophic breakdown, and that our species may be extinguished. We are left with uncertainty, and are forced to make our decisions in a state of uncertainty. If we wish to act to save our species, we have to muster our resolve in spite of our awareness that the life of the species may not now in fact be jeopardized. On the other hand, if we wish to ignore the peril, we have to admit that we do so in the knowledge that the species may be in danger of imminent self-destruction. When the existence of nuclear weapons was made known, thoughtful people everywhere in the world realized that if the great powers entered into a nuclear-arms race the human species would sooner or later face the possibility of extinction. They also realized that in the absence of international agreements preventing it an arms race would probably occur. They knew that the path of nuclear armament was a dead end for mankind. The discovery of the energy in mass – of "the basic power of the universe" – and of a means by which man could release that energy altered the relationship between man and the source of his life, the earth. In the shadow of this power, the earth became small and the life of the human species doubtful. In that sense, the question of human extinction has been on the political agenda of the world ever since the first nuclear weapon was detonated, and there was no need for the world to build up its present tremendous arsenals before starting to worry about it. At just what point the species crossed, or will have crossed, the boundary between merely having the technical knowledge to destroy itself and actually having the arsenals at hand, ready to be used at any second, is not precisely knowable. But it is clear that at present, with some twenty thousand megatons of nuclear explosive power in existence, and with more being added every day, we have entered into the zone of uncertainty, which is to say the zone of risk of extinction. But the mere risk of extinction has a significance that is categorically different from, and immeasurably greater than that of any other risk and as we make our decisions we have to take that significance into account. Up to now, every risk has been contained within the framework of life; extinction would shatter the frame. It represents not the defeat of some purpose but an abyss in which all human purpose would be drowned for all time. We have no right to place the possibility of this limitless, eternal defeat on the same footing as risk that we run in the ordinary conduct of our affairs in our particular transient moment of human history. To employ a mathematician’s analogy, we can say that although the risk of extinction may be fractional, the stake is, humanly speaking, infinite, and a fraction of infinity is still infinity. In other words, once we learn that a holocaust might lead to extinction we have no right to gamble, because if we lose, the game will be over, and neither we nor anyone else will ever get another chance. Therefore, although, scientifically speaking, there is all the difference in the world between the mere possibility that a holocaust will bring about extinction and the certainty of it, morally they are the same, and we have no choice but to address the issue of nuclear weapons as though we knew for a certainty that their use would put an end to our species. In weighing the fate of the earth and, with it, our own fate, we stand before a mystery, and in tampering with the earth we tamper with a mystery. We are in deep ignorance. Our ignorance should dispose us to wonder, our wonder should make us humble, our humility should inspire us to reverence and caution, and our reverence and caution should lead us to act without delay to withdraw the threat we now post to the world and to ourselves.

US military key to stopping Chinese coercion

Zack Cooper, March 2, 2015, China's Menacing Sandcastles in the South China Sea, War on the Rocks, Zack Cooper is a fellow at the Center for Strategic and International Studies and a doctoral candidate at Princeton University, warontherocks.com/2015/03/chinas-menacing-sandcastles-in-the-south-china-sea/8/

If U.S. leaders are serious about countering Chinese coercion, they will have to accept more risk. For too long, Beijing has set the terms of the gray zone competition by leveraging its strengths against its neighbors’ weaknesses. Yet, despite its recent successes, China itself has many gray zone vulnerabilities. Through careful management of vertical and horizontal escalation risks, the United States can exploit these asymmetries to deter further Chinese coercion. Raising escalation risks can be an effective deterrent if carefully designed and calibrated. U.S. policymakers should focus their counter-coercion efforts on domains in which the United States and its allies and partners hold relative advantages, whether political, military, legal, economic, financial, or diplomatic. For example, despite China’s rapid military modernization, the U.S. military retains an asymmetric advantage in maritime power projection capabilities. China has attempted to sideline U.S. naval forces by utilizing China’s robust paramilitary forces to paint involvement of U.S. gray-hulled vessels as unnecessary escalation. But in the face of mounting Chinese coercion, the United States should consider the use of gray hulls in gray zones. China’s coercion campaign is unlikely to end without external intervention. Allowing Beijing to dictate the terms of the competition in the East and South China Seas enables continued coercion and undermines regional and international order. The time has come for the United States to stop playing along.

Greater US presence key to prevent instability in Asia

Ben Rimland, May 03, 2016, The US Should Admit Its Vulnerability to Chinese Nuclear Attacks, The Diplomat, Ben Rimland is an MPhil student in the Modern Japanese Studies department at St. Antony’s College, University of Oxford, where he studies maritime security and East Asia defense issues, thediplomat.com/2016/05/the-us-should-admit-its-vulnerability-to-chinese-nuclear-attacks/

In the late 1980s, a strong American conventional presence in Europe, together with shrewd diplomatic maneuvering, led to the Intermediate Nuclear Forces (INF) treaty, removing an entire class of nuclear weapons from the battlespace. The political good will and reduced tensions from these nuclear negotiations led, in turn, to the Conventional Forces in Europe treaty, largely spelling an end to the military tensions that defined the Cold War. A robust conventional presence in East Asia, combined with a more realistic American deterrence strategy, may present the best combination of sticks and carrots to induce greater Chinese cooperation in the rules-based order. Such an outcome would undoubtedly be beneficial to all involved, secure America’s continued place as the undisputed military hegemon in East Asia, and ensure China’s rise does not contribute to greater global instability.
Internationa lLaw Advantage - SCS

Uniqueness

China is attempting to make Asia a zone outside international law through island building

No responsible official desires war. Policymakers in Washington, Beijing, Tokyo, Seoul, Taipei, Canberra, and throughout Southeast Asia are unanimous on this point. Yet between war and peace there is an ever-widening no man’s land of assertiveness, coercion, and distrust. Especially within the gray zones of maritime Asia there is increasing competition over the rules, rulemaking, and rule enforcement. The United States has been at the center of regional post-World War II order-building and security maintenance, but it appears to be experiencing a slow erosion of its credibility. A re-emerged China is recasting itself as a maritime power, calling at times for an exclusionary “Asia for Asians” architecture, and using its comprehensive instruments of power to unilaterally change facts on the ground, in the sea, and in the air. Left unchecked, rising maritime tensions will further undermine American influence, jeopardize the sovereignty of neighboring states, and sink the general postwar regional order. This study is meant to contribute to thinking about how to preserve a peaceful system based on the rule of law.

South China Sea island building kills International law

Ryan Pickrell, October 26, 2015, The Tipping Point: Has the U.S.-China Relationship Passed the Point of No Return?, The National Interest, Ryan Pickrell is a translator, editor, writer and researcher for Changjiang Daily Press Group based in Wuhan, China, nationalinterest.org/feature/the-tipping-point-has-the-us-china-relationship-passed-the-14168

In the aftermath of this meeting, China began investing heavily in island construction and land reclamation activities in disputed waters. As these activities have stirred up a lot of dust in the region, the United States has demanded that China abandon its present course of action, insisting that it is provocative and negatively impacting regional peace and stability. Not only has China dismissed America’s demands, it has also increased its military presence in contested areas in order to establish anti-access zones. While China claims that its actions are within the scope of international law, the United States asserts that Chinese actions are in violation of the law of the sea and laws for the regulation of the international commons. China argues that the South China Sea issue is a territorial sovereignty issue, yet the United States regards this issue as a freedom of navigation dispute, as well as a fight for the preservation of the international legal system—a cornerstone for the American-led liberal world order.
International Law Advantage - SCS

Impact

International law is vitally important to a peaceful and equitable future

John Scales Avery, May 8, 2015. THE FUTURE OF INTERNATIONAL LAW, Nuclear Age Peace Foundation, John Scales Avery is a theoretical chemist noted for his research publications in quantum chemistry, thermodynamics, evolution, and history of science, https://www.wagingpeace.org/the-future-of-international-law/

Can we abolish the institution of war? Can we hope and work for a time when the terrible suffering inflicted by wars will exist only as a dark memory fading into the past? I believe that this is really possible. The problem of achieving internal peace over a large geographical area is not insoluble. It has already been solved. There exist today many nations or regions within each of which there is internal peace, and some of these are so large that they are almost worlds in themselves. One thinks of China, India, Brazil, the Russian Federation, the United States, and the European Union. Many of these enormous societies contain a variety of ethnic groups, a variety of religions and a variety of languages, as well as striking contrasts between wealth and poverty. If these great land areas have been forged into peaceful and cooperative societies, cannot the same methods of government be applied globally? Today, there is a pressing need to enlarge the size of the political unit from the nation-state to the entire world. The need to do so results from the terrible dangers of modern weapons and from global economic interdependence. The progress of science has created this need, but science has also given us the means to enlarge the political unit: Our almost miraculous modern communications media, if properly used, have the power to weld all of humankind into a single supportive and cooperative society. We live at a critical time for human civilization, a time of crisis. Each of us must accept his or her individual responsibility for solving the problems that are facing the world today. We cannot leave this to the politicians. That is what we have been doing until now, and the results have been disastrous. Nor can we trust the mass media to give us adequate public discussion of the challenges that we are facing. We have a responsibility towards future generations to take matters into our own hands, to join hands and make our own alternative media, to work actively and fearlessly for better government and for a better society. We, the people of the world, not only have the facts on our side; we also have numbers on our side. The vast majority of the world’s peoples long for peace. The vast majority long for abolition of nuclear weapons, and for a world of kindness and cooperation, a world of respect for the environment. No one can make these changes alone, but together we can do it. Together, we have the power to choose a future where international anarchy, chronic war and institutionalized injustice will be replaced by democratic and humane global governance, a future where the madness and immorality of war will be replaced by the rule of law. We need a sense of the unity of all mankind to save the future, a new global ethic for a united world. We need politeness and kindness to save the future, politeness and kindness not only within nations but also between nations. To save the future, we need a just and democratic system of international law; for with law shall our land be built up, but with lawlessness laid waste.

**Impact**

International law key to stop cultural misunderstanding and war

Christopher **Weeramantry** and John **Burroughs**, July 2005, International Law and Peace: A Peace Lesson, Hague Appeal of Peace, Sri Lankabhimanya Christopher Gregory Weeramantry is a Sri Lankan lawyer who was a Judge of the International Court of Justice from 1991 to 2000, serving as its Vice-President from 1997 to 2000 and is currently an Emeritus Professor at Monash University; John Burroughs is Executive Director at the Lawyers’ Committee on Nuclear Policy, lcnp.org/global/Law_and_Peace.pdf

International law is an essential tool for the abolition of war. War has been a part of the human condition for thousands of years, but its abolition is now a necessity. With weapons of mass destruction becoming ever more readily available to state and non-state actors, the threat to a peaceful world being dragged into catastrophic conflict is so great that civilization itself is in peril. Misunderstanding and cross-cultural ignorance are among the root causes of war. While global forces demolish geographical barriers and move the world toward a unified economy, **clashes among cultures can have damaging impact on peace. International law draws upon the principles of peace expressed by great peacemakers and embodied in ancient writings, religions, and disciplines, and places them in the social and political context of today to dissipate the clouds of prejudice, ignorance and vested interests that stand in the way of world peace and harmony.**
Creating peace and conditions for harmony is a moral obligation

Gerard F. Powers & Drew Christiansen. 1994, Peacemaking: Moral and Policy Challenges for a New World, United States Catholic Conference, Georgetown University Press, pages 45–46, Gerard Powers is professor of the practice of Catholic peacebuilding at the Kroc Institute. He also coordinates the Catholic Peacebuilding Network; Drew Christiansen, S.J., is Distinguished Professor of Ethics and Global Development in Georgetown University’s School of Foreign Service and co-director of the Program on the Church and the World at the Berkley Center, where he is a senior research fellow, https://books.google.com/books?id=xp6JwmU4IXUC&pg=PA46&lpg=PA46&dq=%22create+peace%22+%22moral+obligation%22&source=bl&ots=01kMwHsxT7&sig=xpfCv-RYdFyW83v6NOAZF6u6ziQ&hl=en&sa=X&ved=0ahUKEwjLIOTuhrXOAhVUMAKHbWMDMxkQ6AEIHxAB#v=onepage&q=%22create%20peace%22%20moral%20obligation%22&f=false

Even in the context of condemning war in the strongest possible terms, these texts do not refer to peace as a residual category. “Peace is not merely the absence of war.” 6 This point deserves emphasis because we automatically associate “the end of war” with “peace.” Recall, for example, powerful images in the collective American memory of the explosion of joy in Times Square, August 1945, at the end of World War II. Certainly, the moral obligation to end war commands the highest urgency. However, ending war does not automatically create peace. It may afford a particularly promising opportunity to construct peace -- one we may choose either to act upon or to squander. The obligation to act upon -- not squander - such an opportunity also commands the highest moral urgency. For that matter, the obligation to make peace has urgent priority even when there is no obvious opportunity to do so.

Hard power key to uphold international law

Daniel Twining, November 22, 2015, Time for America to Step Up in the South China Sea, Foreign Policy, Daniel Twining is senior fellow for Asia at the German Marshall Fund, foreignpolicy.com/2015/11/22/time-for-america-to-step-up-in-the-south-china-sea/

Soft power aside, the primary instrument for defending Asia’s fragile status quo must be American military strength. The United States must be more creative with its superior military toolkit in defending the existing liberal order. First, Washington must back its words with action. Secretary of Defense Ashton Carter says U.S. forces will operate wherever international law allows. American forces must systematically challenge China’s self-declared Air Defense Identification Zone over the East China Sea, and its “Nine-Dash Line” in the South China Sea, challenging China’s ability to enforce its questionable claims. Second, the United States should encourage its allies to undertake similar patrols through Southeast Asia’s maritime commons. Japan and Australia are considering doing so; India’s increasingly powerful navy should do the same as part of its ambitious “Act East” policy. The United States and its allies should undertake joint exercises in the South China Sea’s international waters, challenging China’s claims to control access to them. Third, the United States should work with its allies to help them deploy the same kind of anti-access and area-denial capabilities that China is developing to exclude foreign forces from Asia’s regional commons. These include missile defenses, anti-submarine warfare capabilities, and more sophisticated patrol and combat aircraft. The goal is not to present China with an offensive military threat, but rather to cast doubt on the viability of aggressive Chinese military operations. Fourth, the United States must focus more intently on the military dimensions of its pivot to Asia. American forces are concentrated in Japan and South Korea, a legacy of 20th-century conflicts; they should be dispersed across the region. This could include permanent bases in the Philippines and Australia, a more active rotational presence in countries like Vietnam and Malaysia, and an increase in the operations tempo of submarine and surface patrols.

US military presence is necessary to stop China and uphold international law

Militarily, if Beijing uses paramilitary and maritime militia vessels to harass the operations of American oil giants, Washington with the host countries’ consent could dispatch its coast guard with the navy on the horizon and aircraft in the sky to protect its economic interests. On the one hand, this would give the U.S. Navy more toeholds in the region, but would avoid sparking international confrontation with the use of warships. On the other hand, this action would uphold the international law in practice, and effectively demonstrate that the 9-dash line is invalid and inconsistent with UNCLOS. To be able to make this real, however, the U.S. Coast Guard needs to be expanded at appropriate levels to afford missions in the SCS, because most USCG vessels are already tasked with surveillance over the vast American EEZ and in the Arctic. In sum, if it is to deter Chinese coercion in the South China Sea, the U.S. needs to be strong and act more comprehensively.
Non-Unique: China already on road to collapse – 5 reasons

The endgame of Chinese communist rule has now begun, I believe, and it has progressed further than many think. We don’t know what the pathway from now until the end will look like, of course. It will probably be highly unstable and unsettled. But until the system begins to unravel in some obvious way, those inside of it will play along—thus contributing to the facade of stability. Communist rule in China is unlikely to end quietly. A single event is unlikely to trigger a peaceful implosion of the regime. Its demise is likely to be protracted, messy and violent. I wouldn’t rule out the possibility that Mr. Xi will be deposed in a power struggle or coup d’état. With his aggressive anticorruption campaign—a focus of this week’s National People’s Congress—he is overplaying a weak hand and deeply aggravating key party, state, military and commercial constituencies. The Chinese have a proverb, waiying, neiuan—hard on the outside, soft on the inside. Mr. Xi is a genuinely tough ruler. He exudes conviction and personal confidence. But this hard personality belies a party and political system that is extremely fragile on the inside. Consider five telling indications of the regime’s vulnerability and the party’s systemic weaknesses. First, China’s economic elites have one foot out the door, and they are ready to flee en masse if the system really begins to crumble. In 2014, Shanghai’s Hurun Research Institute, which studies China’s wealthy, found that 64% of the “high net worth individuals” whom it polled—393 millionaires and billionaires—were either emigrating or planning to do so. Rich Chinese are sending their children to study abroad in record numbers (in itself, an indictment of the quality of the Chinese higher-education system). Just this week, the Journal reported, federal agents searched several Southern California locations that U.S. authorities allege are linked to “multimillion-dollar birth-tourism businesses that enabled thousands of Chinese women to travel here and return home with infants born as U.S. citizens.” Wealthy Chinese are also buying property abroad at record levels and prices, and they are parking their financial assets overseas, often in well-shielded tax havens and shell companies. Meanwhile, Beijing is trying to extradite back to China a large number of alleged financial fugitives living abroad. When a country’s elites—many of them party members—flee in such large numbers, it is a telling sign of lack of confidence in the regime and the country’s future. Second, since taking office in 2012, Mr. Xi has greatly intensified the political repression that has blanketed China since 2009. The targets include the press, social media, film, arts and literature, religious groups, the Internet, intellectuals, Tibetans and Uighurs, dissidents, lawyers, NGOs, university students and textbooks. The Central Committee sent a draconian order known as Document No. 9 down through the party hierarchy in 2013, ordering all units to ferret out any seeming endorsement of the West’s “universal values”—including constitutional democracy, civil society, a free press and neoliberal economics. A more secure and confident government would not institute such a severe crackdown. It is a symptom of the party leadership’s deep anxiety and insecurity. Third, even many regime loyalists are just going through the motions. It is hard to miss the theater of false pretense that has permeated the Chinese body politic for the past few years. Last summer, I was one of a handful of foreigners (and the only American) who attended a conference about the “China Dream,” Mr. Xi’s signature concept, at a party-affiliated think tank in Beijing. We sat through two days of mind-numbing, nonstop presentations by two dozen party scholars—but their faces were frozen, their body language was wooden, and their boredom was palpable. They feigned compliance with the party and their leader’s latest mantra. But it was evident that the propaganda had lost its power, and the emperor had no clothes. In December, I was back in Beijing for a conference at the Central Party School, the party’s highest institution of doctrinal instruction, and once again, the country’s top officials and foreign experts recited their stock slogans verbatim. During lunch one day, I went to the campus bookstore—always an important stop so that I can update myself on what China’s leading cadres are being taught. Tomes on the store’s shelves ranged from Lenin’s “Selected Works” to Condoleezza Rice’s memoirs, and a table at the entrance was piled high with copies of a pamphlet by Mr. Xi on his campaign to promote the “mass line”—that is, the party’s connection to the masses. “How is this selling?” I asked the clerk. “Oh, it’s not,” she replied. “We give it away.” The size of the stack suggested it was hardly a hot item. Fourth, the corruption that riddles the party-state and the military also pervades Chinese society as a whole. Mr. Xi’s anticorruption campaign

Uniqueness Answers
is more sustained and severe than any previous one, but no campaign can eliminate the problem. It is stubbornly rooted in the single-party system, patron-client networks, an economy utterly lacking in transparency, a state-controlled media and the absence of the rule of law. Moreover, Mr. Xi’s campaign is turning out to be at least as much a selective purge as an antigraft campaign. Many of its targets to date have been political clients and allies of former Chinese leader Jiang Zemin. Now 88, Mr. Jiang is still the godfather figure of Chinese politics. Going after Mr. Jiang’s patronage network while he is still alive is highly risky for Mr. Xi, particularly since Mr. Xi doesn’t seem to have brought along his own coterie of loyal clients to promote into positions of power. Another problem: Mr. Xi, a child of China’s first-generation revolutionary elites, is one of the party’s “princelings,” and his political ties largely extend to other princelings. This silver-spoon generation is widely reviled in Chinese society at large. Finally, China’s economy—for all the Western views of it as an unstoppable juggernaut—is stuck in a series of systemic traps from which there is no easy exit. In November 2013, Mr. Xi presided over the party’s Third Plenum, which unveiled a huge package of proposed economic reforms, but so far, they are sputtering on the launchpad. Yes, consumer spending has been rising, red tape has been reduced, and some fiscal reforms have been introduced, but overall, Mr. Xi’s ambitious goals have been stillborn. The reform package challenges powerful, deeply entrenched interest groups—such as state-owned enterprises and local party cadres—and they are plainly blocking its implementation.

Non-Unique: CCP legitimacy is on the brink and getting worse – economic slowdown & lack of reforms

Melanie Hart, September 29, 2015, Assessing American Foreign Policy Toward China, Center for American Progress, Melanie Hart is a Senior Fellow and Director of China Policy at American Progress. She focuses on U.S. foreign policy toward China and works to identify new opportunities for bilateral cooperation, particularly on energy, climate change, and cross-border investment. Her research also covers China’s political system, market regulatory reforms, and how China’s domestic and foreign policy developments affect the United States., https://www.americanprogress.org/issues/security/report/2015/09/29/122283/assessing-american-foreign-policy-toward-china/

The Chinese economy has reached an inflection point. It is not yet clear whether the Chinese Communist Party can successfully traverse these changing circumstances and maintain its hold on power. The growth model that pulled more than 400 million Chinese citizens out of poverty over the past three decades is running out of steam. Chinese wages are rising and eliminating China’s prior price advantages in global export markets. Fixed infrastructure investments are producing diminishing returns. Chinese citizens no longer accept the pollution costs associated with heavy industry, and even if they did, the global market cannot continue to absorb more Chinese steel and cement at double-digit annual growth rates. In order to keep the economy growing and maintain ruling legitimacy, Chinese leaders must downshift from the old growth model and foster new industries based on technological innovation, domestic consumption, and services.

**Link Turn: Confrontation in SCS will increase nationalism and CCP legitimacy by distracting from the economic slowdown**

Michael Casey, March 1, 2016, Business-As-Usual Won’t Suffice In The South China Sea, Forbes, Mr. Casey is a security policy studies student at the George Washington University Elliott School of International Affairs., www.forbes.com/sites/realspin/2016/03/01/business-as-usual-wont-suffice-in-the-south-china-sea/#5e69d7c551c6

Moreover, China’s economy has slowed dramatically over the past year. Official data show the economy grew at 7% in 2015 – the slowest in a quarter of a century – and the true situation may be even worse. Given that the legitimacy of the Chinese Communist Party (CCP) relies upon continued economic growth, the figures are very worrisome. Engaging in overseas conflict is a useful way for government leaders to inflame nationalist fervor and channel domestic discontent towards their own purposes. Together, these two developments suggest the SAM deployment may represent a hardening of Chinese thinking on the South and East China Seas. If so, we can expect additional action, maybe the establishment of an Air Defense Identification Zone, over the course of this year. We should also not be surprised if China does decide to deploy anti-ship missiles or other offensive systems on the islands.

Link Turn: Competition with external powers leads to more nationalism – nationalism key to CCP legitimacy

Ryan Hang, OCTOBER 2014, Freedom for Authoritarianism: Patriotic Hackers and Chinese Nationalism, The Yale Review of International Studies, is a Web Developer & Software Engineer with a Bachelor of Arts (B.A.), Political Science (Specialization in Empirical Theory and Quantitative Methods) - his work on cyber studies and Chinese culture have been featured in several journals, yris.yira.org/essays/1447

As political circumstances in China have evolved, so has the role of nationalism in Chinese politics. The death of Mao Zedong and market oriented economic reforms championed by Deng Xiaoping in the early 1980s fundamentally altered Chinese politics and collapsed Chinese communist ideology. Economic hardship, corruption, and political instability following Deng Xiaoping’s economic reforms in the 1980s “greatly weakened mass support for the CCP and eroded its basis of legitimacy.”[59] Chinese leaders turned to nationalism in response to the collapse of communist ideology to fill “an ideological vacuum left by the collapse of Marxist ideology and reinforce the stability of the CCP.”[60] These leaders “wrapped themselves in the mantle of pragmatic nationalism, which they found remained the most reliable claim to the Chinese people’s loyalty and the only important value shared by the regime and its critics.”[61] The CCP maintained its legitimacy by promising national strength and focusing on high rates of economic growth. Through deploying nationalism, the CCP was able to ideologically tie China with itself and introduce the view that “the Communist state is the embodiment of the nation’s will,” and portraying the CCP as defenders of China against outside threats.[62] The CCP’s success with deploying nationalism as a means to generate political stability has established nationalism as the basis for the support and legitimacy of the CCP.[63] Nationalism is a primary strategy utilized by the Chinese government to answer political threats; in the face of political crisis, the CCP has consistently “appealed to nationalism in the name of patriotism as a way to ensure the loyalty of a population stewing in domestic discontent.”[64] Nationalism serves the Chinese government by bolstering “its legitimacy through invoking a deep sense of “Chineseness” among its citizens.[65] The government is able to resolve ideological fractures and consolidate the Chinese identity against external threats by fostering Nationalist sentiments. In the face of economic and political problems, nationalism “has become an effective instrument for enhancing the CCP’s legitimacy by allowing for it to be defined on the claim that the regime provides political stability and economic prosperity.”[66]

Link Turn: CCP Collapse predictions empirically false and biased

Hung et al, March 13, 2015, When Will China’s Government Collapse?, Foreign Policy, Ho-Fung Hung is an associate professor at Johns Hopkins Sociology. My scholarly interest includes global political economy, protest, nation-state formation, and social theory, with a focus on East Asia., Arthur R. Kroeber is a Senior Fellow at the Brookings-Tsinghua Center where he focuses on China’s political economy and its engagement with global economic institutions, Howard Waring French is a journalist, author, and photographer, as well as an associate professor at Columbia University Graduate School of Journalism. He was most recently a senior foreign correspondent with The New York Times, Suisheng Zhao is a professor of Chinese politics and foreign policy at the University of Denver’s Josef Korbel School of International Studies, foreignpolicy.com/2015/03/13/china_communist_party_collapse_downfall/

Predictions of Chinese political collapse have a long and futile history. Their persistent failure stems from a basic conceptual fault. Instead of facing the Chinese system on its own terms and understanding why it works — which could create insights into why it might stop working — critics judge the system against what they would like it to be, and find it wanting. This embeds an assumption of fragility that makes every societal problem look like an existential crisis. As a long-term resident of China, I would love the government to become more open, pluralistic and tolerant of creativity. That it refuses to do so is disappointing to me and many others, but offers no grounds for a judgment of its weakness.

Consequentialist Impact Scenario Answers

Impact Defense and Turn: Loose nukes aren’t a thing – there is no market and they are incredibly safe even when unattended. Additionally, nuclear alarmism is more likely to cause war

John Mueller, September 2, 2015, The Dangers of Alarmism, John Mueller is a senior fellow at the Cato Institute. He is also a member of the political science department and senior research scientist with the Mershon Center for International Security Studies at Ohio State University. A leading expert on terrorism and particularly on the reactions (or over-reactions) it often inspires, www.cato.org/publications/commentary/dangers-alarmism

An important part of the alarmism has been directed at, and impelled by the prospect of, nuclear terrorism, the most commonly embraced method by which it has been suggested that terrorists would be able to repeat, or even top, the destruction of 9/11. It was in 2004, in his influential book, Nuclear Terrorism — a work Nicholas Kristof of the New York Times found to be “terrifying” — that Harvard’s Graham Allison relayed his “considered judgment” that “on the current path, a nuclear terrorist attack on America in the decade ahead is more likely than not.” Allison has had a great deal of company in his alarming pronouncements. For example, in 2007, the distinguished physicist Richard Garwin put the likelihood of a nuclear explosion on an American or European city by terrorist or other means at 20 percent per year, which would work out to 89 percent over a ten-year period. Allison’s time is up, and so, pretty much, is Garwin’s. And it is important to the point out that not only have terrorists failed to go nuclear, but in the words of William Langewiesche who has assessed the process in detail, “The best information is that no one has gotten anywhere near this. I mean, if you look carefully and practically at this process, you see that it is an enormous undertaking full of risks for the would-be terrorists.” In fact, terrorist groups seem thus far to have exhibited only limited desire and even less progress in going atomic. This may be because, after brief exploration of the possible routes, they, unlike generations of alarmists on the issue, have discovered that the tremendous effort required is scarcely likely to be successful. It is highly improbable that a would-be atomic terrorist would be given or sold a bomb by a generous like-minded nuclear state because the donor could not control its use and because the ultimate source of the weapon might be discovered. Although there has been great worry about terrorists illicitly stealing or purchasing a nuclear weapon, it seems likely that neither “loose nukes” nor a market in illicit nuclear materials exists. Moreover, finished bombs have been outfitted with an array of locks and safety devices. There could be dangers in the chaos that would emerge if a nuclear state were utterly to fail, collapsing in full disarray. However, even under those conditions, nuclear weapons would likely remain under heavy guard by people who know that a purloined bomb would most likely end up going off in their own territory, would still have locks, and could probably be followed and hunted down by an alarmed international community. The most plausible route for terrorists would be to manufacture the device themselves from purloined materials. This task requires that a considerable series of difficult hurdles be conquered in sequence. These include the effective recruitment of people who at once have great technical skills and will remain completely devoted to the cause. In addition, a host of corrupted co-conspirators, many of them foreign, must remain utterly reliable, international and local security services must be kept perpetually in the dark, and no curious outsider must get consequential wind of the project over the months or even years it takes to pull off. In addition, the financial costs of the operation could easily become monumental. Alarmism about the atomic terrorist has had its most damaging results when it has been linked with an alarmist perspective about nuclear proliferation. For decades during and after the Cold War, there has been almost wall-to-wall alarm about the dangers supposedly inherent in nuclear proliferation. This perspective has almost never undergone careful examination. In fact, the proliferation of nuclear weapons has been far slower than has been commonly predicted over the decades primarily because the weapons do not generally convey much advantage to their possessor. And, more importantly, the effect of the proliferation that has taken place has been substantially benign: those who have acquired the weapons have “used” them simply to stoke their egos or to deter real or imagined threats. This holds even for the proliferation of the weapons to large, important countries run by unchallenged monsters who at the time they acquired the bombs were certifiably deranged: Josef Stalin who in 1949 was planning to change the climate of the Soviet Union by planting a lot of trees, and Mao Zedong who in 1964 had just carried out a bizarre social experiment that had resulted in artificial famine in which tens of millions of Chinese perished. Despite this experience, an aversion to nuclear proliferation continues to impel alarmed concern,
and it was a chief motivator of the Iraq War which essentially was a militarized anti-proliferation effort in which fears that Saddam Hussein’s Iraq, unlike all other nuclear states since 1945, might actually set off such weapons if he got them and/or that Saddam would give them to terrorists. The war that ensued proved to be a necessary cause of the deaths of more people than perished at Hiroshima and Nagasaki combined.

Consequentialist Impact Scenario Framing Answers

Framing Turn: Worst case predictions cause failed policy making, trade off with better solutions, and risk escalation – we need to prioritize probability over magnitude

At a security conference recently, the moderator asked the panel of distinguished cybersecurity leaders what their nightmare scenario was. The answers were the predictable array of large-scale attacks: against our communications infrastructure, against the power grid, against the financial system, in combination with a physical attack. I didn’t get to give my answer until the afternoon, which was: "My nightmare scenario is that people keep talking about their nightmare scenarios." There’s a certain blindness that comes from worst-case thinking. An extension of the precautionary principle, it involves imagining the worst possible outcome and then acting as if it were a certainty. It substitutes imagination for thinking, speculation for risk analysis, and fear for reason. It fosters powerlessness and vulnerability and magnifies social paralysis. And it makes us more vulnerable to the effects of terrorism. Worst-case thinking means generally bad decision making for several reasons. First, it’s only half of the cost-benefit equation. Every decision has costs and benefits, risks and rewards. By speculating about what can possibly go wrong, and then acting as if that is likely to happen, worst-case thinking focuses only on the extreme but improbable risks and does a poor job at assessing outcomes. Second, it’s based on flawed logic. It begs the question by assuming that a proponent of an action must prove that the nightmare scenario is impossible. Third, it can be used to support any position or its opposite. If we build a nuclear power plant, it could melt down. If we don’t build it, we will run short of power and society will collapse into anarchy. If we allow flights near Iceland’s volcanic ash, planes will crash and people will die. If we don’t, organs won’t arrive in time for transplant operations and people will die. If we don’t invade Iraq, Saddam Hussein might use the nuclear weapons he might have. If we do, we might destabilize the Middle East, leading to widespread violence and death. Of course, not all fears are equal. Those that we tend to exaggerate are more easily justified by worst-case thinking. So terrorism fears trump privacy fears, and almost everything else; technology is hard to understand and therefore scary; nuclear weapons are worse than conventional weapons; our children need to be protected at all costs; and annihilating the planet is bad. Basically, any fear that would make a good movie plot is amenable to worst-case thinking. Fourth and finally, worst-case thinking validates ignorance. Instead of focusing on what we know, it focuses on what we don’t know -- and what we can imagine. Remember Defense Secretary Rumsfeld’s quote: “Reports that say that something hasn’t happened are always interesting to me, because as we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns -- the ones we don’t know we don’t know.” And this: “the absence of evidence is not evidence of absence.” Ignorance isn’t a cause for doubt; when you can fill that ignorance with imagination, it can be a call to action. Even worse, it can lead to hasty and dangerous acts. You can’t wait for a smoking gun, so you act as if the gun is about to go off. Rather than making us safer, worst-case thinking has the potential to cause dangerous escalation. The new undercurrent in this is that our society no longer has the ability to calculate probabilities. Risk assessment is devalued. Probabilistic thinking is repudiated in favor of “possibilistic thinking”: Since we can’t know what’s likely to go wrong, let’s speculate about what can possibly go wrong. Worst-case thinking leads to bad decisions, bad systems design, and bad security. And we all have direct experience with its effects: airline security and the TSA, which we make fun of when we’re not appalled that they’re harassing 93-year-old women or keeping first graders off airplanes. You can’t be too careful! Actually, you can. You can refuse to fly because of the possibility of plane crashes. You can lock your children in the house because of the possibility of child predators. You can eschew all contact with people because of the possibility of hurt. Steven Hawking wants to avoid trying to communicate with aliens because they might be hostile; does he want to turn off all the planet’s television broadcasts because they’re radiating into space? It isn’t hard to parody worst-case thinking, and at its extreme it’s a psychological condition. Frank Furedi, a sociology professor at the University of Kent, writes: "Worst-case thinking encourages society to adopt fear as one of the dominant principles around which the public, the government and institutions should organize their life. It institutionalizes insecurity and fosters a mood of confusion and powerlessness. Through popularizing the belief that worst cases are normal, it incites people to
feel defenseless and vulnerable to a wide range of future threats." Even worse, it plays directly into the hands of terrorists, creating a population that is easily terrorized -- even by failed terrorist attacks like the Christmas Day underwear bomber and the Times Square SUV bomber. When someone is proposing a change, the onus should be on them to justify it over the status quo. But worst-case thinking is a way of looking at the world that exaggerates the rare and unusual and gives the rare much more credence than it deserves. It isn't really a principle; it's a cheap trick to justify what you already believe. It lets lazy or biased people make what seem to be cogent arguments without understanding the whole issue. And when people don't need to refute counterarguments, there's no point in listening to them.

Deontological Impact Scenario Answers

Turn: CCP collapse would be good – it’s the only way to save the environment

Revolution or collapse: One thing is certain: this locomotive is not going to be stopped so long as the Communist Party has its grip on the controls. The Chinese Communist Party is locked in a death spiral. It can’t rein in corruption because the party is built on corruption, thrives on corruption and can’t police itself. It can’t rein in ravenous resource consumption and suicidal pollution because, given its dependence on the market to generate new jobs, it has to prioritize growth over the environment like capitalist governments everywhere. It can’t even discipline its own subordinate officials to enforce and obey the government’s environmental, food and drug safety, building codes and similar laws because in this system subordinate officials aren’t necessarily subordinate and can often mobilize their family and guanxi-based backers to defend their interests and thwart Beijing. So long as this basic structural class/property arrangement remains in effect, no top-down “war on pollutions” or “war on corruption” is going to change this system or brake China’s trajectory to ecological collapse. Given the foregoing, I just don’t see how China’s spiral to collapse can be reversed short of social revolution.
Environmental sustainability our primary moral obligation

Bill Klemm, 2003, Why Do We Have to Protect the Environment?, Environmental Protection, Dr. W. R. (Bill) Klemm is Senior Professor of Neuroscience & Professor of Veterinary Integrative Biosciences at Texas A&M university, peer.tamu.edu/curriculum_modules/Ecosystems/module_4/whyitmatters.htm

The human species needs food and water. We need energy. But we also need to protect the ecosystem niches that make survival of our species possible. Beyond that, we need to protect the niches for other species too. Why do niches need protection? It’s not nice to try to fool Mother Nature. Ecosystems are complicated. We have seen in these lessons that complexity grows as we move up the ladder from cells to organ systems to ecosystems. The history of our attempts to manipulate ecosystems shows that we often make mistakes and fail to see the unintended consequences of our actions. Rich ecosystems are those with many occupied niches. A change in any one niche is likely to affect other niches and their occupant species. Extinction is forever. We don’t get a second chance. Environmental hazards are dangerous. Especially our lakes and oceans have become dumping grounds for dangerous chemicals (pesticides, herbicides, oil and refinery products, industrial wastes, and heavy metals). Some of these toxins actually concentrate in food webs, such as mercury in fish. Moral obligation. Our species owes its existence to the living world that we share with other species. We owe the living world a chance to perpetuate the life-creating processes of natural selection, population dynamics, and exchange cycles. We can only pay this debt by protecting the environment.
South China Sea Negative
Inherency Answers - SCS

US already doing a lot in South China Sea

Eric Gomez, APRIL 12, 2016, Calls to “Do More” in the South China Sea Miss Bigger Questions, Cato Institute, Eric Gomez is a Research Associate for defense and foreign policy studies at the Cato Institute. His academic and professional research focuses on regional security issues and U.S military strategy in East Asia, with a focus on maritime territorial disputes and China’s military modernization, www.cato.org/blog/calls-do-more-south-china-sea-miss-bigger-questions

It is difficult to determine what exactly “more” means given the already high level of U.S. activity in the SCS since the USS Lassen conducted a freedom of navigation operation (FONOP) in late October 2015. Since then, the U.S. Navy has conducted another FONOP in addition to other patrols involving aircraft carrier strike groups. Additionally, Philippine-U.S. military cooperation has reached its highest point since American forces were ejected from the country in 1991. Notable examples of cooperation are the recently finalized agreement for the U.S. military to set up “permanent logistics facilities” at five Filipino air bases, and tens of millions of dollars in military aid to improve the Philippines’ maritime patrol and surveillance capabilities.
Inherency Answers - SCS

The US is already increasing deployment in the South China Sea

Efforts by the Obama administration to enhance America’s strategic position in Southeast Asia have been considerable: expanding and diversifying U.S. force posture, strengthening our alliances, building partner capacity, engaging regional institutions and providing forward-deployed U.S. forces with the newest and most advanced capabilities. Accompanying this has been intensive diplomacy in the region, including with China. And yet none of this has been sufficient to stop or deter China from proceeding apace with its land reclamation activities.
Hegemony Advantage Answers - SCS

Uniqueness Answers

Non-Unique: US is in charge and will continue to be

Salvatore Babones June 11, 2015. American Hegemony Is Here to Stay, The National Interest, Salvatore Babones is an associate professor of sociology and social policy at the University of Sydney and an associate fellow at the Institute for Policy Studies, nationalinterest.org/feature/american-hegemony-here-stay-13089

When the Soviet Union finally disintegrated in 1991, American hegemony was complete. The United States sat at the top of the international system, facing no serious rivals for global leadership. This “unipolar moment” lasted a mere decade. September 11, 2001, signaled the emergence of a new kind of threat to global stability, and the ensuing rise of China and reemergence of Russia put an end to the era of unchallenged American leadership. Now, America’s internal politics have deadlocked and the U.S. government shrinks from playing the role of global policeman. In the second decade of the twenty-first century, American hegemony is widely perceived to be in terminal decline. Or so the story goes. In fact, reports of the passing of U.S. hegemony are greatly exaggerated. America’s costly wars in Iraq and Afghanistan were relatively minor affairs considered in long-term perspective. The strategic challenge posed by China has also been exaggerated. Together with its inner circle of unshakable English-speaking allies, the United States possesses near-total control of the world’s seas, skies, airwaves and cyberspace, while American universities, think tanks and journals dominate the world of ideas. Put aside all the alarmist punditry. American hegemony is now as firm as or firmer than it has ever been, and will remain so for a long time to come.
Hegemony Advantage Answers - SCS

Uniqueness Answers

Non-Unique: China can’t, and doesn’t want to, run Asia

Dingding Chen, January 14, 2015, Relax, China Won’t Challenge US Hegemony, The Diplomat, Dingding Chen is an assistant professor of Government and Public Administration at the University of Macau, Non-Resident Fellow at the Global Public Policy Institute (GPPi) Berlin, Germany. He is also the founding Director of 海国图智研究院 (Intellisia Institute), a newly established independent think tank focusing on international affairs in China. His research interests include: Chinese foreign policy, Asian security, Chinese politics, and human rights, thediplomat.com/2015/01/relax-china-wont-challenge-us-hegemony/

First let us look at China’s capabilities, which need to be especially formidable if China wants to challenge the United States. Although China’s comprehensive capabilities have been growing rapidly for the past three decades, almost all analysts inside and outside of China agree that there is still a huge gap between China and the U.S. in terms of comprehensive capabilities, particularly when the U.S. is far ahead of China in military and technological realms. China’s economy might have already passed the U.S. economy as the largest one in 2014, but the quality of China’s economy still remains a major weakness for Beijing. Thus, it would be a serious mistake for China to challenge the U.S. directly given the wide gap of capabilities between the two. Even if one day China’s comprehensive capabilities catch up with the United States, it would still be a huge mistake for China to challenge the U.S. because by then the two economies would be much more closely interconnected, creating a situation of mutual dependence benefiting both countries. Besides limited capabilities, China also has limited ambitions which have not been properly understood by many U.S. analysts. It is true that China’s grand strategy is to realize the “China dream” — a dream that will bring wealth, glory, and power to China again — but this, by no means, suggests that China wants to become a hegemon in Asia, or to create a Sino-centric tributary system around which all smaller states must obey China’s orders. Perhaps these perceptions exist in the United States because many U.S. analysts have unconsciously let ultra-realist thinking slip into their minds, thereby believing that states are constantly engaged in the ruthless pursuit of power and influence. But the structure of international politics has fundamentally changed since the end of the Cold War, thus rendering any serious possibility of world hegemony ineffective or even impossible. In essence, the costs of hegemony outweigh the benefits of hegemony in this new era of international politics, thanks to rising nationalism, nuclear weapons, and increasing economic interdependence between major powers. The Chinese leaders understand this new and changed structure of international politics and based on their assessments, they have decided not to seek hegemony, which is a losing business in this new era.
Turn: Attempting to maintain US hegemony leads to instability
Christopher Layne, 2012 (International Studies Quarterly 56, "This Time It's Real: The End of Unipolarity and the Pax Americana")

Revealingly, Ikenberry makes clear this expectation when he says that the deal the United States should propose to China is for Washington “to accommodate a rising China by offering it status and position within the regional order in return for Beijing’s acceptance and accommodation of Washington’s core interests, which include remaining a dominant security provider within East Asia” (Ikenberry 2011:356). It is easy to see why the United States would want to cut such a deal but it is hard to see what’s in it for China. American hegemony is waning and China is ascending, and there is zero reason for China to accept this bargain because it aims to be the hegemon in its own region. The unfolding Sino-American rivalry in East Asia can be seen as an example of Dodge City syndrome (in American Western movies, one gunslinger says to the other: “This town ain’t big enough for both of us”) or as a geopolitical example of Newtonian physics (two hegemons cannot occupy the same region at the same time). From either perspective, the dangers should be obvious: unless the United States is willing to accept China’s ascendancy in East (and Southeast) Asia, Washington and Beijing are on a collision course.

“It’s not just on our maps. It’s in our minds: China is the center of all the action here,” explained a Singaporean journalist, pointing to the growing Chinese staff in his office. China sits at the core of the most populous and economically dynamic pan-region in the world, encompassing Russia's Far East, Japan, the Korean peninsula, India, Southeast Asia, and the Pacific islands, including Australia and New Zealand. No nation within the India-Japan-Australia triangle - whether of the first, second, or third world - can withstand China’s economic, demographic, political, and cultural encroachment. Some Americans believe it is their own preponderance that guarantees Asian stability, but the half of the world population that resides in Asia increasingly sees its stability as occurring under Chinese hegemony. “America can come and go, but our fate ultimately hinges on China’s decisions and behavior,” remarked a Thai diplomat during a conference at a five-star Bangkok hotel.

No miscalculation escalation in Asia – precedent for restraint

Steven Stashwick, September 25, 2015, South China Sea: Conflict Escalation and ‘Miscalculation’ Myths, The Diplomat, Steven Stashwick has a graduate studies in international relations at the University of Chicago, and is a Lieutenant Commander in the U.S. Navy Reserve, http://thediplomat.com/2015/09/south-china-sea-conflict-escalation-and-miscalculation-myths/

In Asia, there is recent and dramatic precedent for restraint, even after an unambiguously hostile local event, which belies theoretical arguments about the risk of miscalculation and unintended escalation. When the South Korean warship Cheonan was sunk in 2010, South Korea determined that North Korea was responsible. Far from a mere ‘incident’ of the sort worried over in the South China Sea, this was a belligerent act against South Korea’s armed forces. And yet, there was no miscalculation-fueled conflict spiral, and instead a strategically calibrated response. It remains unknown whether the sinking of the Cheonan was ordered by the North Koreans (they continue to deny any responsibility), the act of a renegade, or, perhaps least plausibly, an accident. What is clear is that despite a sunken ship and 46 sailors killed, the incident did not spiral out of control. This suggests that South Korea’s political calculus did not view militarily punishing North Korea worth the risk of a renewed – and potentially nuclear – war, which is to say that an extraordinary but tactical-level event did not trump strategic preferences. Even so, some take the miscalculation-escalation dynamic so far as to suggest that incidents between fishing vessels and coast guards in the South China Sea might lead to war. In view of the Cold War record and the recent Cheonan example, such propositions are drastically overstated. It is conceivable that a state already resolved to escalate a dispute militarily might view a local maritime incident as a convenient casus belli. But in that emphatically calculated case, no institutional impediments to such incidents would prevent the hostility. On the contrary, the prevalence of coast guards and fishing vessels is actually a sign of restraint. For a front so often considered a “flashpoint,” it is notable how few incidents in the South China Sea are between naval assets. This is not accident or luck, but instead suggests that regional players deliberately use lightly armed coast guard and other para-military “white hull” vessels to enforce their claims. Because these units do not have the ability to escalate force the way warships do, it in fact signals their desire to avoid escalation. And while “gray hull” naval vessels may be just over the horizon providing an implicit threat of force, they can also provide a further constraint on potential incidents; their very presence compels parties to consider how far to escalate without inviting more serious responses.

Impact Turn: Worst case predictions cause failed policy making, trade off with better solutions, and risk escalation – we need to prioritize probability

At a security conference recently, the moderator asked the panel of distinguished cybersecurity leaders what their nightmare scenario was. The answers were the predictable array of large-scale attacks: against our communications infrastructure, against the power grid, against the financial system, in combination with a physical attack. I didn’t get to give my answer until the afternoon, which was: My nightmare scenario is that people keep talking about their nightmare scenarios. There’s a certain blindness that comes from worst-case thinking. An extension of the precautionary principle, it involves imagining the worst possible outcome and then acting as if it were a certainty. It substitutes imagination for thinking, speculation for risk analysis, and fear for reason. It fosters powerlessness and vulnerability and magnifies social paralysis. And it makes us more vulnerable to the effects of terrorism. Worst-case thinking means generally bad decision making for several reasons. First, it’s only half of the cost-benefit equation. Every decision has costs and benefits, risks and rewards. By speculating about what can possibly go wrong, and then acting as if that is likely to happen, worst-case thinking focuses only on the extreme but improbable risks and does a poor job at assessing outcomes. Second, it’s based on flawed logic. It begs the question by assuming that a proponent of an action must prove that the nightmare scenario is impossible. Third, it can be used to support any position or its opposite. If we build a nuclear power plant, it could melt down. If we don’t build it, we will run short of power and society will collapse into anarchy. If we allow flights near Iceland’s volcanic ash, planes will crash and people will die. If we don’t, organs won’t arrive in time for transplant operations and people will die. If we don’t invade Iraq, Saddam Hussein might use the nuclear weapons he might have. If we do, we might destabilize the Middle East, leading to widespread violence and death. Of course, not all fears are equal. Those that we tend to exaggerate are more easily justified by worst-case thinking. So terrorism fears trump privacy fears, and almost everything else; technology is hard to understand and therefore scary; nuclear weapons are worse than conventional weapons; our children need to be protected at all costs; and annihilating the planet is bad. Basically, any fear that would make a good movie plot is amenable to worst-case thinking. Fourth and finally, worst-case thinking validates ignorance. Instead of focusing on what we know, it focuses on what we don’t know -- and what we can imagine. Remember Defense Secretary Rumsfeld’s quote? "Reports that say that something hasn’t happened are always interesting to me, because as we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns -- the ones we don’t know we don’t know." And this: "the absence of evidence is not evidence of absence." Ignorance isn’t a cause for doubt; when you can fill that ignorance with imagination, it can be a call to action. Even worse, it can lead to hasty and dangerous acts. You can’t wait for a smoking gun, so you act as if the gun is about to go off. Rather than making us safer, worst-case thinking has the potential to cause dangerous escalation. The new undercurrent in this is that our society no longer has the ability to calculate probabilities. Risk assessment is devalued. Probabilistic thinking is repudiated in favor of “possibilistic thinking”: Since we can’t know what’s likely to go wrong, let’s speculate about what can possibly go wrong. Worst-case thinking leads to bad decisions, bad systems design, and bad security. And we all have direct experience with its effects: airline security and the TSA, which we make fun of when we’re not appalled that they’re harassing 93-year-old women or keeping first graders off airplanes. You can’t be too careful! Actually, you can. You can refuse to fly because of the possibility of plane crashes. You can lock your children in the house because of the possibility of child predators. You can eschew all contact with people because of the possibility of hurt. Steven Hawking wants to avoid trying to communicate with aliens because they might be hostile; does he want to turn off all the planet’s television broadcasts because they’re radiating into space? It isn’t hard to parody worst-case thinking, and at its extreme it’s a psychological condition. Frank Furedi, a sociology professor at the University of Kent, writes: "Worst-case thinking encourages society to adopt fear as one of the dominant principles around which the public, the government and institutions should organize their life. It institutionalizes insecurity and fosters a mood of confusion and powerlessness. Through popularizing the belief that worst cases are normal, it incites people to

Through popularizing the belief that worst cases are normal, it incites people to
feel defenseless and vulnerable to a wide range of future threats." Even worse, it plays directly into the hands of terrorists, creating a population that is easily terrorized -- even by failed terrorist attacks like the Christmas Day underwear bomber and the Times Square SUV bomber. When someone is proposing a change, the onus should be on them to justify it over the status quo. But worst-case thinking is a way of looking at the world that exaggerates the rare and unusual and gives the rare much more credence than it deserves. It isn't really a principle; it's a cheap trick to justify what you already believe. It lets lazy or biased people make what seem to be cogent arguments without understanding the whole issue. And when people don't need to refute counterarguments, there's no point in listening to them.

Turn: US military action in South China Sea leads to Chinese backlash

Doug BANDOW and Eric GOMEZ, October 22, 2015. Further Militarizing the South China Sea May Undermine Freedom of Navigation, CATO Institute, Doug Bandow is Senior Fellow and Eric Gomez is Research Associate at the Cato Institute, www.cato.org/publications/commentary/further-militarizing-south-china-sea-may-undermine-freedom-navigation

A FONOP also is likely to spark a Chinese backlash, hindering a peaceful resolution of SCS disputes. As MIT’s Taylor Fravel observed, a FONOP “gives China an opportunity to assert that the United States is the country ‘militarizing’ the South China Sea,” providing Beijing with an excuse to respond in kind. It would be better to instead test Chinese pledges of goodwill. Xi Jinping’s recent promise not to militarize the artificial islands may be insincere, but conducting a FONOP will create pressure for Xi to respond aggressively, even if his commitment to eschew militarization was genuine. Likewise, China would appear aggressive, dangerous, and duplicitous if it continued to take provocative actions after promising to not militarize, making an American response appear reasonable. Additionally, a FONOP plays into Chinese nationalist rhetoric that paints American actions as hypocritical and one-sided. What about America’s allies and friends? Reassuring Washington’s partners appears to be the true objective of the upcoming FONOP. To make up for their limited military capabilities, other claimants such as Vietnam and the Philippines have turned to the United States. Secretary of Defense Ash Carter has repeatedly proclaimed that American participation in the SCS dispute is intended to reassure allies that Washington will not leave them flapping in the wind. For instance, at the Shangri La Dialogue, Carter declared, “There should be no mistake: the United States will fly, sail, and operate wherever international law allows.” A FONOP in the SCS would back his rhetoric. However, if China uses the U.S. action as a rationale for maintaining or increasing the rate of island reclamation then friendly states likely would feel even more threatened. This would counteract the FONOP’s original purpose and would likely push the United States and China into a dangerous spiral, requiring more shows of force to reassure allies against an assertive China acting aggressively in response to American shows of force. Chinese behavior in the SCS is a legitimate concern for the United States, but Washington should realize that this dispute is unlikely to be resolved with military power. Indeed, problems will only grow if both Washington and Beijing keep poking each other in the eye. Maintaining peace in the SCS instead requires the United States and China to work together to resolve precisely these kinds of contentious issues.

Turn: South China Sea engagement leads to US hegemony decline and Chinese hegemony increase

Philip Reynolds June 01, 2016, Is China Winning in the South China Sea?, The Diplomat, Phil Reynolds is a Ph.D. candidate at the University of Hawaii, thediplomat.com/2016/06/is-china-winning-in-the-south-china-sea/

China is using the South China Sea islands as the means of making the 21st century for itself what the 20th century was to the United States. Chinese policies, coldly rational, are meant to illicit a military response from the United States. As the dominant power, Washington has little incentive to give the challenger a stage on which it can engage the United States as a peer. On the other hand, China has everything to gain from a successful challenge. This leads to an interesting hypothesis: The islands themselves are really not the objective of Chinese expansion. Rather, the goal of China’s grand strategy may be to successfully challenge the United States in the eyes of the world. If China is correct, any actual conflict with the United States will not end in an all-out war. Intense pressure from the international community will quickly lead to a negotiated settlement. This is a win for China, one that it is preparing for in its new Defense White Paper, just released in mid-2015. China has been preparing its maritime forces for “offshore waters defense” and to “protect is maritime rights and interests.” China’s ability to deny the United States entry into contested areas is meant to last just long enough for negotiations to begin. Faced with the loss of ships and sailors, it will be difficult to convince the American public that Chinese hegemony in the western Pacific is an existential threat, especially after the debacle in Iraq. History and China have maneuvered the United States into a bleak position with four alternatives, all of which benefit China: The United States can continue with low-grade military confrontations that do little to stop Chinese expansion; the United States can go to war and quickly find itself with heavy losses and a negotiated settlement; it can retreat, leaving its recent partner nations to develop their own status quo with China; or it can move away from the “pivot to Asia” toward a more realpolitik approach vis-a-vis China. A fifth outcome, worst of all, is that newly emboldened partners push back against the Chinese, triggering a shooting war and drawing in the United States. All five outcomes make China look stronger and closer to making the 21st century a Chinese century.

Uniqueness Answers

Non-Unique: China’s South China Sea claims are correct and long standing – the problem is with International law’s ambiguity not China

Zheng Zhihua June 12, 2015, WHY DOES CHINA’S MARITIME CLAIM REMAIN AMBIGUOUS?, Asia Maritime Transparency Initiative, Dr. Zheng Zhihua is director of Joint Institute for Maritime Law and History at East China University of Political Science and Law (ECUPL). He is also deputy general secretary of Shanghai Law and Society Association. Dr. Zheng works in the fields of oceans law and policy. He is also a research fellow of Law and Society Center, KoGuan Law School of Shanghai Jiao Tong University, amti.csis.org/why-does-chinas-maritime-claim-remain-ambiguous/

China has an unequivocal and consistent territorial claim on the islands and other land features in the South China Sea. As a matter of fact, it has unequivocally stated its claim in three official documents: the 1947 Location Map of the South China Sea Islands released by the Kuomintang government in Nanjing, the 1958 Declaration of the Government of New China on the Territorial Sea, and the 1992 Law on Territorial Sea and Contiguous Zone. These documents state that the Dongsha (Pratas) Islands, Xisha (Paracel) Islands, Zhongsha (Macclesfield Bank/Scarborough Shoal) Islands, Nansha (Spratly) Islands and other islands are part of the sovereign territory of China. Some countries view China’s maritime claim in the South China Sea as ambiguous for historical reasons. The first reason is that the UNCLOS does not properly address the issue of historic rights. Despite the reference to historic title in Articles 15 and 298(1)(a), the provision on historic bays in Article 15(6), and the recognition of traditional fishing rights in Article 51, it does not have any provision for the definition of historic rights or their specific connotation and denotation. The second is that no consistent understanding has been reached in international law on historic rights. For example, Yehuda Z. Blum, an Israeli professor of law and diplomat, has observed: The term “historic rights” denotes the possession by a state, over certain land or maritime areas, of rights that would not normally accrue to it under the general rules of international law, such rights having been acquired by that state through a process of historical consolidation ... Historic rights are a product of a lengthy process comprising a long series of acts, omissions and patterns of behavior which, in their entirety, and through their cumulative effect, bring such rights into being and consolidate them into rights valid in international law.” A state acquires historic rights through effective exercise of these rights by one or more states, a practice followed by relevant states. The concept of historic rights is almost equivalent to that of historic water. In this vein, Leo Bouchez, a renowned international law professor, says the concept of “historic rights” has evolved from the concept of “historic water” and “historic bays”. The development from “historic bays” to “historic water” and from “historic title” to “historic rights” indicates the evolution of legal concepts with the development of state practice, and that such concepts have not been finalized. From the point of view of China, one of the world’s oldest civilizations, the South China Sea is part of the traditional Asian order and, hence, it would be inappropriate to comprehend the Nine-Dash Line by relying solely on the Westphalian nation-state system. As Keyuan Zou, Harris professor of International Law at the University of Central has observed, the South China Sea Nine-Dash Line map was officially released by the Chinese Kuomintang government half a century before the UNCLOS, and one decade before the 1958 Four Geneva Conventions on the Law of the Sea. Thus, China’s historic rights within the Nine-Dash Line cannot be ignored. The Nine-Dash Line drawn by the Chinese government in 1947, at approximately the median position between China’s South China Sea islands and reefs and the coastlines of bordering states, reflects the scope of China’s claims. The consistency of the claims has been maintained by China after 1949, and the claims have been recognized or acquiesced to by bordering states over a long period of time. Therefore, the Nine-Dash Line has probative force and weight under international law. The so-called ambiguity in China’s Nine-Dash Line map and its claim on the waters within that line mainly stems from the imperfection of the UNCLOS. To some extent, international law on historic rights is defective in theory and doctrine and lacks a unified standard. China has been striving to clarify its claim in the South China Sea. But the joint efforts of the international community are also needed to complement and improve the UNCLOS by agreeing to a new international convention or protocol in order to clarify the understanding of historic rights.
Non-Unique: Chinese island building in the South China Sea is legal

But **there is in fact nothing illegal about building up maritime possessions you claim as your own.** Another nation may challenge you, as when PRC warships clashed with Vietnamese transport ships in the Spratlys in 1988. (Right was established by might; 70 Vietnamese died and some reefs changed hands.) But **if you can acquire control over reefs you can surround them with as much concrete as you want.**

Turn: International law is used as a cover for US imperialism

Introduction By now we are familiar with imperial states using their military power to attack, destroy and occupy independent countries. Boatloads of important studies have documented how imperial countries have seized and pillaged the resources of mineral-rich and agriculturally productive countries, in consort with multi-national corporations. Financial critics have provided abundant data on the ways in which imperial creditors have extracted onerous rents, royalties and debt payments from indebted countries and their taxpayers, workers, employees and productive sectors. What has not been examined fully is the over-arching legal architecture which informs, justifies and facilitates imperial wars, pillage and debt collection. The Centrality of Imperial Law While force and violence, especially through overt and covert military intervention, have always been an essential part of empire-building, it does not operate in a legal vacuum: Judicial institutions, rulings and legal precedents precede, accompany and follow the process of empire building. The legality of imperial activity is based largely on the imperial state’s judicial system and its own legal experts. Their legal theories and opinions are always presented as over-ruling international law as well as the laws of the countries targeted for imperial intervention. Imperial law supersedes international law simply because imperial law is backed by brute force; it possesses imperial/colonial air, ground and naval armed forces to ensure the supremacy of imperial law. In contrast, international law lacks an effective enforcement mechanism. Moreover, international law, to the extent that it is effective, is applied only to the weaker powers and to regimes designated by the imperial powers as ‘violators’. The very judicial processes, including the appointment of judges and prosecutors who interpret international law, investigate international crime and arrest, sentence and punish ‘guilty’ parties are under to the influence of the reigning imperial powers. In other words, the application and jurisdiction of international law is selective and subject to constraints imposed by the configurations of imperial and national power. International law, at best, can provide a ‘moral’ judgment, a not insignificant basis for strengthening the political claims of countries, regimes and people seeking redress from imperial war crimes and economic pillage. To counter the claims and judgments pertaining to international law, especially in the area of the Geneva protocols such as war crimes and crimes against humanity, imperial legal experts, scholars and judges have elaborated a legal framework to justify or exempt imperial-state activity. The Uses of Imperial Law Empire-building throughout history is the result of conquest – the use or threat of superior military force. The US global empire is no exception. Where compliant rulers ‘invite’ or ‘submit’ to imperial domination, such acts of treason on the part of ‘puppet’ or ‘client’ rulers usually precipitate popular rebellions, which are then suppressed by joint imperial and collaborator armies. They cite imperial legal doctrine to justify their intervention to repress a subject people in revolt. While empires arose through the direct or indirect use of unbridled force, the maintenance and consolidation of empires requires a legal framework. Legal doctrines precede, accompany and follow the expansion and consolidation of empire for several reasons. Legality is really an extension of imperial conquest by other means. A state of constant warfare raises the cost of imperial maintenance. Force, especially in imperial democracies undermines the sense of civic virtue, which the rulers and citizens claim to uphold. Maintaining ‘law and order’ in the conquered nations requires a legal system and doctrine to uphold imperial rule, giving the facade of legitimacy to the outside world, attracting collaborator classes and individuals and providing the basis for the recruitment of local military, judicial and police officials. Imperial legal pronouncements, whether issued directly by executive, judicial, military or administrative bodies, are deemed the ‘supreme law of the universe’, superior to international law and protocols fashioned by non-imperial authorities and legal experts. This does not imply that imperial rulers totally discard international law; they just apply it selectively to their adversaries, especially against independent nations and rulers, in order to justify imperial intervention and aggression – Hence the ‘legal bases’ for dismantling Yugoslavia or invading Iraq and assassinating its rulers. Legal rulings are issued by the imperial judiciary to force states to comply with the economic demands of multi-national corporations, banks, creditors and speculators, even after the local or national courts have ruled such claims unlawful.

Turn: US international policy cloaked in mindset of superiority – leads to violence and destruction

Glenn Greenwald, February 18, 2013, "The premises and purposes of American exceptionalism", The Guardian, Glenn Greenwald is a former columnist on civil liberties and US national security issues for the Guardian,
http://www.theguardian.com/commentisfree/2013/feb/18/american-exceptionalism-north-korea-nukes

This belief in America’s unparalleled greatness has immense impact. It is not hyperbole to say that the sentiment expressed by Cooke is the overarching belief system of the US political and media class, the primary premise shaping political discourse. Politicians of all types routinely recite the same claim, and Cooke’s tweet was quickly re-tweeted by a variety of commentators and self-proclaimed foreign policy experts from across the spectrum. Note that Cooke did not merely declare America’s superiority, but rather used it to affirm a principle: as a result of its objective superiority, the US has the right to do things that other nations do not. This self-affirming belief - I can do X because I'm Good and you are barred from X because you are Bad - is the universally invoked justification for all aggression. It's the crux of hypocrisy.

And most significantly of all, it is the violent enemy of law: the idea that everyone is bound by the same set of rules and restraints. This eagerness to declare oneself exempt from the rules to which others are bound, on the grounds of one's own objective superiority, is always the animating sentiment behind nationalistic criminality. Here's what Orwell said about that in Notes on Nationalism: "All nationalists have the power of not seeing resemblances between similar sets of facts. A British Tory will defend self-determination in Europe and oppose it in India with no feeling of inconsistency. Actions are held to be good or bad, not on their own merits, but according to who does them, and there is almost no kind of outrage — torture, the use of hostages, forced labour, mass deportations, imprisonment without trial, forgery, assassination, the bombing of civilians — which does not change its moral colour when it is committed by 'our' side . . . The nationalist not only does not disapprove of atrocities committed by his own side, but he has a remarkable capacity for not even hearing about them." Preserving this warped morality, this nationalistic prerogative, is, far and away, the primary objective of America’s foreign policy community, composed of its political offices, media outlets, and (especially) think tanks. What Cooke expressed here - that the US, due to its objective superiority, is not bound by the same rules as others - is the most cherished and aggressively guarded principle in that circle. Conversely, the notion that the US should be bound by the same rules as everyone else is the most scorned and marginalized. Last week, the Princeton professor Cornel West denounced Presidents Nixon, Bush and Obama as "war criminals", saying that "they have killed innocent people in the name of the struggle for freedom, but they're suspending the law, very much like Wall Street criminals".

West specifically cited Obama's covert drone wars and killing of innocent people, including children. What West was doing there was rather straightforward: applying the same legal and moral rules to US aggression that he has applied to other countries and which the US applies to non-friendly, disobedient regimes. In other words, West did exactly that which is most scorned and taboo in DC policy circles.
Positive peace is an uncritical, empty moral framework – looking at actual scenarios is more important.

Peter Lawler, March 2002, Peace Review; Mar2002, Vol. 14 Issue 1, p7, Peter Lawler is Senior lecturer in international relations, University of Manchester https://www.academia.edu/6093860/Peace_Research_War_and_the_Problem_of_Focus?auto=download

My principal concern at the time was with the growing preoccupation of much of peace research (or peace studies) with the issue of “structural violence” and the pursuit of such goals as justice, human fulfilment, or a more just world order—in short, the realization of positive peace. As laudable and important as such objectives clearly are, I was unconvinced at the time that peace research brought anything distinctive to them. Such concerns now lay at the heart of a wide range of social scientific disciplines. Furthermore, the rapid expansion of post-positivist theorizing across the social sciences, perhaps most importantly in the fields of international relations and security studies, had eroded the normative distinctiveness of peace research to a significant extent. I went on to suggest that peace research might reacquire focus by self-consciously serving as a conduit between theoretical and conceptual developments across the social sciences and the continuing problem of direct violence within and between states. By this I did not mean that peace research should simply reduce itself to conflict analysis or return to the quasi-scientism of its foundational years. Rather, I envisaged a normatively informed peace research engaging critically with orthodox discourses (in the Foucauldian sense) of security and strategy. In more practical terms, I envisaged peace research as a site for cutting-edge research into the resolution of the various extremely violent conflicts that have marked the post-Cold-War era. Although such an engagement clearly requires consideration of the structural impetuses to the outbreak of violence, I did not see the analysis of the origins and development of such things as exploitation and poverty as the appropriate primary focus of peace research. Why? Because I felt this contributed to the dissipation of peace research’s impact. This would continue the problem of peace research being perceived as the conceptually impoverished cousin of various other disciplines, such as political economy, sociology and so on, where research into such issues is vastly more diverse and developed. My book hardly ever off the shelves in vast numbers, nor did my observations cause much of a ripple in peace research circles. Galtung’s own response was confined to a couple of dismissive sentences in the introduction to one of his recent books. Most reactions to my argument arose in the context of presentations by myself at conferences, seminars and such. Of those who did comment, in writing or to me personally, a minority supported my sentiments but the majority took the view that I was arguing for peace research effectively to shift back to a focus on negative peace and this could hardly be a forward step. Some accused me of being conservative, reactionary even. I now teach and research primarily in the field of international relations and here, by contrast, the perception that I am a critic of peace research, and Galtung in particular, has generally met with either approval or acute disinterest. This is in spite of the fact that, although by no means all, of my disciplinary colleagues apparently share the normative sentiments of many peace researchers. In other words, for many international relations scholars, peace research continues to have an image problem. True, the crassest form of an international relations critique of peace research still falls back on the tired dualism of realism versus idealism, with peace research firmly and pejoratively located within the latter. A more serious critique, however, revolves around three common perceptions of peace research: the absence of a substantial theoretical or conceptual core, a tendency to deploy uncritically key terms such as “structural violence” or “positive peace,” and an unclear standpoint with regard to direct violence, particularly the use of violence in the pursuit of justice or other values. These themes, threaded through my own analysis of Galtungian peace research, led me to the conclusion that, in spite of an overt value orientation, peace research could not provide an adequate account of its own normative nature.

Turn: FONOPS hurt International law and expose US hypocrisy

Xinhua, January 31, 2016, Commentary: The international-law irony of U.S. provocations in South China Sea, Xinhua News Service, Xinhua is one of the major international and Chinese news providers, news.xinhuanet.com/english/2016-01/31/c_135061532.htm

Washington has long claimed that the so-called freedom of navigation operations by the U.S. military aims to safeguard public access to waters and airspace as allowed by the international law. However, citing seemingly lofty motives will not obscure the fact that the U.S. maneuvers in South China Sea threaten China's sovereignty and security interests, endanger regional peace and stability and constitute a grave violation of the international law. As ironic as it is, Washington has always defended its arbitrary move by referring to international law, but it has so far not approved the United Nations Convention on the Law of the Sea, which establishes legal order and regulations on international waters. The calculation behind such a move is crystal clear: The United States is unwilling to be bound by an international treaty, which it claims as severely flawed, because the sole superpower has already controlled such maritime resources as oil and gas deposits through military power. Another irony is that Uncle Sam asserts that it maintains freedom of navigation in the South China Sea on the legal basis of international law, but it applies standards unilaterally defined by itself. In a document issued in 2015 regarding the so-called freedom of navigation program, the U.S. government said the foremost target of the U.S. action is "excessive maritime claims that are defined by the U.S. side." The document reveals that Washington substitutes its own standard for international law and attempts to unilaterally impose its own idea upon other countries. Moreover, the U.S. action itself to maintain so-called freedom of navigation under international law is a threat to the principles of international law.

**Turn: FONOPS hurt International law – 3 reasons**

The truth is, however, these two accusations are both unfounded and inconsistent with the long-standing U.S. policy on the South China Sea issue. On the one hand, the U.S. declares that it holds no position on the sovereignty issue in the South China Sea, but on the other, it openly challenges China’s sovereignty claims in the area. The mismatch of its words and deeds is a violation of the principle of estoppel in international law. The U.S. accuses China of endangering freedom of navigation in the South China Sea, but instead of providing evidence to prove its point, it only keeps clamoring that China’s island and reef construction in Nansha is “too quick, too much.” The Lassen’s operations in Nansha constitute a grave violation of many principles of international law and norms that the United States has supported over the years, mainly in the following three aspects. First, the U.S. act was an abuse of the rules on freedom of navigation. The U.S. intrusion within 12 nautical miles of China’s Nansha Islands was a typical act of “hazardous passage.” To avoid escalation of conflicts, China has remained restrained on the South China Sea disputes, refraining from publishing the base points and baselines of territorial sea of the Nansha Islands. But China is entitled to its territorial sovereignty and maritime rights and interests, whether the base points and baselines are published or not. Even if we endorse the U.S. claim that Zhuhai Reef, as a low-tide elevation, does not enjoy the right of 12-nautical-mile territorial limits, Zhongye (Thitu) Island near Zhuhai obviously does, and that island is also part of China’s territory. The United States repeatedly drew an analogy between the U.S. intrusion in the waters close to the Nansha Islands and a Chinese naval vessel’s passage within 12 nautical miles of the Aleutian Islands in September, claiming that its activity was “innocent passage.” The fact is, under international law, the Tanaga Pass of the Aleutian Islands is open to international navigation, so “transit passage” rather than “innocent passage” applied to the Chinese warship. The 12 nautical miles of the Nansha Islands, on the other hand, are not part of international pathways. Why did the U.S. vessel choose to take this detour when the international waterway was wide enough for its passage? The U.S. act was obviously an abuse of the rules on freedom of navigation under international law. Second, the U.S. show of force was a breach of its international obligations concerning no use or threat of force. Due to the complicated hydrological regime around the Nansha Islands and diversity of the naval strengths of different countries, China has all along been tolerant to vessels that mistakenly entered waters close to the Nansha Islands. The United States itself also recognizes that it once entered within 12 nautical miles of the Nansha Islands before 2012. But this time, the United States identified a 12-nautical-mile line before declaring its challenge. Its action was intended to negate China’s territorial sovereignty and maritime rights and interests over the islands and reefs in the area, and no doubt posed a blatant military threat to China. It is natural that China and the United States have disputes when it comes to the rules of maritime navigation, but the differences should be resolved through negotiations and consultations. This is the normal international practice for dispute settlement. The U.S. use of force apparently ran counter to the principle of resolving international disputes by peaceful means and its obligations under international treaties, and constituted a gross infringement of the purposes and principles of the United Nations Charter and other international rules and norms. Third, the U.S. act violated China’s territorial sovereignty and eroded the basic principles of international law. Sovereign states are main players in today’s international system, and respect for sovereignty is the basic principle of international law. Previously, the United States had repeatedly emphasized that it held no position on the sovereignty of the Nansha Islands and reefs. But this time, by conducting the so-called freedom-of-navigation operations, the United States intended to negate China’s sovereignty and maritime interests over its long-garrisoned islands and reefs where extension projects were carried out recently. This was a direct provocation against China’s sovereignty. If countries were allowed to willfully challenge the sovereignty claims of other countries, wouldn’t the entire international system be pushed to the verge of collapse? The U.S. act was not only a violation of the principle of estoppel in international law, but also a grave challenge to the sovereignty principle of the international system. In a nutshell, the United States was actually engaged in hegemony and power politics, a prevailing pursuit in the world in the 19th century, under the cloak of the 21st century endeavor of safeguarding freedom of navigation and international justice. This
is sheer hypocrisy. The United States might as well make clear its real intention to the world that it does not want to see any increase of Chinese power in the South China Sea.

Staking legitimacy on economic growth has lead the Chinese Communist Party to the brink of collapse – they are refocusing on nationalism to compensate

Zheng Wang, April 29, 2014, Tiananmen as the Turning Point: China’s Impossible Balancing Act, Time Magazine, Zheng Wang is the Director of the Center for Peace and Conflict Studies Seton Hall University and a Global Fellow at the Woodrow Wilson Center. He is the author of Never Forget National Humiliation: Historical Memory in Chinese Politics and Foreign Relations, which is the winner of the International Studies Association’s Yale H. Ferguson Award, time.com/73594/china-tiananmen-square-25-years-later/

Many of today’s problems, such as corruption, pollution, and the development gap, can also be traced back to the government’s 1989 choice. The economic reform and opening up have brought China unprecedented wealth and power. However, like the recent story of a young Chinese man who sold his kidney to purchase a new iPad, China has paid a very high price with its environment, morality, and society for its development. After 25 years of rapid growth, the new administration has noticed that it is in a difficult situation regarding new sources of economic growth. Following the significant increase of Chinese labor wages, China is losing its competitiveness as the world’s factory. The rapid growth of the real estate market has significantly contributed to China’s GDP growth. However, it is clearer that this path is unsustainable. It has already created a large housing bubble and become a source of social unrest. Moreover, the government has tried to separate domestic politics and foreign policy. So the CCP is embracing nationalism in its domestic politics and using nationalism and patriotic education in order to strengthen the party’s legitimacy as the ruling party and to increase social cohesion. In terms of foreign relations, China has embraced globalism in the past 25 years. The government follows an open door policy, and joined the World Trade Organization. In recent years, however, we can see that this separation has created many problems. For example, the rise of nationalism has influenced China’s foreign policy-making more and more. Influenced by patriotic education and nationalist narratives, the younger Chinese generations have grown more nationalistic, and they strongly criticize the government for being soft in dealing with issues, such as the South China Sea and Diaoyu/Senkaku Islands. The government has already found itself in such a dilemma that it has very little flexibility to deal with external disputes with rising nationalism at home.

Chinese Communist Party stability is on the brink of collapse – CCP distracting the public by refocusing on nationalism

Pei Minxin, November 12, 2015, The Twilight of Communist Party Rule in China, The American Interest, Pei Minxin is an expert on governance in the People’s Republic of China, U.S.-Asia relations, and democratization in developing nations. He currently serves as the director of the Keck Center for International and Strategic Studies at Claremont McKenna College. https://www.the-american-interest.com/2015/11/12/the-twilight-of-communist-party-rule-in-china/

Unfortunately for proponents of the theory of “authoritarian resilience”, their assumptions, evidence, and conclusions have become harder to defend in light of recent developments in China. Signs of intense elite power struggle, endemic corruption, loss of economic dynamism, and an assertive, high-risk foreign policy are all in evidence. As a result, even some of the scholars whose research has been associated with the authoritarian resilience thesis of have been forced to reconsider. It has become increasingly clear that the recent developments that have changed perceptions of the CPC’s durability are not cyclical but structural. They are symptomatic of the exhaustion of the regime’s post-Tiananmen survival strategy. Several critical pillars of this strategy—such as elite unity, performance-based legitimacy, co-optation of social elites, and strategic restraint in foreign policy—have either collapsed or become hollow, forcing the CPC to resort increasingly to repression and appeals to nationalism to cling to power.
CCP Collapse Disadvantage

Conflict with US leads to authoritarianism and collapse

Pei Minxin, November 12, 2015, The Twilight of Communist Party Rule in China, The American Interest, Pei Minxin is an expert on governance in the People’s Republic of China, U.S.-Asia relations, and democratization in developing nations. He currently serves as the director of the Keck Center for International and Strategic Studies at Claremont McKenna College

Manipulating nationalism and muscle-flexing may deliver short-term political benefits, but only at the cost of the CPC’s long-term security. One of the wisest strategic choices made by Deng Xiaoping was to develop friendly ties with the U.S.-led West to accelerate China’s modernization program. In the post-Deng era, Xi’s two predecessors, Jiang Zemin and Hu Jintao, also learned a key lesson from the collapse of the Soviet Union: a strategic conflict with the United States would imperil the very survival of the CPC. The costs of a new arms race would be unbearable, and outright hostility in Sino-U.S. relations would destroy the bilateral economic relationship. It is unclear whether the CPC leadership understands the risks of its new and still-evolving survival strategy. If its members are convinced that only this strategy could save CPC rule, now threatened by the collapse of the key pillars of the post-Tiananmen model, they are likely to continue on the present course. Ironically, such a course, if the above analysis is right, is more certain to accelerate the CPC’s demise than to prevent it.

Showing weakness to foreign powers undermines governmental legitimacy

Dr. Jessica Chen-Weiss, March 4, 2013, Assistant Professor, Political Science, Yale University, “China’s Maritime Disputes in the East and South China Seas,” Testimony in a Hearing Before the U.S.-China Economic and Security Review Commission, p. 64.

Popular nationalism is both a liability and a potential advantage in Chinese diplomacy. Just as the President can point to Congress and say his hands are tied in diplomatic negotiations, so can Chinese leaders point to nationalist sentiment and popular protests. As Deng Xiaoping told Japanese officials in 1987, “In regard to China-Japan relations, reactions among youths, especially students, are strong. If difficult problems were to appear still further, it will become impossible to explain them to the people. It will become impossible to control them [the people]. I want you to understand this position which we are in.” Two years later, the government faced its gravest crisis of legitimacy. Protests against Japan in the fall of 1985 had given way to accusations of government corruption and calls for democracy in 1986 and 1989. For the Chinese leadership, nationalism is both a vulnerability and a source of strength: undermining the government’s legitimacy if seen as weak against foreign insults and provocations, and strengthening its legitimacy if seen as a staunch defender of the nation’s interests.

Successful SCS expansion key to CCP legitimacy

Jihyun Kim, Summer 2015, Territorial Disputes in the South China Sea, Strategic Studies Quarterly, Jihyun Kim is an assistant professor in the Institute of International Studies at Bradley University, IL, where she teaches US-East Asian relations and problems on contemporary Asia. Dr. Kim holds a PhD in political science from the University of South Carolina, where she specialized in international relations and comparative politics. Her major research interests include regional security and major power interactions in East Asia, Chinese and Korean politics and foreign policy, and nuclear security and nonproliferation, www.au.af.mil/au/ssq/digital/pdf/Summer_2015/kim.pdf

In addition, Beijing has resorted to the promise of building a more prosperous economic future together with appeals to Chinese nationalism so as to compensate for increasingly irrelevant communist tenets and to enhance public support for the regime. Yet, this could be a dangerous mixture, given that if Chinese leaders fail to deliver the promise of economic growth, they would be under pressure to depend “even more heavily on nationalist appeals as its sole remaining source of support.” In fact, nationalism can be one of the most powerful domestic sources of territorial expansion, which could be exploited by Chinese leaders to bolster political security at home through uniting the public and diverting their frustrations outward. There are several reasons why nationalism and territory are closely intertwined and can easily provide a justification for the state to take a diversionary action through belligerent expansion. In the case of China, such incentives are particularly strong because of its historical memories of territorial loss and its aspiration to regain the status of a great power after its century of humiliation. In this light, a key aspect of Beijing’s legitimacy stems from protecting national dignity and never again letting China to be bullied. What is more, China’s growing social instability and public discontent, engendered by decades of rapid economic reforms at any cost, have made nationalism even more essential as a substitute for the governing ideology and as a mechanism to unify the country and sustain the legitimacy of the state. Consequently, leaders in Beijing fear that if they show flexibility regarding China’s foreign relations, including its maritime claims in the South China Sea, it could be taken as a sign of disgraceful appeasement and weakness at home. In this view, China’s muscle-flexing foreign policy, including its southward push into the western Pacific, can be seen as a diversionary maneuver to preserve domestic cohesion and unity as well as regime legitimacy.

Consequentialist Impact Scenario – Internal Links

CCP collapse leads to loose nukes

Ryan Kuhns, May 11, 2015, The Communist Party of China and Nuclear Weapons, The Sunday Sentinel, Ryan Kuhns is a Research Associate at PAXsims (strategy simulation company) and former editor at the Patterson School of International Affairs’ magazine ExPatt - his focuses are in security, strategy, defense economy, international relations, politics, and futurism, thesundaysentinel.com/communist-party-china-nuclear-weapons/#.VzD5K0wrKM9

If the CCP’s long slide into the woodchip heap of irrelevance has begun, then the status of a China’s nuclear arsenal, post-CCP, must be considered. There are two broad possibilities. One is that the CCP, through a peaceful transition or a tense downfall, leaves the Chinese national political stage and is replaced by singular power (maybe democratic) which inherits the CCP’s monopoly on force. In this case, the status of China’s nuclear weapons may not be a cause of much anxiety for the nations of the world. That possibility would make this a short blog entry. Let’s consider the disintegration of the Chinese state into multiple factions (as has happened many times in China’s long history), which may be at war with each other. In this scenario, the issue of “loose nukes” would be of great concern to Washington. In order to frame the magnitude of the issue, a short consideration of a situation considered more plausible by the US defense establishment and international relations scholars is necessary. North Korea and Pakistan are often considered to be the two states that are the most likely to collapse and present the international community with a high stakes game of hide and seek. The size of the Pakistani arsenal (100-120 nuclear warheads), and the close proximity of non-state groups that wish to harm the US, makes its case particularly alarming and interesting to see a US response. In Andrew F. Krepinievich’s 2009 book “7 Deadly Scenarios”, he considers the difficulties, for Washington and its allies, of rounding up or destroying nuclear weapons in the case of a collapse of Pakistan. Krepinievich believed, in 2009, that the US military lacks the capabilities to simultaneously snatch and grab all of Pakistan’s nuclear weapons in the event of a collapse. At most, Special Operations forces may be able to carry out 3 simultaneous raids at a time, and this is only if they are deployed in Afghanistan and India with the proper transport. In order to carry out the raids, the military must first know where the nuclear weapons are. This will be the biggest obstacle to recovery and destruction operations in a fractured Pakistan. Even if the US intelligence community is able to utilize existing relationships with the ISI and Pakistani army, and form new ones on an ad hoc basis, the ability of US aircraft to carry out strikes on hardened weapons locations will be hampered by a lack of ordinance (outside of nuclear tipped varieties) able to eliminate all positions. Krepinievich also estimates that stability operations in Pakistan would require “three to four times the size” of the peak US forces deployed to Afghanistan and Pakistan and “some $200 to $400 billion” dollars a year, based on calculations related to the costs of propping up Iraq and Afghanistan. Now, take these issues and apply them to similar operations in a destabilized China. The US would be contending with a modernized military as a significant barrier to its access to secure nuclear weapons. Although, this problem could vary in its intensity based on the coherence of a post-CCP People’s Liberation Army (PLA). Add in the complex (and not fully cooperative) relationship between the PLA and US military. Then, consider the size of China itself, which has 9,326,410 sq km of land to Pakistan’s 770,875 sq km. Even removing the swaths of land that would be unable to host nuclear forces (mobile or otherwise), the level of accurate intelligence required to comb 9.3 million sq km of land for around 250 nuclear warheads is intimidating. Even in the event of perfect intelligence, the ability to deploy Special Operation Forces and Aircraft would be heavily affected by the ability of the US military to move those forces into positions were they could do their jobs. This would be undoubtedly complicated by the nature of the US deployments in the region at the time of a collapse. If the event was sudden and unexpected, this would significantly magnify the issue.
CCP Collapse Disadvantage

Consequentialist Impact Scenario – Impact

Loose nukes are the largest security threat – just one attack tanks the economy and causes hundreds of thousands of deaths

Greg Terryn, October 23, 2015, Hillary Was Right: Rogue Nukes Are a Serious Threat, The National Interest, Greg Terryn is a Scoville Fellow at the Center for Arms Control and Non-Proliferation, nationalinterest.org/feature/hillary-was-right-rogue-nukes-are-serious-threat-14152

What is the greatest threat to national security? According to Democratic frontrunner Hillary Clinton in the first Democratic debate of the 2016 election season, it is the threat of nuclear weapons and material falling into the wrong hands. Former President George W. Bush said the same thing in a previous presidential debate. No matter your opinion of their politics, they are right. Both terrorists and smugglers have expressed interest in such a transfer, and we should consider ourselves lucky that one has yet to occur. How might a terrorist acquire a nuclear bomb or enough nuclear material to create a crude weapon? The most likely scenario involves a terrorist group purchasing or stealing highly enriched uranium (HEU) and developing an improvised nuclear device. With just 25 kilograms of HEU, which could easily fit in a shoebox or backpack, terrorists could make a nuclear weapon capable of inflicting the same devastation as the bombs used at Hiroshima and Nagasaki. With less nuclear material, terrorists could lace conventional explosives with radiological material to create a dirty bomb that would disperse radiological material upon detonation. The results would be devastating: in addition to casualties from the explosion, concerns of radiological fallout would create panic and economic disruption.
Any use of nuclear weapons will escalate and cause extinction – we have an obligation to prevent nuclear omnicide

We have greatly changed our environment with our new destructive tools - nuclear weapons. They have given us a quantum leap in our ability to destroy ourselves and world. Given present trends, we will not adapt, but will continue on the present path to nuclear extinction. However, our brains provide the vital difference between extinct species and us. They can tell us what we have created, and the probable results if we keep repeating our historically destructive behaviour - the thousands of wars in our history. Our unique insight allows us to change our behaviour so we don’t repeat our traditional pattern of destruction with our new earth-destroying tools. We have even recognised the extreme risks to ourselves, by creating treaties committing us to vigorously pursue disarmament steps to abolish nuclear weapons before they abolish us. Unfortunately, we have not observed these treaties. The essential question is: Will we use our brains constructively to solve this problem in time to save ourselves? It seems unlikely. We are using our brains to deny the terrifying reality, pretend there is no risk, or that it is insignificant. Many believe that nuclear weapons have been proven over 50 years to give us security. We tend to venerate our leaders, believe and obey them. Like the Germans did with Adolph Hitler, or Italians with Mussolini. Leaders are respected as rational, sensible, honest, moral Christians who could never do anything crazy. However President Bush - the world’s most powerful man, and his allies and staff, have lowered the barriers against using nuclear weapons. They have developed new doctrines that allow them to use nuclear weapons in many more war situations and against non-nuclear states - not just in retaliation for a massive attack. The U.S. Congress and mass media have skirted this issue, so you may not know about this ‘seismic’ change in U.S. policy and its implications. People have forgot, or never learned, how nuclear weapons can destroy our world. Here is a chart with 6,000 dots divided into 100 squares. The one dot in the centre represents all the explosive power of allied bombs dropped in WWII - equal to 3,000,000 tons of TNT or 3 megatons. Millions were killed. We have enough for about 6,000 WWII’s. The dots in just one of the 100 squares represent the firepower to kill all life on earth. We have made enough weapons to kill everyone on earth many times over. That is our dire situation today. We are not adapting to change our behaviour, but reinforcing old behaviour that leads to war? The nuclear arms race, accelerated by the vested interests of the military-industrial-political complex, and the phantom threats we invent to sustain it, is the major occupation of many top brains and huge resources today. It has huge momentum and power. It is embedded in U.S. society and some others. It is an accepted part of the culture. This weapons culture and the new doctrines mean that nuclear weapons are no longer treated as a last resort. They can be used in addition to conventional weapons to achieve military goals. The culture has programmed itself for self-destruction and now has the ideology to continue until they precipitate a nuclear holocaust which kills all life. The quantum leap in destructive power has now been matched by this new will, or self-permission, to use these weapons. Laws, fears and reservations have been swept aside. Humanity seems to have accepted the new doctrines. Few seem concerned that any usage can kill millions, and quickly expand beyond any countries control, leading to a global nuclear war which ends humanity. We have radically altered our environment in so many other ways as well, that also threaten our existence in the longer term. Population growth and our economic growth ideology augment the trends of climate change - global warming - pollution - dwindling natural resources - deforestation etc. To emphasise again, the biggest change we have made in our environment is the quantum leap in our ability to destroy ourselves. Our psychological and social climate makes it more probable. Most people are not aware of this huge change in our environment. Others just accept it. We have learned to live with and treat nuclear weapons as a normal part of the environment. Many feel that to question or oppose this situation is silly, disloyal or threatens the security we think nuclear weapons give us. Nine countries are dedicated to constantly developing their nuclear arsenals. That makes accidental or intentional usage more likely. That the U.S. has said the nuclear barriers are down adds to the likelihood of nuclear weapons use by some other state. A probable escalation would follow.
CCP Collapse Disadvantage

Deontology Impact Scenario – Impact

Collapse bad – would lead to massive instability and more oppressive successor

Dan Blumenthal & William Inboden, May 8, 2015, Toward a free and democratic China, American Enterprise Institute, Dan Blumenthal is the director of Asian Studies at the American Enterprise Institute. William Inboden is executive director of the Clements Center for History, Strategy, and Statecraft and associate professor at the LBJ School of Public Affairs at the University of Texas-Austin, https://www.aei.org/publication/toward-a-free-and-democratic-china/

In short, China’s ruling structures are brittle, costly, and strained by the corrosive effects of corruption, environmental calamities, and lack of popular consent. The fact that China spends more on internal surveillance and policing than on its military only confirms that the CCP’s greatest fear is of its own citizens, not an external rival like the United States. The real threat to Chinese stability comes from possible state collapse or revolution, without a peaceful civil society to step in and help manage the subsequent vacuum. Adding a freedom prong to the engage and hedge strategy is the most prudent course for dealing with this possibility. It helps answer the question “Then what?” If, through whatever course of events, the CCP were to lose its monopoly on power, what political authorities would emerge to take its place? Right now the CCP is successfully repressing all vestiges of civil society; Burke’s “little platoons” of civic organizations and religious groups that mediate between the individual and the state are nowhere to be found. This does not mean that China’s collapse is imminent. The CCP is resilient and acutely aware of the demise of past authoritarian regimes such as the Soviet Union. That said, when have we ever correctly predicted a massive political change in a major country? Those who fear change in China fear—with justification—an Arab Spring scenario from which something much worse than the current leadership would emerge. But American policy does little to mitigate this scenario. A freedom prong would cultivate and support alternatives in anticipation of the day when the CCP as currently constituted might no longer be in control. How might a greater American effort to support freedom in China affect the overall U.S.-China relationship? Probably less than one might think in the short term, and certainly less than the profound disruption some China experts fear. Beijing can always be counted on to act in its own perceived interest, and the CCP still prioritizes a stable bilateral relationship with the United States. Increased U.S. support for human rights and rule of law programs, and more meetings with dissidents, would doubtless provoke some annoyed démarches from Beijing and the usual grumblings about “meddling in China’s internal affairs,” but little more. The CCP is nothing if not ruthlessly pragmatic. It might note the continued existence of the KMT in Taiwanese politics and prepare itself to compete in real elections. A new China strategy with a freedom prong is a high-risk and high-reward proposition. Before President Obama, all post-Cold War U.S. presidents favored encouraging China’s peaceful evolution. Their mistake was a misreading of past Asian transitions to democracy, which they believed were inevitable. They were not. Instead, American presidents mixed sound political judgment with carrot and stick policies that sometimes risked far worse outcomes. But the reward for their successes is self-evident in our vibrant alliances today with Asian democracies. With China, the United States may be reaching an inflection point. Our present path is likely to lead to a high-risk, volatile rivalry with an increasingly unstable regime. The alternative path holds out the hope of leading gradually to Sino-American comity and an enduring peace. It begins with supporting those Chinese people who seek more freedom and a better future for their country.
Maintaining peace and conditions for harmony is a moral obligation

Gerard F. Powers & Drew Christiansen. 1994, Peacemaking: Moral and Policy Challenges for a New World, United States Catholic Conference, Georgetown University Press, pages 45–46, Gerard Powers is professor of the practice of Catholic peacebuilding at the Kroc Institute. He also coordinates the Catholic Peacebuilding Network; Drew Christiansen, S.J., is Distinguished Professor of Ethics and Global Development in Georgetown University's School of Foreign Service and co-director of the Program on the Church and the World at the Berkeley Center, where he is a senior research fellow, https://books.google.com/books?id=xp6JwmU4IXUC&pg=PA46&lpg=PA46&dq=%22create+peace%22+%22moral+obligation%22&source=bl&ots=01kMwHsST7&sig=xpfCV- RYdFyW83v6NOAZF6u6zIQ&hl=en&sa=X&ved=0ahUKEwjLlOTrhrXAhOAhVUMAKHbWMDxkQ6AEIH5UAEwI#v=onepage&q=%22create%20peace%22%20%20moral%20obligation%22&f=false

Even in the context of condemning war in the strongest possible terms, these texts do not refer to peace as a residual category. "Peace is not merely the absence of war." This point deserves emphasis because we automatically associate "the end of war" with "peace." Recall, for example, powerful images in the collective American memory of the explosion of joy in Times Square, August 1945, at the end of World War II. Certainly, the moral obligation to end war commands the highest urgency. However, ending war does not automatically create peace. It may afford a particularly promising opportunity to construct peace -- one we may choose either to act upon or to squander. The obligation to act upon -- not squander -- such an opportunity also commands the highest moral urgency. For that matter, the obligation to make peace has urgent priority even when there is no obvious opportunity to do so.

History proves current polls are predictive

General-election matchup polls (e.g. Clinton v. Trump) started to become informative in February. In May, they tell us quite a lot – and give a way to estimate the probability of a Hillary Clinton victory. First, let us examine the primary evidence. Wlezien and Erikson have gathered presidential preference polls from 1952-2008. These graphs show that during the year of the general election, polls gradually converge to a point that is close to the actual November outcome. Wlezien and Erikson expressed their findings in terms of correlation coefficients. In early February (about 280 days from the election), the correlation between polls and November outcomes is +0.2, where 0.0 corresponds to no relationship and +1.0 indicates a perfect relationship. The correlation rises to +0.9 by October. However, this measure is not easily used by consumers of polls. Instead, a more intuitive measure is how far polls tend to move over time. To calculate this box-and-whisker plot I also included 2012 data (spreadsheet here). Positive values indicate that the Democratic candidate did worse in November than in polls. The box indicates the interquartile range, i.e. the middle 50%, and the whiskers indicate the range. The red points indicate two outliers: the elections of 1964 (Johnson v. Goldwater) and 1980 (Carter v. Reagan v. Anderson). In May, polls overestimated support for the Democratic candidate by over 10 percentage points. For obvious reasons, Republican-leaning pundits like to write about 1980. But that is one case out of 16 elections. Instead of such cherrypicking, it is more accurate to include them as part of an analysis of all 16 elections. The full range and estimated standard deviation of poll-outcome differences looks like this: On average, polls have little or no bias relative to November, but have some variation, which is what we care about. That variation is quantified by the standard deviation (SD). I estimated SD using median absolute deviation (MAD), and verified this approach using interquartile range divided by 1.35. For March and April, the standard deviation is around 4 percentage points.

Polls are super accurate – their authors overhype the errors

Andre Tartar & Ben Brody, May 3, 2016, The 2016 Guide to Political Predictions, Bloomberg Politics, Andre Tartar is Economic Data Editor at Bloomberg News; Ben Brody is a contributor to Bloomberg Politics with a focus on Washington DC; www.bloomberg.com/politics/articles/2016-05-03/the-2016-guide-to-political-predictions-which-matter-and-who-was-most-underestimated

For political junkies, polls and predictions are almost irresistible. But they can also overload us with information that’s at best confusing and at worst wrong. Recent high-profile polling misses—from Israel and the U.K. to Michigan—have prompted concerns that election results can no longer accurately be forecast by surveying the electorate and that technological change is causing an irreversible decline in the industry. That’s why Bloomberg Politics undertook an analysis of hundreds of polls, as well as several common prediction models, at use in the 2016 presidential race. The analysis examined 258 final projections covering 78 state primaries or caucuses—excluding the District of Columbia and overseas territories—from four predictors: RealClearPolitics, an aggregator of statewide polls; PredictWise, an aggregator of betting-market data; FiveThirtyEight, whose "poll-plus" prediction model considers statewide polls, national polls, and endorsements; and Bing Predicts, which combines prediction market data, polling, internet queries, and social media posts. The analysis showed how often readers can trust polls and other predictions, when they’re most reliable (hint: later in the primary calendar), and which specific candidates have been most discounted this cycle. Turns Out, the 2016 Polls Haven't Been That Bad. There's good news for those still looking to polls for insight: In our study, polls, particularly when taken in aggregate, remain a very accurate way to predict elections, and big discrepancies between polls and results are more the exception than the rule. Of the 524 individual poll predictions collected by RealClearPolitics and HuffPost Pollster conducted within one month of a state primary or caucus, 450 of them (86 percent) correctly forecast the eventual winner. When we strip out the two biggest misses for polling this cycle, the Iowa Republican caucuses and the Michigan Democratic primary, where 33 out of 38 poll predictions missed the mark, this increases the overall accuracy rate to 92 percent.

Trump will use plan for China bashing to stoke populist sentiments and sway voters in the election

The United States presidential election is now in full swing, with both parties going all out in a feverish effort to gain the upper hand. The 2016 vote is watched very closely all over the world, because whoever occupies the White House next January is going to face a fast-changing world with multiple challenges crying out for active American involvement and a more isolationist and inward-looking America unwilling to take on the role of “world policeman”. Before we delve deeper into the impact of the election on China and US-China relations for the coming years, there is a need to offer a brief analysis of what insight this election process has brought us into the American psyche. First and foremost, it has laid bare the rising populist sentiments that are oozing out every pore of American politics both domestic and international. One example is the Republican candidate Donald Trump whose fiery words on immigration and Muslims has won him high approval ratings even though those words are obviously on the extreme end of populism. Three Republican candidates, Trump, Cruz and Carlson, are considered politically extreme but have consistently won as a group over 50% support among Republican voters based on recent polls. It shows that voters are rejecting traditional candidates. What it reveals is that men-on-the-street in America are simply tired of traditional politics and politicians. The fact that Jeb Bush falls behind Trump therefore comes as no surprise. Populist sentiments reflect the unhappiness ordinary people have harbored against status quo where American economy is still under the shadow of financial crisis and slow recovery as well as enfeebled responses of the American government in the face of global challenges. To put it in perspective, they represent the frustration and anxiety of American people feel about the changed and still fast changing world they live in. The American supremacy and sense of safety both physical and economic is threatened. That’s the essence of what people fear. Here comes China, whose economic growth and military modernization in recent years represents, to American people, a world that undergoes rapid changes and evolves to a multipolar one where the US is no longer being able to call shot on everything. The resentment against globalization is on the rise. Overall strategic retrenchment and an emphatic shift to focus more on China are taking place simultaneously. “Scapegoating” China is inevitable, “China has taken jobs away from American workers”. “China is manipulating its currency to gain advantage in trade”. “China is being aggressive in the South China Sea and trying to drive the US out of the Western Pacific”. The list of complaints can go on and on. It doesn’t matter whether those accusations and complaints are true or not to American politicians and voters as long as they have “election value”. For instance, the renminbi has appreciated against the US dollar to the tune of 30% since 2008, but voices are still strong in America calling for the RMB to appreciate further. We all know from experience that China-bashing is common and “cost-free” in US elections. This time around is no different. What is different is that while without agreeing to the concept of “G2”, there is a broad recognition that the US and China are the two major powers in today’s world. It is no hyperbole to say that nothing gets done without close cooperation between the two nations, be it climate change, energy security, non-proliferation of WMD, etc. In this connection the US election does have an impact on China and US-China relations as noted by Robert Manning, who said the US-China relationship enters “dangerous waters” in 2016.

Voters PERCEIVE plan as appeasement, weak on china, and ineffective – electorate favors isolationism

The difficulty of moving beyond current policy Despite the questionable premises underlying much of prevailing U.S. policy toward China, policymakers and commentators find it difficult to move beyond existing views. There are several reasons why this is so. To begin with, current policy is complex. It stresses preparation for a security threat from China at the same time as it promotes U.S. business interests there. It protects uncompetitive American companies from the adverse effects of China’s rapidly growing economy (unintentionally creating a nationalist backlash in Beijing) while largely ignoring China’s domestic political system. The seemingly contradictory elements of U.S. policy—in the face of real uncertainty about the direction of China’s military, economic and political development—mask the true dangers and weaknesses of the overall U.S. approach. A second reason why policymakers and commentators find it difficult to move beyond existing China policy is that groups with vested interests have a stake in its various components. These groups attempt to mold public opinion by defining “acceptable” and “mainstream” views of China, which provide strong support for the existing policy framework. This is especially true of security policy, where hawks who believe in a coming military clash with China also argue that the U.S. should pursue a military buildup to prepare for it. Not surprisingly, the military services and defense contractors in the United States are important members of the political constituency that favors an aggressive security strategy toward China. The specter of a large and amorphous “China threat” has proved useful as a replacement for the “Soviet threat” to spur the Pentagon’s acquisition of advanced weapons systems, especially at a time of overall defense budget cuts. Another group with a vested interest in a hard line security policy is the traditional “China lobby” (originally strong supporters of the anticommunist regime that led Taiwan after the Chinese revolution in 1949) which has concentrated in recent years on ensuring the U.S. supplies large quantities of high-quality weapons and military equipment to Taiwan to deter and defend against a possible Chinese attack. Perhaps the overriding reason why many policymakers and commentators cannot easily move beyond existing views of China is that they do not sufficiently factor into their analysis the major security, political and economic benefits that the United States and its Asian allies could achieve through improved U.S.-China relations. Many commentators tend to emphasize worst-case scenarios and pessimistic assessments which are seen by the media as “sober-minded” and “realistic.” It seems fruitless to these analysts to describe future benefits from a state of affairs that they believe will likely never come to pass. Influenced by the “tyranny of the status quo,” policymakers and commentators often feel the best they can do is to propose incremental changes that could achieve small policy improvements over time. U.S. politicians who attack Beijing for economic practices that lead to “shipping American jobs to China” also discourage policymakers and experts from highlighting the benefits of improved relations between the two countries. When these politicians exploit patriotic feelings and engage in demagogic “China bashing” to attract votes, they have a chilling effect on policy analysts. In this atmosphere, proposals that could significantly improve relations become vulnerable to political attacks as “appeasement,” “un-American” or “weak on China.” Conversely, highly questionable protectionist measures to help uncompetitive companies are seen as “tough” and “pro-American.” The upshot is that the acceptable bounds of the policy debate on China are far narrower than they ought or need to be.

Increased spending brings out the Tea Party coalition – doesn’t matter who it affects

Nella Van Dyke & David S. Meyer, Feb 24, 2016, Understanding the Tea Party Movement, Nella Van Dyke is a professor of sociology whose research focuses on social movements and hate crime, with an emphasis on how characteristics of the social environment influence levels of collective action, David S Meyer is a Professor of sociology at University of California, Irvine who specializes in Social Movements, Public Policy, Peace & War, Social Justice, https://books.google.com/books?id=BQCgCwAAQBAJ&pg=PA27&lpg=PA27&dq="economic+stimulus"+"voter+turnout"&source=bl&ots=QZIW7xjMHF&sign=reVomHakZ2B_Te_Mw2Oed8br8r8c&hl=en&sa=X&ved=0ahUKEwjPptzbn7fOAhiXMCMhKHMNAfc4FBDoAQhCMAC#v=onepage&q=%22government%20spending%22&f=true

I see many similarities between the rise of the Tea Party and the rise of the Ku Klux Klan in the early 1920s. The Tea Party movement emerged in the midst of the most severe economic recession since the Great Depression of the 1930s. Because of the depth of the recession, economic power devaluation was experienced broadly in the United States. Workers faced declining demand for their labor as unemployment rates soared. Owners of large corporations faced a global decline in demand for their products. As the economic crisis deepened, demand for services and commodities provided by middle-class professionals and small-business owners declined sharply. Notably, however, Tea Party activists vociferously argue against expanded government aid to benefit those who are feeling the brunt of the economic decline. As was the in the 1920s, many in the middle class sense that any government response to the economic crisis would disproportionately benefit other social groups at their expense. While economic pain resulting from the great recession has been widespread and has undoubtedly affected some members of the Tea Party, supporters of the movement are not drawn from those who are in the greatest need of aid. The movement's central message - cut taxes and cut spending - resonates most strongly, with those who are doing fairly well in spite of the great recession and do not want to bear the burden of supporting those who have not fared well. Political Power Devaluation While many Americans experienced economic power devaluation during and after the recent recession, the co-occurrence of political power devaluation for core Tea Party constituents, I believe, is key to understanding the movement’s rapid growth. As Democrats assumed the leadership of both the House and the Senate, and with Democrat Barack Obama elected as president, all signs indicated that government would enact progressive legislation in response to the crisis that began then Republican George W. Bush was president. It should be noted, however, that the Tea Party anger began brewing before Obama took office, in response to bailouts of endangered financial institutions enacted at the end of the Bush presidency. In the early months of the Obama presidency, conservative fears were realized as the Obama administration pushed through a major economic stimulus bill and launched its effort to enact major health care reform. Good arguments, of course, can be made for increasing government spending during a severe recession and targeting the spending toward poor and middle-class individuals who will the most likely to immediately spend any government funds that come their way. Yet much like the 1920s Klan, many of those who were in the least need of governmental aid—for example those who remained employed and already had quality health care reacted negatively to the prospects of government funds being directed toward other social groups.

New spending is key – increased spending spurs the key suburban Republican vote

No doubt these are important issues to various constituencies. But, the merits of the issues aside, If Republicans believe that the key to victory this year is to refight the culture wars, they are mistaken. Today, the Republican base is fired up, and Democrats are dispirited. To see how important that is, look no further back than 2008, when overall Republican voter turnout was down by 1.5 percent. Putting this in perspective, in the crucial swing state of Ohio, Barack Obama received 40,000 fewer votes in 2008 than did John Kerry in 2004. Yet, Obama carried the state while Kerry lost it. Despite their repeated threats to stay home if Republicans deviated from a commitment to conservative social issues, it wasn’t the Religious Right that deserted Republicans in 2008 (or 2006, for that matter). Turnout among self-described members of the Religious Right remained steady from 2004 to 2008, and these voters remained loyally Republican. Roughly 70 percent of white evangelicals and born-again Christians voted Republican in 2006, and 74 percent in 2008, essentially in line with how they have been voting for the past two or three decades. It was suburbanites, independents, and others who were fed up with the Republican drift toward big government who stayed home — or, worse, voted Democratic in 2008. Republicans carried the suburbs in both 2000 (49 to 47) and 2004 (52 to 47), but in 2008, suburban voters — notably wealthy, college-educated professionals, many of whom consider themselves moderate on social issues but economically conservative — voted for Barack Obama by a margin of 50 to 48. The switch among voters in the suburbs of Columbus, Charlotte, and Indianapolis, for instance, was largely responsible for moving Ohio, North Carolina, and Indiana into the Democratic column. Democrats also continued their gains in the more independent, libertarian West. These independent and suburban voters are now regretting their Democratic flirtation. They didn’t vote for record deficits, the health-care bill, bailouts to banks and auto companies, or cap-and-trade. Having rejected big-government conservatism, they never realized they were going to get even-bigger-government liberalism. But these voters are not culture warriors. Polls show that while they are fiscally conservative, and very upset by excessive government spending and rising deficits, they are socially moderate, tending toward indifference or even support on issues like gay marriage. It is true that many vulnerable House Democrats this year represent culturally conservative districts. But those Democrats are likely to share the same positions on social issues as their Republican opponents. One is not likely to get to the right of, say, Tom Perriello (D., Va.) on social issues. But if cultural issues come to dominate the fall campaign, it could hurt Republican candidates in more moderate suburban districts — candidates like, say, Keith Fimian, who is challenging Gerry Connolly in northern Virginia. On the other hand, both Connolly and Perriello voted for the stimulus, the health-care bill, and cap-and-trade. If one needs a template for victory, Republicans need look no further than last year’s gubernatorial elections in Virginia and New Jersey. Bob McDonnell and Chris Christie did not run as culture warriors. Instead they won their upset victories on issues like jobs, the economy, and a commitment to limited government. The polls are overwhelming. Those are the issues that voters care about, not whether two men in California get married. Republicans should focus on creating jobs, reducing spending, repealing Obamacare, and cutting the size of government — and leave the culture wars for another day.

Consequentialist Impact Scenario – Internal Links

Trump presidency leads to allied nuclear proliferation

Although history suggests that proliferation is not inevitable, recent research on nonproliferation suggests that Trump’s proposed foreign policy might make it so. Trump says he would scale back or entirely end U.S. alliance commitments unless our allies made major financial concessions. In his interview with the Times, Trump said that the United States “take[s] tremendous monetary hits on protecting countries” such as Japan, South Korea, Germany and Saudi Arabia. He also denounced the U.S.-Japan Mutual Security Treaty as “one-sided,” said that the United States doesn’t need to maintain forces in South Korea and described the North Atlantic Treaty Organization as “obsolete.” But if those security institutions and military deployments disappeared, U.S. allies — including Japan and South Korea — might well pursue nuclear weapons of their own. Recent research shows that alliances are a powerful tool for preventing proliferation, both because they reassure states that their security will be protected in case of attack and because they give senior partners the leverage to restrain their allies’ nuclear ambitions. Research also demonstrates that the type of U.S. troop withdrawals Trump envisions have a history of prompting allies to consider developing their own nuclear weapons. Consider the last time the United States had a president who was skeptical about nonproliferation and who tried to reduce U.S. commitments to its allies in Asia. As part of his Guam Doctrine — a plan to increase Asian allies’ military self-reliance — President Nixon withdrew 20,000 troops from South Korea. Famously, he also traveled to China to improve Sino-American relations. As a result, South Korea launched a covert nuclear weapons program, and Taiwan ramped up its own nuclear ambitions. So why didn’t they end up with nuclear weapons? The administrations that followed Nixon’s redoubled efforts to stop them. Research does not support the idea that the spread of nuclear weapons is inevitable. But isolationist “America First” policies could prompt that spread. Defining U.S. strategic interests primarily in terms of monetary gain, and curtailing U.S. global engagement toward that end, would boost the probability that our allies would respond by going nuclear.

Trump supports nuclear proliferation

Lewis Jacobson, June 6, 2016, Hillary Clinton says Donald Trump argued U.S. should ‘encourage’ Japan to get nuclear weapons, Politifact, Louis Jacobson is the senior correspondent for PolitiFact and a staff writer for the Tampa Bay Times. He has served as deputy editor of Roll Call and as founding editor of its legislative wire service, CongressNow. Earlier, he spent more than a decade covering politics, policy and lobbying for National Journal magazine, www.politifact.com/truth-o-meter/statements/2016/jun/06/hillary-clinton/hillary-clinton-says-donald-trump-argued-us-should/

Clinton took Trump to task for saying that the United States should "encourage" Japan to get nuclear weapons. Trump used vague and contradictory language, but it’s a fair reading to say his words amounted to encouragement. On more than one occasion, Trump publicly said that Japan, and the United States, might be better off if Japan had nuclear weapons, and he declined multiple attempts by interviewers to backtrack from that view. We rate Clinton’s statement Mostly True.

Nuclear proliferation would be disastrous – multiple scenarios for nuclear war

A new nuclear-arms race, moreover, could be even riskier than the one Reagan and others worked so hard to end. In retrospect, the Cold War standoff between two massive, nuclear-armed superpowers offered some stability; among other things, the fact that the United States and the Soviet Union could destroy each other, or any other challenger, in a nuclear confrontation ended up preventing either side from using nuclear weapons. Global alliances were structured in a bipolar system, with smaller powers picking one side or the other, which meant fewer possible avenues for conflict. But that world came to an end when the Cold War finished. We now live in a multipolar world that is, in many ways, a more dangerous one. Former Secretaries of State Kissinger and George Shultz, former Secretary of Defense William Perry, and Senator Sam Nunn warned in 2011 that “the growing number of nations with nuclear arms and differing motives, aims and ambitions poses very high and unpredictable risks and increased instability.” One particularly risky and region right now is East Asia, where competing territorial claims and an unpredictable North Korea threaten to flare into conflict. If Japan, which is revising its pacifist post-World War II foreign policy toward a more assertive one, or South Korea, where there is broad popular support for weaponization, go nuclear, the races grow for a regional arms race—and for nuclear war. Trump has begun to style himself as a foreign-policy realist. But he’s not a realist—he’s a radical. One possibility, as Mark Fitzpatrick of the International Institute for Strategic Studies noted: “North Korea might be tempted to launch a preemptive attack at a time when the U.S. defense commitment [to South Korea] might no longer apply.” But even “short of this worst-case scenario, rather than negotiate disarmament, North Korea more likely would claim the South’s actions as a justification for stepping up its own nuclear program.” These are by no means the only risks. There is, for example, the risk of an accidental firing or a rogue officer deciding that he or she wants to launch a nuclear weapon. There is the risk of “loose nukes” falling into the wrong hands, and the risk that individual scientists will be willing to transfer nuclear technology to the highest bidder, as Pakistan’s A.Q. Khan did in selling nuclear technology to Iran, Libya, and North Korea.

Consequentialist Impact Scenario - Impact

Allied proliferation increases the risk of escalation and nuclear war

Scholarship also importantly suggests that nuclear allies present dramatically different risks for the United States and the world than do non-nuclear allies. The United States often extends security to allies in dangerous neighborhoods in the hope that this protection can curb conflict, reduce tension, and mitigate the need for an ally to develop their own nuclear weapons. No doubt regional nuclear proliferation would significantly change this calculus. More nuclear allies could mean more chances for escalatory conflict, arms-racing among adversaries, and nuclear accidents that pose significant and unnecessary risks to U.S national and international security. Given these concerns and the ever-growing threats to international stability and security that the United States and other countries face every day, it is imperative that the next U.S. president and her/his foreign policy remain focused on stopping the spread of nuclear weapons as it has successfully done (notwithstanding a few notable exceptions) for the past 70 years.

Consequentialist Impact Scenario - Framing

Any use of nuclear weapons will escalate and cause extinction – we have an obligation to prevent nuclear omnicide

We have greatly changed our environment with our new destructive tools - nuclear weapons. They have given us a quantum leap in our ability to destroy ourselves and world. Given present trends, we will not adapt, but will continue on the present path to nuclear extinction. However, our brains provide the vital difference between extinct species and us. They can tell us what we have created, and the probable results if we keep repeating our historically destructive behaviour - the thousands of wars in our history. Our unique insight allows us to change our behaviour so we don't repeat our traditional pattern of destruction with our new earth-destroying tools. We have even recognised the extreme risks to ourselves, by creating treaties committing us to vigorously pursue disarmament steps to abolish nuclear weapons before they abolish us. Unfortunately, we have not observed these treaties. The essential question is: Will we use our brains constructively to solve this problem in time to save ourselves? It seems unlikely. We are using our brains to deny the terrifying reality, pretend there is no risk, or that it is insignificant. Many believe that nuclear weapons have been proven over 50 years to give us security. We tend to venerate our leaders, believe and obey them. Like the Germans did with Adolph Hitler, or Italians with Mussolini. Leaders are respected as rational, sensible, moral Christians who could never do anything crazy. However President Bush - the world’s most powerful man, and his allies and staff, have lowered the barriers against using nuclear weapons. They have developed new doctrines that allow them to use nuclear weapons in many more war situations and against non-nuclear states - not just in retaliation for a massive attack. The U.S. Congress and mass media have skirted this issue, so you may not know about this ‘seismic’ change in U.S. policy and its implications. People have forgot, or never learned, how nuclear weapons can destroy our world. Here is a chart with 6,000 dots divided into 100 squares. The one dot in the centre represents all the explosive power of allied bombs dropped in WWII - equal to 3,000,000 tons of TNT or 3 megatons. Millions were killed. We have enough for about 6,000 WWII’s. The dots in just one of the 100 squares represent the firepower to kill all life on earth. We have made enough weapons to kill everyone on earth many times over. That is our dire situation today. We are not adapting to change our behaviour, but reinforcing old behaviour that leads to war? The nuclear arms race, accelerated by the vested interests of the military-industrial-political complex, and the phantom threats we invent to sustain it, is the major occupation of many top brains and huge resources today. It has huge momentum and power. It is embedded in U.S. society and some others. It is an accepted part of the culture. This weapons culture and the new doctrines mean that nuclear weapons are no longer treated as a last resort. They can be used in addition to conventional weapons to achieve military goals. The culture has programmed itself for self-destruction and now has the ideology to continue until they precipitate a nuclear holocaust which kills all life. The quantum leap in destructive power has now been matched by this new will, or self-permission, to use these weapons. Laws, fears and reservations have been swept aside. Humanity seems to have accepted the new doctrines. Few seem concerned that any usage can kill millions, and quickly expand beyond any countries control, leading to a global nuclear war which ends humanity. We have radically altered our environment in so many other ways as well, that also threaten our existence in the longer term. Population growth and our economic growth ideology augment the trends of climate change - global warming - pollution - dwindling natural resources - deforestation etc. To emphasise again, the biggest change we have made in our environment is the quantum leap in our ability to destroy ourselves. Our psychological and social climate makes it more probable. Most people are not aware of this huge change in our environment. Others just accept it. We have learned to live with and treat nuclear weapons as a normal part of the environment. Many feel that to question or oppose this situation is silly, disloyal or threatens the security we think nuclear weapons give us. Nine countries are dedicated to constantly developing their nuclear arsenals. That makes accidental or intentional usage more likely. That the U.S. has said the nuclear barriers are down adds to the likelihood of nuclear weapons use by some other state. A probable escalation would follow.

Trump would be uniquely bad for minorities

Kevin Drum, February 29, 2016, Super Tuesday Is Looking a Lot Like Super Trumpday, Mother Jones, Kevin Drum is a nationally recognized political blogger and writer for Mother Jones magazine, www.motherjones.com/kevin-drum/2016/02

This is an enticing argument, but it's also dangerous. For months, we've been warning that Trump would be a uniquely dangerous president. He's a serial liar. He's a demagogue. He's a racist and a xenophobe. He appeals to our worst natures. He'd blithely enact ruinous policies simply because his vanity makes him immune to advice and policy analysis. He'd appoint folks who make Michael Brown look like Jeff Bezos. He would deliberately alienate foreign countries for no good reason. He'd waste money on pet projects like border walls and huge military buildups that would likely have no appreciable effect. And while that volatile personality of his probably wouldn't cause him to nuke Denmark, you never know, do you? No liberal wants to see a conservative in the Oval Office. Not Rubio, not any of the others. But there's a difference between accepting an ordinary member of the opposition party and accepting a fatuous clown like Donald Trump. The former will enact lots of policies we hate, but that's democracy for you. We've been through it before and we'll go through it again. The latter is a mockery of everything democracy stands for. Even if you assume that Marco Rubio might be more technically destructive of liberal policies than Trump—an unlikely but admittedly possible outcome—Trump would be more destructive of the very core of liberalism. If we're willing to accept bigotry and belligerence and just plain inanity—along with the small but genuine chance of something truly catastrophic taking place on his watch—just for the sake of maybe getting a slightly better outcome on a few liberal policies, we really ought to just hang it up.

Trump’s policies spur white nationalist fervor

Beth Reinhard, May 17, 2016, White Nationalists See Advancement Through Donald Trump’s Candidacy, Wall Street Journal, Beth Reinhard covers national politics and the 2016 presidential campaign. She previously worked at National Journal, where she was the lead political correspondent during the 2012 presidential campaign, www.wsj.com/articles/white-nationalists-see-advancement-through-donald-trumps-candidacy-1463523858

White nationalists are hailing Donald Trump’s elevation to presumptive Republican presidential nominee, while also trying to boost their own political profiles and activity. Although Mr. Trump has spurned these extreme groups’ support, the level of interest within them for the White House candidate rivals that for segregationist George Wallace, who won five states in the 1968 election, and for conservative Republican Pat Buchanan, who denounced multiculturalism in the 1990s. Mr. Trump is being heralded by these groups for his proposals to bar Muslim immigrants, deport millions of people living illegally in the U.S., and build a wall along the southern border. “White men in America and across the planet are partying like it’s 1999 following Trump’s decisive victory over the evil enemies of our race,” wrote Holocaust denier Andrew Anglin, who calls Mr. Trump “the Glorious Leader” on his Daily Stormer website, after the candidate all but sewed up the GOP nomination on May 3. While his policy prescriptions proved popular with GOP primary voters, Mr. Trump is now the presumptive nominee of a party that has struggled in recent presidential elections to expand its appeal beyond white voters. At the same time, his hard-line immigration policy and high profile are big lures for extreme groups seeking to elevate their status and views. Campaign spokeswoman Hope Hicks said Mr. Trump “has disavowed and will continue to disavow the support of any such groups associated with a message of hate.” The businessman isn’t the only candidate who has attracted white supremacists. Ku Klux Klan leader Will Quigg of California, who last year backed Mr. Trump on Twitter, told the Telegraph newspaper in March that he wants Democrat Hillary Clinton to win. The Clinton campaign rejected that support. Last year, Texas Sen. Ted Cruz brushed off donations to his presidential campaign from Earl Holt III, leader of a white supremacist group that authorities allege was cited as an inspiration by Dylann Roof, the man charged with killing nine people at a historically black church in Charleston, S.C., in June 2015. The campaign said it refunded $2,300 to Mr. Holt and sent $2,700 as a donation to a fund set up for the families of the church-shooting victims. It also isn’t the first time the KKK tried to align with a nominee in the modern era. Klan leaders in 1984 tried to throw their support publicly to President Ronald Reagan, who rebuffed their overtures. Mr. Trump earlier this year drew criticism for his hesitation to disavow the support of David Duke, a former KKK leader and former state representative from Louisiana. But earlier this month, after Mr. Duke described Mr. Trump’s success as overcoming “these Jewish supremacists who control our country,” Mr. Trump said, “Anti-Semitism has no place in our society, which needs to be united not divided.” He also returned a $250 contribution in February from white nationalist leader William Johnson, whom the campaign listed among its California GOP convention delegates before striking him from the list last week. Mr. Trump’s rejections have failed to deter support from leaders of what civil-rights groups label “right-wing hate groups.” These groups’ websites, radio shows and podcasts are filled with praise for Mr. Trump’s views on immigration, appeals to vote for him and calls to volunteer for his campaign. Some white nationalist leaders have boasted online about attending his rallies, either as supporters or as journalists, and say the traffic on their websites is increasing since the rise of Mr. Trump. “Trump’s candidacy has absolutely electrified the radical right,” said Mark Potok, a senior fellow at the Southern Poverty Law Center, a civil-rights organization that tracks extremist groups.

Deontology Impact Scenario - Framing

We have a moral obligation to treat individuals with full dignity and respect — anything less is the road to tyranny and sacrifice.

Shue 1989 – Henry Shue is a Professor of Ethics and Public Life at Princeton University, Nuclear Deterrence and Moral Restraint: Critical Choices for American Strategy, pp. 141-2,

Given the philosophical obstacles to resolving moral disputes, there are at least two approaches one can take in dealing with the issue of the morality of nuclear strategy. One approach is to stick doggedly with one of the established moral theories constructed by philosophers to “rationalize” or “make sense of” everyday moral intuitions, and to accept the verdict of the theory, whatever it might be, on the morality of nuclear weapons use. A more pragmatic alternative approach assumes that trade-offs in moral values and principles are inevitable in response to constantly changing threats, and that the emergence of novel, unforeseen challenges may impel citizens of Western societies to adjust the way they rank their values and principles to ensure that the moral order survives. Nuclear weapons are putting just such a strain on our moral beliefs. Before the emergence of a nuclear-armed communist state capable of threatening the existence of Western civilization, the slaughter of millions of innocent human beings to preserve Western values may have appeared wholly unjustifiable under any possible circumstances. Today, however, it may be that Western democracies, if they are to survive as guardians of individual freedom, can no longer afford to provide innocent life the full protection demanded by Just War morality. It might be objected that the freedoms of Western society have value only on the assumption that human beings are treated with the full dignity and respect assumed by Just War theory. Innocent human life is not just another value to be balanced side by side with others in moral calculations. It is the raison d’être of Western political, economic, and social institutions. A free society based on individual rights that sanctioned mass slaughter of innocent human beings to save itself from extinction would be “morally corrupt,” no better than soviet society, and not worth defending. The only morally right and respectable policy for such a society would be to accept destruction at the hands of tyranny, if need be. This objection is partly right in that a society based on individual rights that casually sacrifices innocent human lives for the sake of common social goods is a contradiction in terms. On the other hand, even Just War doctrine allows for the unintentional sacrifice of some innocent human life under certain hard-pressing circumstances. It is essentially a consequentialist moral doctrine that ascribes extremely high – but not absolute – value to innocent human life. The problem for any nonabsolute moral theory, of course, is where to draw the line.

US already doing a lot in South China Sea

Eric Gomez, APRIL 12, 2016, Calls to “Do More” in the South China Sea Miss Bigger Questions, Cato Institute, Eric Gomez is a Research Associate for defense and foreign policy studies at the Cato Institute. His academic and professional research focuses on regional security issues and U.S military strategy in East Asia, with a focus on maritime territorial disputes and China’s military modernization, www.cato.org/blog/calls-do-more-south-china-sea-miss-bigger-questions

It is difficult to determine what exactly “more” means given the already high level of U.S. activity in the SCS since the USS Lassen conducted a freedom of navigation operation (FONOP) in late October 2015. Since then, the U.S. Navy has conducted another FONOP in addition to other patrols involving aircraft carrier strike groups. Additionally, Philippine-U.S. military cooperation has reached its highest point since American forces were ejected from the country in 1991. Notable examples of cooperation are the recently finalized agreement for the U.S. military to set up “permanent logistics facilities” at five Filipino air bases, and tens of millions of dollars in military aid to improve the Philippines’ maritime patrol and surveillance capabilities.

The US is already increasing deployment in the South China Sea

Efforts by the Obama administration to enhance America’s strategic position in Southeast Asia have been considerable: expanding and diversifying U.S. force posture, strengthening our alliances, building partner capacity, engaging regional institutions and providing forward-deployed U.S. forces with the newest and most advanced capabilities. Accompanying this has been intensive diplomacy in the region, including with China. And yet none of this has been sufficient to stop or deter China from proceeding apace with its land reclamation activities.
Non-Unique: US is in charge and will continue to be

Salvatore Babones June 11, 2015. American Hegemony Is Here to Stay, The National Interest, Salvatore Babones is an associate professor of sociology and social policy at the University of Sydney and an associate fellow at the Institute for Policy Studies, nationalinterest.org/feature/american-hegemony-here-stay-13089

When the Soviet Union finally disintegrated in 1991, American hegemony was complete. The United States sat at the top of the international system, facing no serious rivals for global leadership. This “unipolar moment” lasted a mere decade. September 11, 2001, signaled the emergence of a new kind of threat to global stability, and the ensuing rise of China and reemergence of Russia put an end to the era of unchallenged American leadership. Now, America’s internal politics have deadlocked and the U.S. government shrinks from playing the role of global policeman. In the second decade of the twenty-first century, American hegemony is widely perceived to be in terminal decline. Or so the story goes. In fact, reports of the passing of U.S. hegemony are greatly exaggerated. America’s costly wars in Iraq and Afghanistan were relatively minor affairs considered in long-term perspective. The strategic challenge posed by China has also been exaggerated. Together with its inner circle of unshakable English-speaking allies, the United States possesses near-total control of the world’s seas, skies, airwaves and cyberspace, while American universities, think tanks and journals dominate the world of ideas. Put aside all the alarmist pundity. American hegemony is now as firm as or firmer than it has ever been, and will remain so for a long time to come.

Non-Unique: China can’t, and doesn’t want to, run Asia

Dingding Chen, January 14, 2015, Relax, China Won’t Challenge US Hegemony, The Diplomat, Dingding Chen is an assistant professor of Government and Public Administration at the University of Macau, Non-Resident Fellow at the Global Public Policy Institute (GPPi) Berlin, Germany. He is also the founding Director of 海国图智研究院 (Intellisia Institute), a newly established independent think tank focusing on international affairs in China. His research interests include: Chinese foreign policy, Asian security, Chinese politics, and human rights, thediplomat.com/2015/01/relax-china-wont-challenge-us-hegemony/

First let us look at China’s capabilities, which need to be especially formidable if China wants to challenge the United States. Although China’s comprehensive capabilities have been growing rapidly for the past three decades, almost all analysts inside and outside of China agree that there is still a huge gap between China and the U.S. in terms of comprehensive capabilities, particularly when the U.S. is far ahead of China in military and technological realms. China’s economy might have already passed the U.S. economy as the largest one in 2014, but the quality of China’s economy still remains a major weakness for Beijing. Thus, it would be a serious mistake for China to challenge the U.S. directly given the wide gap of capabilities between the two. Even if one day China’s comprehensive capabilities catch up with the United States, it would still be a huge mistake for China to challenge the U.S. because by then the two economies would be much more closely interconnected, creating a situation of mutual dependence benefiting both countries. Besides limited capabilities, China also has limited ambitions which have not been properly understood by many U.S. analysts. It is true that China’s grand strategy is to realize the “China dream” — a dream that will bring wealth, glory, and power to China again — but this, by no means, suggests that China wants to become a hegemon in Asia, or to create a Sino-centric tributary system around which all smaller states must obey China’s orders. Perhaps these perceptions exist in the United States because many U.S. analysts have unconsciously let ultra-realist thinking slip into their minds, thereby believing that states are constantly engaged in the ruthless pursuit of power and influence. But the structure of international politics has fundamentally changed since the end of the Cold War, thus rendering any serious possibility of world hegemony ineffective or even impossible. In essence, the costs of hegemony outweigh the benefits of hegemony in this new era of international politics, thanks to rising nationalism, nuclear weapons, and increasing economic interdependence between major powers. The Chinese leaders understand this new and changed structure of international politics and based on their assessments, they have decided not to seek hegemony, which is a losing business in this new era.

Turn: Attempting to maintain US hegemony leads to instability

Christopher Layne, 2012 (International Studies Quarterly 56, "This Time It’s Real: The End of Unipolarity and the Pax Americana")

Revealingly, Ikenberry makes clear this expectation when he says that the deal the United States should propose to China is for Washington “to accommodate a rising China by offering it status and position within the regional order in return for Beijing’s acceptance and accommodation of Washington’s core interests, which include remaining a dominant security provider within East Asia” (Ikenberry 2011:356). It is easy to see why the United States would want to cut such a deal but it is hard to see what’s in it for China. American hegemony is waning and China is ascending, and there is zero reason for China to accept this bargain because it aims to be the hegemon in its own region. The unfolding Sino-American rivalry in East Asia can be seen as an example of Dodge City syndrome (in American Western movies, one gunslinger says to the other: “This town ain’t big enough for both of us”) or as a geopolitical example of Newtonian physics (two hegemons cannot occupy the same region at the same time). From either perspective, the dangers should be obvious: unless the United States is willing to accept China’s ascendancy in East (and Southeast) Asia, Washington and Beijing are on a collision course.

“It’s not just on our maps. It’s in our minds: China is the center of all the action here,” explained a Singaporean journalist, pointing to the growing Chinese staff in his office. China sits at the core of the most populous and economically dynamic pan-region in the world, encompassing Russia’s Far East, Japan, the Korean peninsula, India, Southeast Asia, and the Pacific islands, including Australia and New Zealand. No nation within the India-Japan-Australia triangle - whether of the first, second, or third world - can withstand China’s economic, demographic, political, and cultural encroachment. Some Americans believe it is their own preponderance that guarantees Asian stability, but the half of the world population that resides in Asia increasingly sees its stability as occurring under Chinese hegemony. “America can come and go, but our fate ultimately hinges on China’s decisions and behavior,” remarked a Thai diplomat during a conference at a five-star Bangkok hotel.

No miscalculation escalation in Asia – precedent for restraint

Steven Stashwick, September 25, 2015, South China Sea: Conflict Escalation and ‘Miscalculation’ Myths, The Diplomat, Steven Stashwick has a graduate studies in international relations at the University of Chicago, and is a Lieutenant Commander in the U.S. Navy Reserve, http://thediplomat.com/2015/09/south-china-sea-conflict-escalation-and-miscalculation-myths/

In Asia, there is recent and dramatic precedent for restraint, even after an unambiguously hostile local event, which belies theoretical arguments about the risk of miscalculation and unintended escalation. **When the South Korean warship Cheonan was sunk** in 2010, South Korea determined that North Korea was responsible. Far from a mere ‘incident’ of the sort worried over in the South China Sea, this was a belligerent act against South Korea’s armed forces. And yet, there was no miscalculation-fueled conflict spiral, and instead a strategically calibrated response. It remains unknown whether the sinking of the Cheonan was ordered by the North Koreans (they continue to deny any responsibility), the act of a renegade, or, perhaps least plausibly, an accident. What is clear is that despite a sunken ship and 46 sailors killed, the incident did not spiral out of control. This suggests that South Korea’s political calculus did not view militarily punishing North Korea worth the risk of a renewed – and potentially nuclear – war, which is to say that an extraordinary but tactical-level event did not trump strategic preferences. **Even so, some take the miscalculation-escalation dynamic so far as to suggest that incidents between fishing vessels and coast guards in the South China Sea might lead to war. In view of the Cold War record and the recent Cheonan example, such propositions are drastically overstated.** It is conceivable that a state already resolved to escalate a dispute militarily might view a local maritime incident as a convenient casus belli. But in that emphatically calculated case, no institutional impediments to such incidents would prevent the hostility. On the contrary, the prevalence of coast guards and fishing vessels is actually a sign of restraint. For a front so often considered a “flashpoint,” it is notable how few incidents in the South China Sea are between naval assets. This is not accident or luck, but instead suggests that regional players deliberately use lightly armed coast guard and other para-military “white hull” vessels to enforce their claims. Because these units do not have the ability to escalate force the way warships do, it in fact signals their desire to avoid escalation. And while “gray hull” naval vessels may be just over the horizon providing an implicit threat of force, they can also **provide a further constraint on potential incidents; their very presence compels parties to consider how far to escalate without inviting more serious responses.**

Impact Turn: Worst case predictions cause failed policy making, trade off with better solutions, and risk escalation – we need to prioritize probability

At a security conference recently, the moderator asked the panel of distinguished cybersecurity leaders what their nightmare scenario was. The answers were the predictable array of large-scale attacks: against our communications infrastructure, against the power grid, against the financial system, in combination with a physical attack. I didn’t get to give my answer until the afternoon, which was: “My nightmare scenario is that people keep talking about their nightmare scenarios.” There’s a certain blindness that comes from worst-case thinking. An extension of the precautionary principle, it involves imagining the worst possible outcome and then acting as if it were a certainty. It substitutes imagination for thinking, speculation for risk analysis, and fear for reason. It fosters powerlessness and vulnerability and magnifies social paralysis. And it makes us more vulnerable to the effects of terrorism. Worst-case thinking means generally bad decision making for several reasons. First, it’s only half of the cost-benefit equation. Every decision has costs and benefits, risks and rewards. By speculating about what can possibly go wrong, and then acting as if that is likely to happen, worst-case thinking focuses only on the extreme but improbable risks and does a poor job at assessing outcomes. Second, it’s based on flawed logic. It begs the question by assuming that a proponent of an action must prove that the nightmare scenario is impossible. Third, it can be used to support any position or its opposite. If we build a nuclear power plant, it could melt down. If we don’t build it, we will run short of power and society will collapse into anarchy. If we allow flights near Iceland’s volcanic ash, planes will crash and people will die. If we don’t, organs won’t arrive in time for transplant operations and people will die. If we don’t invade Iraq, Saddam Hussein might use the nuclear weapons he might have. If we do, we might destabilize the Middle East, leading to widespread violence and death. Of course, not all fears are equal. Those that we tend to exaggerate are more easily justified by worst-case thinking. So terrorism fears trump privacy fears, and almost everything else; technology is hard to understand and therefore scary; nuclear weapons are worse than conventional weapons; our children need to be protected at all costs; and annihilating the planet is bad. Basically, any fear that would make a good movie plot is amenable to worst-case thinking. Fourth and finally, worst-case thinking validates ignorance. Instead of focusing on what we know, it focuses on what we don’t know -- and what we can imagine. Remember Defense Secretary Rumsfeld’s quote? “Reports that say that something hasn’t happened are always interesting to me, because as we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns -- the ones we don’t know we don’t know.” And this: “the absence of evidence is not evidence of absence.” Ignorance isn’t a cause for doubt; when you can fill that ignorance with imagination, it can be a call to action. Even worse, it can lead to hasty and dangerous acts. You can’t wait for a smoking gun, so you act as if the gun is about to go off. Rather than making us safer, worst-case thinking has the potential to cause dangerous escalation. The new undercurrent in this is that our society no longer has the ability to calculate probabilities. Risk assessment is devalued. Probabilistic thinking is repudiated in favor of “possibilistic thinking”: Since we can’t know what’s likely to go wrong, let’s speculate about what can possibly go wrong. Worst-case thinking leads to bad decisions, bad systems design, and bad security. And we all have direct experience with its effects: airline security and the TSA, which we make fun of when we’re not appalled that they’re harassing 93-year-old women or keeping first graders off airplanes. You can’t be too careful! Actually, you can. You can refuse to fly because of the possibility of plane crashes. You can lock your children in the house because of the possibility of child predators. You can eschew all contact with people because of the possibility of hurt. Steven Hawking wants to avoid trying to communicate with aliens because they might be hostile; does he want to turn off all the planet’s television broadcasts because they’re radiating into space? It isn’t hard to parody worst-case thinking, and at its extreme it’s a psychological condition. Frank Furedi, a sociology professor at the University of Kent, writes: “Worst-case thinking encourages society to adopt fear as one of the dominant principles around which the public, the government and institutions should organize their life. It institutionalizes insecurity and fosters a mood of confusion and powerlessness. Through popularizing the belief that worst cases are normal, it incites people to
feel defenseless and vulnerable to a wide range of future threats." Even worse, it plays directly into the hands of terrorists, creating a population that is easily terrorized -- even by failed terrorist attacks like the Christmas Day underwear bomber and the Times Square SUV bomber. When someone is proposing a change, the onus should be on them to justify it over the status quo. But worst-case thinking is a way of looking at the world that exaggerates the rare and unusual and gives the rare much more credence than it deserves. It isn't really a principle; it's a cheap trick to justify what you already believe. It lets lazy or biased people make what seem to be cogent arguments without understanding the whole issue. And when people don't need to refute counterarguments, there's no point in listening to them.

Turn: US military action in South China Sea leads to Chinese backlash

A FONOP also is likely to spark a Chinese backlash, hindering a peaceful resolution of SCS disputes. As MIT’s Taylor Fravel observed, a FONOP “gives China an opportunity to assert that the United States is the country ‘militarizing’ the South China Sea,” providing Beijing with an excuse to respond in kind. It would be better to instead test Chinese pledges of goodwill. Xi Jinping’s recent promise not to militarize the artificial islands may be insincere, but conducting a FONOP will create pressure for Xi to respond aggressively, even if his commitment to eschew militarization was genuine. Likewise, China would appear aggressive, dangerous, and duplicitous if it continued to take provocative actions after promising to not militarize, making an American response appear reasonable. Additionally, a FONOP plays into Chinese nationalist rhetoric that paints American actions as hypocritical and one-sided. What about America’s allies and friends? Reassuring Washington’s partners appears to be the true objective of the upcoming FONOP. To make up for their limited military capabilities, other claimants such as Vietnam and the Philippines have turned to the United States. Secretary of Defense Ash Carter has repeatedly proclaimed that American participation in the SCS dispute is intended to reassure allies that Washington will not leave them flapping in the wind. For instance, at the Shangri La Dialogue, Carter declared, “There should be no mistake: the United States will fly, sail, and operate wherever international law allows.” A FONOP in the SCS would back his rhetoric. However, if China uses the U.S. action as a rationale for maintaining or increasing the rate of island reclamation then friendly states likely would feel even more threatened. This would counteract the FONOP’s original purpose and would likely push the United States and China into a dangerous spiral, requiring more shows of force to reassure allies against an assertive China acting aggressively in response to American shows of force. Chinese behavior in the SCS is a legitimate concern for the United States, but Washington should realize that this dispute is unlikely to be resolved with military power. Indeed, problems will only grow if both Washington and Beijing keep poking each other in the eye. Maintaining peace in the SCS instead requires the United States and China to work together to resolve precisely these kinds of contentious issues.

Turn: South China Sea engagement leads to US hegemony decline and Chinese hegemony increase

Philip Reynolds June 01, 2016, Is China Winning in the South China Sea?, The Diplomat, Phil Reynolds is a Ph.D. candidate at the University of Hawaii, thediplomat.com/2016/06/is-china-winning-in-the-south-china-sea/

China is using the South China Sea islands as the means of making the 21st century for itself what the 20th century was to the United States. Chinese policies, coldly rational, are meant to illicit a military response from the United States. As the dominant power, Washington has little incentive to give the challenger a stage on which it can engage the United States as a peer. On the other hand, China has everything to gain from a successful challenge. This leads to an interesting hypothesis: The islands themselves are really not the objective of Chinese expansion. Rather, the goal of China’s grand strategy may be to successfully challenge the United States in the eyes of the world. If China is correct, any actual conflict with the United States will not end in an all-out war. Intense pressure from the international community will quickly lead to a negotiated settlement. This is a win for China, one that it is preparing for in its new Defense White Paper, just released in mid-2015. China has been preparing its maritime forces for “offshore waters defense” and to “protect is maritime rights and interests.” China’s ability to deny the United States entry into contested areas is meant to last just long enough for negotiations to begin. Faced with the loss of ships and sailors, it will be difficult to convince the American public that Chinese hegemony in the western Pacific is an existential threat, especially after the debacle in Iraq. History and China have maneuvered the United States into a bleak position with four alternatives, all of which benefit China: The United States can continue with low-grade military confrontations that do little to stop Chinese expansion; the United States can go to war and quickly find itself with heavy losses and a negotiated settlement; it can retreat, leaving its recent partner nations to develop their own status quo with China; or it can move away from the “pivot to Asia” toward a more realpolitik approach vis-a-vis China. A fifth outcome, worst of all, is that newly emboldened partners push back against the Chinese, triggering a shooting war and drawing in the United States. All five outcomes make China look stronger and closer to making the 21st century a Chinese century.

Non-Unique: China’s South China Sea claims are correct and long standing – the problem is with International law’s ambiguity not China

Zheng Zhihua June 12, 2015, WHY DOES CHINA’S MARITIME CLAIM REMAIN AMBIGUOUS?, Asia Maritime Transparency Initiative, Dr. Zheng Zhihua is director of Joint Institute for Maritime Law and History at East China University of Political Science and Law (ECUPL). He is also deputy general secretary of Shanghai Law and Society Association. Dr. Zheng works in the fields of oceans law and policy. He is also a research fellow of Law and Society Center, KoGuan Law School of Shanghai Jiao Tong University, amti.csis.org/why-does-chinas-maritime-claim-remain-ambiguous/

China has an unequivocal and consistent territorial claim on the islands and other land features in the South China Sea. As a matter of fact, it has unequivocally stated its claim in three official documents: the 1947 Location Map of the South China Sea Islands released by the Kuomintang government in Nanjing, the 1958 Declaration of the Government of New China on the Territorial Sea, and the 1992 Law on Territorial Sea and Contiguous Zone. These documents state that the Dongsha (Pratas) Islands, Xisha (Paracel) Islands, Zhongsha (Macclesfield Bank/Scarborough Shoal) Islands, Nansha (Spratly) Islands and other islands are part of the sovereign territory of China. Some countries view China’s maritime claim in the South China Sea as ambiguous for historical reasons. The first reason is that the UNCLOS does not properly address the issue of historic rights. Despite the reference to historic title in Articles 15 and 298(1)(a), the provision on historic bays in Article 15(6), and the recognition of traditional fishing rights in Article 51, it does not have any provision for the definition of historic rights or their specific connotation and denotation. The second is that no consistent understanding has been reached in international law on historic rights. For example, Yehuda Z. Blum, an Israeli professor of law and diplomat, has observed: The term “historic rights” denotes the possession by a state, over certain land or maritime areas, of rights that would not normally accrue to it under the general rules of international law, such rights having been acquired by that state through a process of historical consolidation ... Historic rights are a product of a lengthy process comprising a long series of acts, omissions and patterns of behavior which, in their entirety, and through their cumulative effect, bring such rights into being and consolidate them into rights valid in international law.” A state acquires historic rights through effective exercise of these rights by one or more states, a practice followed by relevant states. The concept of historic rights is almost equivalent to that of historic water. In this vein, Leo Bouchez, a renowned international law professor, says the concept of “historic rights” has evolved from the concept of “historic water” and “historic bays”. The development from “historic bays” to “historic water” and from “historic title” to “historic rights” indicates the evolution of legal concepts with the development of state practice, and that such concepts have not been finalized. From the point of view of China, one of the world’s oldest civilizations, the South China Sea is part of the traditional Asian order and, hence, it would be inappropriate to comprehend the Nine-Dash Line by relying solely on the Westphalian nation-state system. As Keyuan Zou, Harris professor of International Law at the University of Central has observed, the South China Sea Nine-Dash Line map was officially released by the Chinese Kuomintang government half a century before the UNCLOS, and one decade before the 1958 Four Geneva Conventions on the Law of the Sea. Thus, China’s historic rights within the Nine-Dash Line cannot be ignored. The Nine-Dash Line drawn by the Chinese government in 1947, at approximately the median position between China’s South China Sea islands and reefs and the coastlines of bordering states, reflects the scope of China’s claims. The consistency of the claims has been maintained by China after 1949, and the claims have been recognized or acquiesced to by bordering states over a long period of time. Therefore, the Nine-Dash Line has probative force and weight under international law. The so-called ambiguity in China’s Nine-Dash Line map and its claim on the waters within that line mainly stems from the imperfection of the UNCLOS. To some extent, international law on historic rights is defective in theory and doctrine and lacks a unified standard. China has been striving to clarify its claim in the South China Sea. But the joint efforts of the international community are also needed to complement and improve the UNCLOS by agreeing to a new international convention or protocol in order to clarify the understanding of historic rights.
Non-Unique: Chinese island building in the South China Sea is legal

GARY LEUPP, NOVEMBER 4, 2015, Fishing in Troubled Waters: the U.S. “Pushback” Against China’s Claims in the South China Sea, Gary Leupp is Professor of History at Tufts University, and holds a secondary appointment in the Department of Religion,

But there is in fact nothing illegal about building up maritime possessions you claim as your own. Another nation may challenge you, as when PRC warships clashed with Vietnamese transport ships in the Spratlys in 1988. (Right was established by might; 70 Vietnamese died and some reefs changed hands.) But if you can acquire control over reefs you can surround them with as much concrete as you want.

Turn: International law is used as a cover for US imperialism

Introduction By now we are familiar with imperial states using their military power to attack, destroy and occupy independent countries. Boatloads of important studies have documented how imperial countries have seized and pillaged the resources of mineral-rich and agriculturally productive countries, in consort with multi-national corporations. Financial critics have provided abundant data on the ways in which imperial creditors have extracted onerous rents, royalties and debt payments from indebted countries and their taxpayers, workers, employees and productive sectors. What has not been examined fully is the over-arching legal architecture which informs, justifies and facilitates imperial wars, pillage and debt collection. The Centrality of Imperial Law While force and violence, especially through overt and covert military intervention, have always been an essential part of empire-building, it does not operate in a legal vacuum: Judicial institutions, rulings and legal precedents precede, accompany and follow the process of empire building. The legality of imperial activity is based largely on the imperial state’s judicial system and its own legal experts. Their legal theories and opinions are always presented as over-ruling international law as well as the laws of the countries targeted for imperial intervention. Imperial law supersedes international law simply because imperial law is backed by brute force; it possesses imperial/colonial air, ground and naval armed forces to ensure the supremacy of imperial law. In contrast, international law lacks an effective enforcement mechanism. Moreover, international law, to the extent that it is effective, is applied only to the weaker powers and to regimes designated by the imperial powers as ‘violators’. The very judicial processes, including the appointment of judges and prosecutors who interpret international law, investigate international crime and arrest, sentence and punish ‘guilty’ parties are under to the influence of the reigning imperial powers. In other words, the application and jurisdiction of international law is selective and subject to constraints imposed by the configurations of imperial and national power. International law, at best, can provide a ‘moral’ judgment, a not insignificant basis for strengthening the political claims of countries, regimes and people seeking redress from imperial war crimes and economic pillage. To counter the claims and judgments pertaining to international law, especially in the area of the Geneva protocols such as war crimes and crimes against humanity, imperial legal experts, scholars and judges have elaborated a legal framework to justify or exempt imperial-state activity. The Uses of Imperial Law Empire-building throughout history is the result of conquest—the use or threat of superior military force. The US global empire is no exception. Where compliant rulers ‘invite’ or ‘submit’ to imperial domination, such acts of treason on the part of ‘puppet’ or ‘client’ rulers usually precipitate popular rebellions, which are then suppressed by joint imperial and collaborator armies. They cite imperial legal doctrine to justify their intervention to repress a subject people in revolt. While empires arise through the direct or indirect use of unbridled force, the maintenance and consolidation of empires requires a legal framework. Legal doctrines precede, accompany and follow the expansion and consolidation of empire for several reasons. Legality is really an extension of imperial conquest by other means. A state of constant warfare raises the cost of imperial maintenance. Force, especially in imperial democracies undermines the sense of civic virtue, which the rulers and citizens claim to uphold. Maintaining ‘law and order’ in the conquered nations requires a legal system and doctrine to uphold imperial rule, giving the facade of legitimacy to the outside world, attracting collaborator classes and individuals and providing the basis for the recruitment of local military, judicial and police officials. Imperial legal pronouncements, whether issued directly by executive, judicial, military or administrative bodies, are deemed the ‘supreme law of the universe’, superior to international law and protocols fashioned by non-imperial authorities and legal experts. This does not imply that imperial rulers totally discard international law; they just apply it selectively to their adversaries, especially against independent nations and rulers, in order to justify imperial intervention and aggression—Hence the ‘legal bases’ for dismantling Yugoslavia or invading Iraq and assassinating its rulers. Legal rulings are issued by the imperial judiciary to force states to comply with the economic demands of multi-national corporations, banks, creditors and speculators, even after the local or national courts have ruled such claims unlawful.

Turn: US international policy cloaked in mindset of superiority – leads to violence and destruction

This belief in America's unparalleled greatness has immense impact. It is not hyperbole to say that the sentiment expressed by Cooke is the overarching belief system of the US political and media class, the primary premise shaping political discourse. Politicians of all types routinely recite the same claim, and Cooke's tweet was quickly re-tweeted by a variety of commentators and self-proclaimed foreign policy experts from across the spectrum. Note that Cooke did not merely declare America's superiority, but rather used it to affirm a principle: as a result of its objective superiority, the US has the right to do things that other nations do not. This self-affirming belief - I can do X because I'm Good and you are barred from X because you are Bad - is the universally invoked justification for all aggression. It's the crux of hypocrisy.

And most significantly of all, it is the violent enemy of law: the idea that everyone is bound by the same set of rules and restraints. This eagerness to declare oneself exempt from the rules to which others are bound, on the grounds of one's own objective superiority, is always the animating sentiment behind nationalistic criminality. Here's what Orwell said about that in Notes on Nationalism: "All nationalists have the power of not seeing resemblances between similar sets of facts. A British Tory will defend self-determination in Europe and oppose it in India with no feeling of inconsistency. Actions are held to be good or bad, not on their own merits, but according to who does them, and there is almost no kind of outrage — torture, the use of hostages, forced labour, mass deportations, imprisonment without trial, forgery, assassination, the bombing of civilians — which does not change its moral colour when it is committed by 'our' side . . . The nationalist not only does not disapprove of atrocities committed by his own side, but he has a remarkable capacity for not even hearing about them." Preserving this warped morality, this nationalistic prerogative, is, far and away, the primary objective of America's foreign policy community, composed of its political offices, media outlets, and (especially) think tanks. What Cooke expressed here - that the US, due to its objective superiority, is not bound by the same rules as others - is the most cherished and aggressively guarded principle in that circle. Conversely, the notion that the US should be bound by the same rules as everyone else is the most scorned and marginalized. Last week, the Princeton professor Cornel West denounced Presidents Nixon, Bush and Obama as "war criminals", saying that "they have killed innocent people in the name of the struggle for freedom, but they're suspending the law, very much like Wall Street criminals".

West specifically cited Obama's covert drone wars and killing of innocent people, including children. What West was doing there was rather straightforward: applying the same legal and moral rules to US aggression that he has applied to other countries and which the US applies to non-friendly, disobedient regimes. In other words, West did exactly that which is most scorned and taboo in DC policy circles.

Positive peace is an uncritical, empty moral framework – looking at actual scenarios is more important

Peter Lawler, March 2002, Peace Review; Mar2002, Vol. 14 Issue 1, p7, Peter Lawler is Senior lecturer in international relations, University of Manchester https://www.academia.edu/6093860/Peace_Research_War_and_the_Problem_of_Focus?auto=download

My principal concern at the time was with the growing preoccupation of much of peace research (or peace studies) with the issue of “structural violence” and the pursuit of such goals as justice, human fulfilment, or a more just world order—in short, the realization of positive peace. As laudable and important as such objectives clearly are, I was unconvinced at the time that peace research brought anything distinctive to them. Such concerns now lay at the heart of a wide range of social scientific disciplines. Furthermore, the rapid expansion of post-positivist theorizing across the social sciences, perhaps most importantly in the fields of international relations and security studies, had eroded the normative distinctiveness of peace research to a significant extent. I went on to suggest that peace research might reacquire focus by self-consciously serving as a conduit between theoretical and conceptual developments across the social sciences and the continuing problem of direct violence within and between states. By this I did not mean that peace research should simply reduce itself to conflict analysis or return to the quasi-scientism of its foundational years. Rather, I envisaged a normatively informed peace research engaging critically with orthodox discourses (in the Foucauldian sense) of security and strategy. In more practical terms, I envisaged peace research as a site for cutting-edge research into the resolution of the various extremely violent conflicts that have marked the post-Cold-War era. Although such an engagement clearly requires consideration of the structural impetuses to the outbreak of violence, I did not see the analysis of the origins and development of such things as exploitation and poverty as the appropriate primary focus of peace research. Why? Because I felt this contributed to the dissipation of peace research’s impact. This would continue the problem of peace research being perceived as the conceptually impoverished cousin of various other disciplines, such as political economy, sociology and so on, where research into such issues is vastly more diverse and developed. My book hardly sold off the shelves in vast numbers, nor did my observations cause much of a ripple in peace research circles. Galtung’s own response was confined to a couple of dismissive sentences in the introduction to one of his recent books. Most reactions to my argument arose in the context of presentations by myself at conferences, seminars and such. Of those who did comment, in writing or to me personally, a minority supported my sentiments but the majority took the view that I was arguing for peace research effectively to shift back to a focus on negative peace and this could hardly be a forward step. Some accused me of being conservative, reactionary even. I now teach and research primarily in the field of international relations and here, by contrast, the perception that I am a critic of peace research, and Galtung in particular, has generally met with either approval or acute disinterest. This is in spite of the fact that many, although by no means all, of my disciplinary colleagues apparently share the normative sentiments of many peace researchers. In other words, for many international relations scholars, peace research continues to have an image problem. True, the crassest form of an international relations critique of peace research still falls back on the tired dualism of realism versus idealism, with peace research firmly and pejoratively located within the latter. A more serious critique, however, revolves around three common perceptions of peace research: the absence of a substantial theoretical or conceptual core, a tendency to deploy uncritically key terms such as “structural violence” or “positive peace,” and an unclear standpoint with regard to direct violence, particularly the use of violence in the pursuit of justice or other values. These themes, threaded through my own analysis of Galtungian peace research, led me to the conclusion that, in spite of an overt value orientation, peace research could not provide an adequate account of its own normative nature.

Turn: FONOPS hurt International law and expose US hypocrisy

Xinhua, January 31, 2016, Commentary: The international-law irony of U.S. provocations in South China Sea, Xinhua News Service, Xinhua is one of the major international and Chinese news providers, news.xinhuanet.com/english/2016-01/31/c_135061532.htm

Washington has long claimed that the so-called freedom of navigation operations by the U.S. military aims to safeguard public access to waters and airspace as allowed by the international law. However, citing seemingly lofty motives will not obscure the fact that the U.S. maneuvers in South China Sea threaten China's sovereignty and security interests, endanger regional peace and stability and constitute a grave violation of the international law. As ironic as it is, Washington has always defended its arbitrary move by referring to international law, but it has so far not approved the United Nations Convention on the Law of the Sea, which establishes legal order and regulations on international waters. The calculation behind such a move is crystal clear: The United States is unwilling to be bound by an international treaty, which it claims as severely flawed, because the sole superpower has already controlled such maritime resources as oil and gas deposits through military power. Another irony is that Uncle Sam asserts that it maintains freedom of navigation in the South China Sea on the legal basis of international law, but it applies standards unilaterally defined by itself. In a document issued in 2015 regarding the so-called freedom of navigation program, the U.S. government said the foremost target of the U.S. action is "excessive maritime claims that are defined by the U.S. side." The document reveals that Washington substitutes its own standard for international law and attempts to unilaterally impose its own idea upon other countries. Moreover, the U.S. action itself to maintain so-called freedom of navigation under international law is a threat to the principles of international law.

Turn: FONOPS hurt International law – 3 reasons

The truth is, however, these two accusations are both unfounded and inconsistent with the long-standing U.S. policy on the South China Sea issue. On the one hand, the U.S. declares that it holds no position on the sovereignty issue in the South China Sea, but on the other, it openly challenges China’s sovereignty claims in the area. The mismatch of its words and deeds is a violation of the principle of estoppel in international law. The U.S. accuses China of endangering freedom of navigation in the South China Sea, but instead of providing evidence to prove its point, it only keeps clamoring that China’s island and reef construction in Nansha is “too quick, too much.” The Lassen’s operations in Nansha constitute a grave violation of many principles of international law and norms that the United States has supported over the years, mainly in the following three aspects. First, the U.S. act was an abuse of the rules on freedom of navigation. The U.S. intrusion within 12 nautical miles of China’s Nansha Islands was a typical act of “hazardous passage.” To avoid escalation of conflicts, China has remained restrained on the South China Sea disputes, refraining from publishing the base points and baselines of territorial sea of the Nansha Islands. But China is entitled to its territorial sovereignty and maritime rights and interests, whether the base points and baselines are published or not. Even if we endorse the U.S. claim that Zhuhai Reef, as a low-tide elevation, does not enjoy the right of 12-nautical-mile territorial limits, Zhongye [Thitu] Island near Zhuhai obviously does, and that island is also part of China’s territory. The United States repeatedly drew an analogy between the U.S. intrusion in the waters close to the Nansha Islands and a Chinese naval vessel’s passage within 12 nautical miles of the Aleutian Islands in September, claiming that its activity was “innocent passage.” The fact is, under international law, the Tanaga Pass of the Aleutian Islands is open to international navigation, so “transit passage” rather than “innocent passage” applied to the Chinese warship. The 12 nautical miles of the Nansha Islands, on the other hand, are not part of international pathways. Why did the U.S. vessel choose to take this detour when the international waterway was wide enough for its passage? The U.S. act was obviously an abuse of the rules on freedom of navigation under international law. Second, the U.S. show of force was a breach of its international obligations concerning no use or threat of force. Due to the complicated hydrological regime around the Nansha Islands and diversity of the naval strengths of different countries, China has all along been tolerant to vessels that mistakenly entered waters close to the Nansha Islands. The United States itself also recognizes that it once entered within 12 nautical miles of the Nansha Islands before 2012. But this time, the United States identified a 12-nautical-mile line before declaring its challenge. Its action was intended to negate China’s territorial sovereignty and maritime rights and interests over the islands and reefs in the area, and no doubt posed a blatant military threat to China. It is natural that China and the United States have disputes when it comes to the rules of maritime navigation, but the differences should be resolved through negotiations and consultations. This is the normal international practice for dispute settlement. The U.S. use of force apparently ran counter to the principle of resolving international disputes by peaceful means and its obligations under international treaties, and constituted a gross infringement of the purposes and principles of the United Nations Charter and other international rules and norms. Third, the U.S. act violated China’s territorial sovereignty and eroded the basic principles of international law. Sovereign states are main players in today’s international system, and respect for sovereignty is the basic principle of international law. Previously, the United States had repeatedly emphasized that it held no position on the sovereignty of the Nansha Islands and reefs. But this time, by conducting the so-called freedom-of-navigation operations, the United States intended to negate China’s sovereignty and maritime interests over its long-garrisoned islands and reefs where extension projects were carried out recently. This was a direct provocation against China’s sovereignty. If countries were allowed to willfully challenge the sovereignty claims of other countries, wouldn’t the entire international system be pushed to the verge of collapse? The U.S. act was not only a violation of the principle of estoppel in international law, but also a grave challenge to the sovereignty principle of the international system. In a nutshell, the United States was actually engaged in hegemony and power politics, a prevailing pursuit in the world in the 19th century, under the cloak of the 21st century endeavor of safeguarding freedom of navigation and international justice. This
is sheer hypocrisy. The United States might as well make clear its real intention to the world that it does
not want to see any increase of Chinese power in the South China Sea.

Andrew Jones, October 13, 2013, NASA chief says ban on China space cooperation is ‘temporary’, Journalist following China’s space program, international relations, and more, gbtimes.com/china/nasa-chief-says-ban-china-space-cooperation-temporary

NASA administrator Charles Bolden has said the United States should work with China on human spaceflight projects or find itself frozen out of future international space exploration. NASA has been effectively banned by Congress from any bilateral cooperation with China since 2011, and China has not been allowed to join the 15-nation collaborative International Space Station project. However Mr Bolden, speaking on a panel of heads of space agencies at the 2015 International Astronautical Congress in Jerusalem on Monday, believes this state of affairs is temporary. “The reason I think that where we are today is temporary is because of a practical statement that we will find ourselves on the outside looking in, because everybody...who has any hope of a human spaceflight program ... will go to whoever will fly their people,” Reuters reported Bolden as saying. China’s own representative, Xu Dazhe, the head of the body which oversees the country’s space activities, welcomed Bolden’s words, saying, “China has no difficulties in our cooperation policies with other agencies.”

**US-China dialoguing on space already**

As for future U.S.-China space relations, the first "U.S.-China Civil Space Cooperation Dialogue" is slated to take place in China before the end of October. Last June, the United States and China decided to establish regular bilateral, government-to-government consultations on civil space cooperation. That agreement came out of the seventh round of the U.S.-China Strategic and Economic Dialogue, held June 22-24 in Washington, D.C, with Secretary of State John Kerry taking active part in the discussions. The two sides held in-depth talks on major bilateral, regional and global issues. More than 70 important outcomes resulted from the dialogue, including a number of space items. Aside from putting in place a "Civil Space Cooperation Dialogue," the two sides also decided to have exchanges on other space matters, including satellite-collision avoidance, weather monitoring and climate research.

US spends way more than other countries in raw and per person calculations

Institutional budgets are critical in starting-up and developing capital-intensive and high technology sectors such as space. Government Budget Appropriations or Outlays for R&D (GBAORD) data are assembled by national authorities analysing their budget for R&D content and classifying them by “socio-economic objective”. These diverse objectives represent the intention of the government at the time of funding commitment, and a special category “exploration and exploitation of space” exists. Although the data provide only a partial picture of space investments (see note below), the long-term time-series provide useful trends on policy orientations. In 2013, total civil GBAORD for space programmes for all OECD countries amounted to USD 19.2 billion PPP. The United States had the highest GBAORD for space programmes at USD 10.6 billion PPP, followed by the Russian Federation (USD 3.3 billion PPP), Japan (USD 2.2 billion PPP) and France (USD 1.7 billion PPP). The United States was also the country in which space programmes took the highest percentage of total civil GBAORD, at 16.9%, followed by France (10.4%) and Belgium (8.7%). The OECD-wide mean average represented 7.7% in 2013.

No Internal Link: Diminishing returns – space tech investment isn’t efficient anymore

Amitai Etzioni, August 17, 2012 (Mars can wait. Oceans can’t, Amitai Etzioni is professor of international relations and director of the Institute for Communitarian Policy Studies at George Washington University, http://www.cnn.com/2012/04/09/opinion/etzioni-space-oceans/)

Actually, there are very good reasons to stop spending billions of dollars on manned space missions, to explore space in ways that are safer and much less costly, and to grant much higher priority to other scientific and engineering mega-projects, the oceans in particular. The main costs of space exploration arise from the fact that we are set on sending humans, rather than robots. The reasons such efforts drive up the costs include: A human needs a return ticket, while a robot can go one way. Space vehicles for humans must be made safe, while we can risk a bunch of robots without losing sleep. Robots are much easier to feed, experience little trouble when subject to prolonged weightlessness, and are much easier to shield from radiation. And they can do most tasks humans can. British astronaut royal Martin Rees writes, “I think that the practical case (for manned flights) gets weaker and weaker with every advance in robotics and miniaturization. It’s hard to see any particular reason or purpose in going back to the moon or indeed sending people into space at all.” Nobel Laureate Steven Weinberg calls manned missions “an incredible waste of money” and argues that “for the cost of putting a few people on a very limited set of locations on Mars we could have dozens of unmanned, robotic missions roving all over Mars.” The main argument for using humans is a public relations one. As Neil deGrasse Tyson puts it in Foreign Affairs, “China’s latest space proclamations could conceivably produce another ‘Sputnik moment’ for the United States, spurring the country into action after a relatively fallow period in its space efforts.” Also, astronauts are said to inspire our youth to become scientists and explorers. However, it is far from established that we cannot achieve the same effects by making other R&D projects our main priority. Take the oceans, about which we know much less than the dark side of the moon. Ninety percent of the ocean floor has not even been charted, and while we have been to the moon, the technology to explore the ocean’s floors is still being developed. For example, a permanent partially-submerged sea exploration station, called the SeaOrbiter, is currently in development. The oceans play a major role in controlling our climate. But we have not learned yet how to use them to cool us off rather than contribute to our overheating. Ocean organisms are said to hold the promise of cures for an array of diseases. An examination of the unique eyes of skate (ray fish) led to advances in combating blindness, the horseshoe crab was crucial in developing a test for bacterial contamination, and sea urchins helped in the development of test-tube fertilization. The toadfish’s ability to regenerate its central nervous system is of much interest to neuroscientists. A recent Japanese study concluded that the drug eribulin, which was derived from sea sponges, is effective in combating breast, colon, and urinary cancer. Given the looming crisis of water scarcity, we badly need more efficient and less costly methods to desalinate ocean water. By 2025, 1.8 billion people are expected to suffer from severe water scarcity, with that number jumping to 3.9 billion by 2050—well over a third of the entire global population. If the oceans do not make your heart go pitter-patter, how about engineering a bacteria that eats carbon dioxide - and thus helps protect the world from overheating -- AND excretes fuel which will allow us to drive our cars and machines, without oil? I cannot find any evidence that people young or old, Americans or citizens of other nations, would be less impressed or less inspired with such a breakthrough than with one more set of photos of a far away galaxy or a whole Milky Way full of stars. Space enthusiasts claim that space exploration has generated major spinoffs for our life right here on Earth. Tyson quotes President Obama suggesting that the Apollo mission “produced technologies that have improved kidney dialysis and water purification systems; sensors to test for hazardous gases; energy-saving building materials; and fire-resistant fabrics used by firefighters and soldiers,” and adds a few more innovations to the list: “digital imaging, implantable pacemakers, collision-avoidance systems on aircraft, precision LASIK eye surgery, and global positioning satellites.” Of course, the space environment is radically different from the one on Earth. Materials and technologies that are suited for a vacuum, zero gravity, and extreme cold and heat are not the ones we typically can use on Earth. Opinion: Gingrich’s moon colony lost in the laughter Elias Carayannis, professor of Science, Technology, Innovation and Entrepreneurship at The George Washington University, notes “government agencies” -- particularly those such as the National Space and Aeronautics Administration that are continually pressured to justify their activities -- tout the spin-off value of their investments in sometimes quite extravagant claims." Products such as Velcro, Tang, and Teflon that are often cited as spinoffs of space technology did not actually result from the space program. Space promoters tell us, once every few months, that there are signs that there might be or has been water on one of the planets that might make "life" possible. I wonder if some of those who hear these reports interpret them to mean that we expect to find a civilization out there, one that we could ally with, say
against the Chinese. What scientists are really talking about is organic material, the kind found in any compost -- not a reason to spend billions of dollars of public funds.

Turn: Economic growth is bad – increases poverty and income inequality and hurts the environment

Samuel Alexander, September 22, 2015, Sustained economic growth: United Nations mistakes the poison for the cure, The Conversation news aggregator, Samuel Alexander is a research fellow at the Melbourne Sustainable Society Institute, University of Melbourne, theconversation.com/sustained-economic-growth-united-nations-mistakes-the-poison-for-the-cure-47691

The defining flaw in the United Nations’ agenda is the naïve assumption that “sustained economic growth” is the most direct path to achieving the Sustainable Development Goals. This faith in the god of growth is fundamentally misplaced. It has been shown, for example, that for every $100 in global growth merely $0.60 is directed toward resolving global poverty. Not only is this an incredibly inefficient pathway to poverty alleviation, it is environmentally unsupportable. By championing economic growth, the Sustainable Development Goals are a barely disguised defence of the market fundamentalism that underpins business-as-usual. But in an age of planetary limits, sustained economic growth is not the solution to our social and environmental ills, but their cause.

Turn: Economic growth is harmful and bad – 3 reasons

Graeme Maxton, April 21, 2015, Economic growth doesn't create jobs, it destroys them, The Guardian, Graeme Maxton is secretary general of the Club of Rome (The Club of Rome is a global think tank that deals with a variety of international political issues), www.theguardian.com/sustainable-business/2015/apr/21/jobs-economic-growth-inequality-environment-club-of-rome

After so many years of being told the same thing, it is barely surprising that we believe it. Economic growth is good, we are told, and essential to all we do. Growth creates work. Work creates wealth. Wealth closes the gap between rich and poor. Once we have a stronger economy, the economists say, we can tackle our environmental problems. The only trouble is, this is all wrong. 1. Growth does not create jobs: The way the current economic system is designed, it does the opposite. The constant drive to increase productivity, which is what economic growth really is, requires manufacturers to steadily reduce input costs. Economic growth destroys jobs. Before the 1980s this didn't matter much, because many new manufacturing businesses were established to soak up a rising working population. Since then, though, this has not happened – growth has increased the number of people without jobs, certainly in the rich world. In the last 35 years, the world has experienced the fastest economic growth in human history. Yet, according to the Organisation for Economic Co-operation and Development (OECD), unemployment went up. Even extreme policy tools introduced since 2007, such as ultra-low interest rates and quantitative easing, have not achieved much. We were told that these would generate faster economic growth, yet growth has remained weak and unemployment is still higher than it was three decades ago. 2. Economic growth does not reduce inequality: Because the system is designed to reward those who already have money and assets, the free market economic model takes wealth from the poor and gives it to the rich. This is especially true since 2008 as government and consumer debts in the rich world have risen and average incomes have stagnated or fallen. The gap between the rich and poor is bigger today than in 1914. The gap between rich countries and poor ones is also much greater. The coming wave of new technology will make these problems worse. A study on the future of employment at Oxford University predicts that almost half of all jobs are at threat from robotisation in the next 20 years. Many of these are highly skilled jobs, such as those done by pilots, doctors, accountants and lawyers. The jobs that will be left are those that require a great deal of personal attention or artistic input – in other words, those that are generally poorly paid. 3. Boosting growth is not the way to solve environmental problems: Economic growth is the cause of them. It requires a constant increase in the flow of raw materials extracted from the planet to be turned into goods, services and waste. The more we grow, certainly using current economic thinking, the more resources we need to use and the more pollution we create. Rather then pursuing economic growth then, we should tackle our problems head on. We should develop policies to ensure that everyone has enough money to live on, because it leads to healthier and more stable societies. We should plan to reduce the gap between rich and poor, and we need to stop prevaricating when it comes to the environment and actually do something.

Utilitarians agree, growth is immoral

Avram Hiller, Ramona Ilea, Leonard Kahn, Dec 4, 2013, Consequentialism and Environmental Ethics, Routledge, Avram Hiller is an Associate Professor in the Philosophy Department at Portland State University, Ramona Ilea is professor at Pacific University in Oregon, Leonard Kahn is Assistant Professor of Philosophy at Loyola university in New Orleans, https://books.google.com/books?id=x1VKAgAAQBAJ&pg=PA174&lpg=PA174&dq="economic+growth"+"consequentialism"&source=bl&ots=a238LmgFvM&sig=2EGT1D2YZjUsecfWMHuWzo8x-QM&hl=en&sa=X&ved=0ahUKEwi86cmb8LLOAhUrzlMKVQZ2eDV8Q6AEIlzAC#v=onepage&q=mill's%20views%20on%20stationary%20growth&f
=false

Mill’s views on the stationary growth economy are linked with his ideas that we should focus our attention to improving the Art of Living and improving the quality of life rather than the quantity of consumer products: It is scarcely necessary to remark that a stationary state of capital and population implies no stationary state of human improvement. There would be as much scope as ever for all kinds of mental culture, and moral and social progress; as much room for improving the Art of Living, and much more likelihood of its being improved, when minds ceased to be engrossed by the art of getting on. (CW 3: 756) These claims and statements clearly resonate with the spirit of ecofeminists Maria Mies and Vandana Shiva’s (1993) promotion of a life of voluntary simplicity. Mies and Shiva promote an anti-oppression ideal that they conceive of as a life that liberates the consumer and unhook people from what they call the maldevelopment of Western industrialized and technological society. Maldevelopment is explained in terms of the existence of an inverse relationship between the good life and economic growth. In this view, carefully explained by Mics and Shiva and also widely held by environmentalist thinkers and activists, economic growth and quality of life and well-being are in conflict. The standard view that economic growth is needed for well-being is rejected as lacking contact with reality. According to Mics and Shiva, economic growth, increased production, and materialism act as barriers to rather than producers of well-being. On the contrary, they suggest that well-being depends upon reconceiving the good life and unhooking it from consumerism and materialism. We should replace this compulsive and addictive view with one that detaches the good from pursuit of and consumption of material objects. This goes along with a more just distribution of the economic and material basis of a good life, so that no one is deprived of the basic material goods needed for a decent standard of living that meets vital needs. This ideal removes the addictive and compulsive pursuit of materialism and replaces it with an ideal of moderate use of nature to provide for vital human needs. This notably resonates with the sentiments expressed by Mill in his attacks on the materialism of his day. Mill was prescient in his views, since few nineteenth-century thinkers foresaw that the resources of nature were limited and under threat by consumerism.

Turn: Cooperation only increases China’s advantage in space market – decreases cost to research, fuels technological advancement, and increases China’s market competitiveness

Ronald E. Turner, May 6, 2015, Should the United States Cooperate with China in Space?, Dr. Turner is an internationally recognized expert in radiation risk management for astronauts, particularly in response to solar storms. For the past eight years he served as Principal Investigator on NASA research grants investigating risk management strategies for solar particle events during human missions to the Moon or Mars. He is a Participating Scientist on the Mars Odyssey program, www.anser.org/babrief-us-china-space-coop

The reasons Rep. Wolf gave for imposing the restrictions on NASA, and the reasons Rep. Culberson gives for extending them, are straightforward and threefold: -China is militarily a threat to the United States: China’s military is growing more sophisticated and is increasing its reliance on space assets as a force multiplier. In addition, it is developing counterspace weapons to deny potential adversaries access to their military space assets. Shutting down the flow of space technology is intended to increase the cost and limit the capability of Chinese military space systems. -The United States has nothing to gain by cooperating with China: China’s civil space program is intended to be a source of pride for the Chinese people and evidence to the international community that China has emerged from its Third World, technologically stunted past. However, China is just now duplicating what other nations accomplished in the 1960s and 1970s. Limiting cooperation with China makes it difficult for the Chinese to innovate and make significant advances. Further, cooperation with China would be a one-way street: the Chinese would gain technology and stature, while the United States would give up its technical advantage and cede its leadership role. In addition, cooperation would increase China’s economic competitiveness to the detriment of the U.S. space industry.
Wolf amendment is slowing China’s space econ growth

An executive for U.S. company SpaceX, which has led a resurgence in U.S. commercial launch market share after U.S. organizations were priced out of the market until recently, stated in 2013 that the company views China as its main competition. However, in a July 2015 meeting with the Commission, the China Great Wall Industry Corporation asserted that it is unable to compete with Western counterparts due to U.S. export controls, indicating that obstacles remain despite China’s cost advantages. Second, China’s designation of the Beidou satellite navigation system—planned to provide global service by 2020—as “national infrastructure,” and introduction of preferential policies to promote its place in China’s domestic satellite navigation market, will directly impact the market share of GPS and related products within China. While GPS usage provides no revenues to the United States, Beidou is also intended to foster development in downstream industries such as mobile internet applications, which may affect U.S. firms’ market share in these industries.

Non-unique: US can work w China multilaterally through Russia or the EU

Logsdon said ESA, or even the Russian space agency, could serve as somewhat of a "middleman" to facilitate Chinese access to the International Space Station. "If China were to fly its Shenzhou spacecraft to the space station, it would dock to the Russian port ... and Putin's Russia has been making friendly noises towards China," Logsdon said. Dordain has been a strong advocate for incorporating China into mainstream spaceflight activities, Logsdon said. Dordain's term of office ends June 30. The incoming leader of ESA is Johann-Dietrich Wörner, who is currently chairman of the German Aerospace Center's executive board. "It is not clear either how much leverage Europe would have on this issue or whether Dordain's successor will share this view, but with U.S. backing, Europe could serve as an American surrogate," Logsdon said. Logsdon said it is worth remembering that the U.S. congressional prohibition regarding China is on bilateral U.S.-Chinese cooperation. "Starting the cooperation on the multilateral International Space Station may offer an escape route from current limitations," Logsdon said.

No Internal Link: Colonization trades off with sustainability – staying home is better

Liam Heneghan, September 23, 2013, Only Mars Will Save Us Now: Space Exploration and Terrestrial Sustainability as competing Environmental Strategies, 3 Quarks Daily, Liam Heneghan is Professor and Department Chair PhD Environmental Science and Studies at DePaul College in Chicago, www.3quarksdaily.com/3quarksdaily/2013/09/only-mars-will-save-us-now-space-exploration-and-terrestrial-sustainability-as-competing-environment.html

Traditional environmentalists (perhaps, most environmentalists) have asserted that our solutions need to be exactly of that type that Bostrom regards unlikely, in a probabilistic sense, for intelligent entities, that is “choosing to stay at home and living in harmony with nature.” Space advocates, however, do not, of course, have an appetite for curtailing the human enterprise in this manner. Though sustainability and space advocacy are, in a sense, forms of environmentalism — sharing apocalyptic visions and responding to similar planetary threats — one nevertheless expects a degree of tension between them. Robert Zubrin’s latest book Merchants of Despair: Radical Environmentalists, Criminal Pseudo-Scientists, and the Fatal Cult of Antihumanism (2012) seems to confirm the suspicion that sustainability and space exploration are indeed the opposite ends of the solution spectrum. In it Zubrin claims that radical environmentalists (inspired by the Rev Thomas Malthus 1766 – 1834) promote the idea that “humans are a cancer upon the Earth, a horde of vermin whose unconstrained aspirations and appetites are endangering the natural order.” Zubrin writes that a properly conceived environmentalism is “an effort to apply practical solutions to real environmental problems, for the purpose of making the world a better place for humans to thrive in.” The “anti-humanist” tendencies of radical environmentalism he claims attempts to suppress human activities “in order to protect a fixed ecological order with interests that stand above those of humanity.” A centerpiece of this anti-humanist thread is to be found in actions to abate global warming, which, according to Zubrin at least, has “significantly enhanced the abundance of nature, to the benefit of both agriculture and the wild biosphere alike.” Most ecologists do not share this assessment. I will not review the substance of Zubrin’s claims here — I think he paints with a rather broad brush and consequently smears outside the lines at times — but rather I use this to illustrate a claim that those advocating for the colonization of space often are examining the same terrestrial problems as environmentalists but come up with radically different solutions. The differences in approach are mediated, it seems to me, by different conceptions of the human being. Space enthusiasts, even when mindful of our capacity to wreak havoc are optimistic sorts. Traditionalist environmentalists, by reputation at least, incline to pessimism. As we reflect upon our environmental challenges, two poles therefore define our actions. On the one hand is the ascetic modesty of sustainability, on the other the hubristic desire to colonize the galaxy. In some ways Mars colonization may seem the more immediately attractive solution as it come with all the thrill of a technical challenge and the allure of subsequent conquest. This may be the reason why back in August at the Boulder meeting we all nodded in agreement with Zubrin. The adrenaline rush of sustainability may be a modest one in contrast. The challenge for sustainability advocates will be to convince us all that staying on Earth and tightening our planetary belt is the most exciting challenge of our times. In making this an attractive proposition environmentalists have a lot to learn from Mars enthusiasts.

Internal link turn: Working with China is bad – immoral and no gain

Cooperation between NASA and the Chinese space program is currently minimal. A provision inserted into the 2011 budget resolution by Rep. Frank Wolf (R-Virginia) bars the use of federal funds to conduct bilateral science exchanges with China. Wolf also spoke at yesterday’s hearing, reiterating his support for the ban and the reasoning behind it. It doesn’t make sense for the United States to assist China’s technological development, he said, given Beijing’s poor human rights record and its potential aspirations of global military supremacy. “I have been very troubled by this administration’s apparent eagerness to work with China on its space program and willingness to share other sensitive technologies,” Wolf said. “I want to be clear: The United States has no business cooperating with the People’s Liberation Army to help develop its space program.” If the United States wants to be on the right side of history, Wolf said, it will not aid or encourage the Chinese regime in any way.

Earth is ONLY outpost - we can solve challenges through population control, international cooperation, and pollution reduction

Trevors, 2009, J. (Trevors: University of Guelph and Adjunct Professor, a 28 year record of microbiology research, graduate and undergraduate teaching, consulting and editing/editorships has been achieved) '09 # Springer Science + Business Media B.V. “The Earth Is the Best Place to Live” – http://www.springerlink.com/content/p68867688844p083/fulltext.pdf

The already overpopulated Earth with several billion too many people, consuming and polluting and entangled in complex conflicts for limited resources has no rationale present and future within the current paradigm. There is no future in conflicts, wars, violations of basic human rights and needs, competition, discrimination, lack of public infrastructure, hunger and poverty all entangled within pollution and global climate change. The challenges/problems that we currently face can quickly turn into global crises (e.g. global warming, pandemics, overpopulation, food shortages) if the correct international actions are not implemented. **The Earth is our only outpost.** We can not travel quickly to other planetary locations and sustain life as we know it. Our correct choices are conservation, environmental protection, planned and managed human population control, international cooperation, evolve modern democracies and stable governments, education, basic human rights and needs and too all strive for the sanctity of life and humanity. The best way to halt total global pollution and climate change is to reduce total global pollution and the factors that cause climate change and overpopulation. **What a wonderful world it will be.**

Existential risks have no probability of happening

Holden Karnofsky, MAY 23, 2013, Possible global catastrophic risks, Give Well philanthropy, Holden Karnofsky is Co-Founder and Co-Executive Director of Give Well. Holden graduated from Harvard University in 2003 with a degree in Social Studies, and spent the next several years in the hedge fund industry. He co-founded GiveWell in mid-2007, blog.givewell.org/2013/05/23/possible-global-catastrophic-risks/

I consider the following to be the most worrying possibilities I’m aware of for reversing, halting, or substantially slowing the ongoing global progress in living standards. There are likely many such risks I’m not aware of, and likely many such risks that essentially no one today is aware of. I hope that readers of this post will mention important possibilities that I’ve neglected in the comments. In general, I’m trying to list factors that could do not just large damage, but the kind of damage that could create an unprecedented global challenge. More powerful technology – particularly in areas such as nuclear weapons, biological weapons, and artificial intelligence – may make wars, terrorist acts, and accidents more dangerous. Further technological progress is likely to lead to technology with far more potential to do damage. Somewhat offsetting this, technological and economic progress may also lead to improved security measures and lower risks of war and terrorism. A natural pandemic may cause unprecedented damage, perhaps assisted by the development of resistance to today’s common antibiotics. On this front I see technological and economic development as mostly risk-reducing, via the development of better surveillance systems, better antibiotics, better systems for predicting/understanding/responding to pandemics, etc. Climate change may lead to a major humanitarian crisis (such as unprecedented numbers of refugees due to sea level rise) or to other unanticipated consequences. Economic development may speed this danger by increasing the global rate of CO2 emissions; economic and technological development may mitigate this danger via the development of better energy sources (as well as energy storage and grid systems and other technology for more efficiently using energy), as well as greater wealth leading to more interest in – and perceived ability to afford – emissions reduction. Technological and economic progress could slow or stop due to a failure to keep innovating at a sufficient rate. Gradual growth in living standards has been the norm for a long time, and a prolonged stagnation could cause unanticipated problems (e.g., values could change significantly if people don’t perceive living standards as continuing to rise). Global economic growth could become bottlenecked by a scarcity of a particular resource (the most commonly mentioned concern along these lines is “peak oil,” but I have also heard concerns about supplies of food and of water for irrigation). Technological and economic progress could worsen this risk by speeding our consumption of a key resource, or could mitigate it by leading to the development of better technologies for finding and extracting resources and/or effective alternatives to such resources. An asteroid, supervolcano or solar flare could cause unprecedented damage. Here I largely see economic and technological progress as risk-reducing factors, as they may give us better tools for predicting, preventing and/or mitigating damage from such natural disasters. An oppressive government may gain power over a substantial part of the world. Technological progress could worsen this risk by improving the tools of such a government to wage war and monitor and control citizens; technological and economic progress could mitigate this risk by strengthening others’ abilities to defend themselves. I should note that I perceive the odds of complete human extinction from any of the above factors, over the next hundred years or so, to be quite low. #1 would require the development of weapons with destructive potential far in excess of anything that exists today, plus the deployment of such weapons either by superpowers (which seems unlikely if they hold the potential for destroying the human race) or by rogue states/individuals (which seems unlikely since rogue states/individuals don’t have much recent track record of successfully obtaining and deploying the world’s most powerful weapons). #2 would require a disease to emerge with a historically unusual combination of propensity-to-kill and propensity-to-spread. And in either case, the odds of killing all people – taking into account the protected refuges that many governments likely have in place and the substantial number of people who live in remote areas – seem substantially less than the odds of killing many people. We have looked into #3 and and parts of #6 to some degree, and currently believe that there are no particularly likely-seeming scenarios with risk of human extinction.

Framing Turn: Risk alarmism is more likely to cause existential risks than solve them

Nikola Danaylov, March 27, 2014, AI Risk Analysts are the Biggest Risk, Singularity Blog, Nikola Danaylov is the head editor and writer for Singularity Blog, he completed an HBA in Political Science, Philosophy & Economics at the University of Toronto followed by an MA in Political Science at York University - he is the author of several publications on future tech and ethics including Hacking Destiny: Critical Security at the Intersection of Human and Machine Intelligence.”https://www.singularityweblog.com/ai-risk-analysts-are-the-biggest-risk/

People who think AI is an existential risk need to carefully reconsider their beliefs. Ironically the only futuristic threat to our existence is the fear of AI. Expecting AI to be dangerous in any way is utterly illogical. Fear of AI is prejudice. Worrying about AI danger is a paranoid fantasy. The fear of AI is xenophobia. Immemorial human fear of differences is the only problem. Persecution of people based on different gender, sexual orientation, or skin colour demonstrates how humans fear differences. It is this fear that makes people anxious about foreigners. People often fear foreign people will steal jobs or resources. Xenophobic people hysterically fear foreigners will murder innocent people. This is the essence of AI fear. AI is the ultimate foreigner. Surely risk analysts should consider the possibility they are the risk? Sadly they seem blind to this possibility. They seem unable to imagine how their response to hypothetical risk could create the risk they were supposedly avoiding. They seem incapable of recognising their confirmation bias. The problem is a self fulfilling prophecy. A self fulfilling prophecy can be negative or positive similar to a placebo or a nocebo. When a person is expecting something to happen they often act unwittingly to confirm their fears, or hopes. The predicted scenario is actually manifested via their bias. Expectations can ensure the anticipated situation actually happens. It can be very ironic regarding fears. I think there’s no rational reason to suspect AI will be dangerous. The only significant risk is the fear of risk. False assumptions of danger will likely create dangerous AI. Actions based on false suppositions of danger could be very risky. Humans are the real danger.

Framing - It would take at least half a century to minimally colonize space. This means short term impacts should take priority

How long did it take to build New York? California? France? Even given ample funds the first settlement will take decades to construct. No one is building a space settlement today, and there are no immediate prospects for large amounts of money, so the first settlement will be awhile. If Burt Rutan's prediction of affordable orbital tourism in 25 years is correct, however, it's reasonable to expect the first orbital colony to be built within about 50 years.

Turn: Colonization will lead to alien contact - aliens will pillage earth for resources and kill the humans that remain

The aliens are out there and Earth had better watch out, at least according to Stephen Hawking. He has suggested that extraterrestrials are almost certain to exist — but that instead of seeking them out, humanity should be doing all it that can to avoid any contact. The suggestions come in a new documentary series in which Hawking, one of the world’s leading scientists, will set out his latest thinking on some of the universe’s greatest mysteries. Alien life, he will suggest, is almost certain to exist in many other parts of the universe: not just in planets, but perhaps in the centre of stars or even floating in interplanetary space. Hawking’s logic on aliens is, for him, unusually simple. The universe, he points out, has 100 billion galaxies, each containing hundreds of millions of stars. In such a big place, Earth is unlikely to be the only planet where life has evolved. “To my mathematical brain, the numbers alone make thinking about aliens perfectly rational,” he said. “The real challenge is to work out what aliens might actually be like.” The answer, he suggests, is that most of it will be the equivalent of microbes or simple animals — the sort of life that has dominated Earth for most of its history. One scene in his documentary for the Discovery Channel shows herds of two-legged herbivores browsing on an alien cliff-face where they are picked off by flying, yellow lizard-like predators. Another shows glowing fluorescent aquatic animals forming vast shoals in the oceans thought to underlie the thick ice coating Europa, one of the moons of Jupiter. Such scenes are speculative, but Hawking uses them to lead on to a serious point: that a few life forms could be intelligent and pose a threat. Hawking believes that contact with such a species could be devastating for humanity. He suggests that aliens might simply raid Earth for its resources and then move on: “We only have to look at ourselves to see how intelligent life might develop into something we wouldn’t want to meet. I imagine they might exist in massive ships, having used up all the resources from their home planet. Such advanced aliens would perhaps become nomads, looking to conquer and colonise whatever planets they can reach.” He concludes that trying to make contact with alien races is “a little too risky”. He said: “If aliens ever visit us, I think the outcome would be much as when Christopher Columbus first landed in America, which didn’t turn out very well for the Native Americans.” The completion of the documentary marks a triumph for Hawking, now 68, who is paralysed by motor neurone disease and has very limited powers of communication. The project took him and his producers three years, during which he insisted on rewriting large chunks of the script and checking the filming.

Ongoing cooperation with China is not fruitful – no reason to expect plan will change

The U.S. and Chinese governments already discuss satellite collision avoidance and conduct joint research into greenhouse gas monitoring, severe weather monitoring, space weather and climate science. This cooperation seems to produce little fruit. It certainly has not affected Chinese behavior vis-à-vis its relationship with the United States. Indeed, last fall, hackers in China attacked a U.S. partner to these cooperative relationships, the National Oceanic and Atmospheric Administration, leading the agency briefly to stop making satellite weather data available to the public. If this is what it means to cooperate with China in space, the United States is better off without it.

Turn: Cooperation ends up costing more money – makes cooperation less likely

The same rationale applies to funding. Past cooperative efforts with geopolitical competitors has left the United States footing a substantial amount of the bill. Cooperative efforts with the Soviet Union and then the Russian Federation have been and continue to be funded substantially by the United States with the other party to the cooperative agreement reaping most of the benefit. Projects such as the Apollo/Soyuz rendezvous mission during the Cold War and the current engagement with the international space station are examples where the United States has provided a disproportionate amount of funding. The current arrangement with the ISS in particular has seen the Russian Federation receiving substantial economic benefit from funding of modules, revenue generated from commercial activities, including space tourism, and revenue received from ferrying of NASA astronauts. It is conceivable that China would reap a similar economic benefit to the detriment of the United States in cooperative outer space activities. The likelihood is great that China would insist that any arrangement entered into be funded disproportionately by the United States. This in turn would take away from other programs, inflate the national deficit and even require more borrowing from China, which would have a cumulative effect on the national and economic security of the United States with little or no benefit.
